WANTED, greenhouse assistant with experience in watering, ventilating, potting, etc., cut flowers and plants. Retail commercial place; eastern New York. Wages $25.00 and board per month. Give references and state experience. Address M. G., care Florists' Exchange.

WANTED at once, young or middle-aged man to travel on the road, soliciting orders for hardy nursery stock and landscape work. Will pay salary and expenses according to knowledge of business and executive ability. Situation permanent. West Side Nurseries, Worcester, Mass.

WANTED, three growers, one for carnations, two for roses; one must be an American Beauty specialist. None but first-class men need apply; good wages; in the most up-to-date establishment in America. Dale Estate, Brampton, Ontario, Canada.

BUSINESS OPPORTUNITIES

FOR SALE on easy terms at Secaucus, N. J., 40 minutes from Hoboken Ferry; two desirable places for florists, plot 200 x 600 feet with large house, and carriage house, with stable. Plot adjoining 175 x 600 with house, carriage house and barn. Address J. N. Kip, 211 Greenwich Street, N. Y.

TO RENT—At Woodside, L. I., within three miles of 34th street ferry, my entire greenhouse plant consisting of about 17,000 feet of glass. All A 1, heated with seven Hitchings boilers. A visit for inspection will convince you it's a snap. Alex. S. Burns, Woodside, N. Y.

Clear Cypress Hot Bed Sash

3 ft. x 6 ft. x 1½ in. for three rows ten-inch glass. Iron Rod for strengthening; leaded joints, any quantity. Write for special prices.

C. W. LUMB & SON, Poughkeepsie, N.Y.

Mention the Florists' Exchange when writing.

For Sale or Exchange 50,000 Sen. Dunlap Strawberry plants, the best strawberry introduced in ten years; ten other varieties 50 cts. per 100; $3.00 per 1000. Want rooted cuttings or small potted Geraniums, Chrysanthemums, Pinks, Bedding Plants, Pansies or offers. **J. W. Crowell, 479 Garden St., Hartford, Ct.**

Mention the Florists' Exchange when writing.

BUSINESS OPPORTUNITIES

LARGE greenhouses, well stocked, doing good business, house and ten acres of land, in large city in northern Ohio. Address L. L., care Florists' Exchange.

FOR SALE or to lease, six acres of land at Secaucus, N. J., suitable for florist; 30 minutes from all ferries; cars pass the place. Address Wm. H. Huber, Secaucus, N. J.

FOR SALE, well paying florist establishment at Grandview-on-Hudson, N. Y. Three greenhouses 20x130; seven acres land; nine-room residence; everything in fine condition. Address N. L., care Florists' Exchange.

FOR SALE.—Will sell cheap for cash, a plant of 18,000 feet of glass, in violet district on Hudson River; suitable for carnations or violets. Address K. V., care Florists' Exchange.

FOR RENT or sale, three greenhouses, 24x200 ft., ¾ span; propagating house 100 ft.; potting shed; steam heat; city water; dwelling and stable, at Highland, opposite Poughkeepsie, N. Y. Immediate possession. Joseph Wood, Spring Valley, N. Y.

CORNER of Bedford Ave., Brooklyn, established about 18 years, averages yearly about $3,000.00; rent $25.00, living apartments attached. Rare opportunity for the right party. Must sacrifice on account leaving city April 1. Stand any investigation. Address N. E., care Florists' Exchange.

FOR SALE—Old established florist business, 4½ acres of ground, 10 greenhouses, cold frames, 7-room house, barn, etc. Large cemetery opposite. Thirty minutes from New York City. Trolley cars pass place; 36 years in present location. Entire property and business. Large field for wholesale and retail trade. Call and inspect, or address Mrs. C. M. Hutchinson, Elizabeth, N. J.

A Business Opportunity

20,000 feet of glass, well stocked and in good condition; also a city retail store with a well established, profitable trade, for sale at a bargain.

Owner would prefer to sell the houses and keep the store, taking, if desired, the output of the houses; or would sell an interest in the business to a competent, pushing grower.

This is an opportunity for a grower to establish himself near to one of the best markets in the country, or for a storeman and a grower to mutually acquire, on favorable terms, a desirable plant and a store with an established, profitable trade.

This is a proposition that will bear careful investigation. Address,

FRANK HUNTSMAN, Cincinnati, O.

Mention the Florists' Exchange when writing.

FOR SALE.

Established retail flower store in World's Fair City, fully equipped and doing a paying business. Fullest investigation invited, best of reasons for selling. Must be disposed of at once. Price moderate.

ROBERT F. TESSON,

ST. LOUIS, MO.

Mention the Florists' Exchange when writing.

A. T. De La Mare Ptg. & Pub. Co.

Limited.

P. O. Box 1697, New York.

Heating Problems.

(78) What number of 1½-inch pipe ill be required to heat a house 32 feet ide, back wall 4½ feet, front 4½ feet, vo of which is glass; 12 feet to ridge; ne end glass, the other attached to ned, with steam to 55 degrees, the utside temperature going down to 10 egrees sometimes? S. BROS.

—Use 12 to 14, according to the ex- osure and construction of the house. L. R. T.

(79) Which is the better plan to lopt with hot-water heating? Place ne boiler in pit six feet in ground, nder floor of potting shed. The flow pes rise to highest point over the iler, then run into greenhouse over- ad on purlin to farthest end, return- g on posts on the walls. This is the erhead system. Another way: Place e boiler in the same position; highest int over boiler; the flow pipes rise e foot above doorway, entering eenhouse, flows drop in the shed and n on the posts to farthest end, re- rning back on posts; that is, flows d returns on each side; also returns each side. This is open tank system. F. W. H.

—The higher the pipes above the iler the more rapid the circulation. owever, as the case is stated, the cir- lation with all of the pipes on the ll posts should be very satisfactory. ith raised benches it is desirable with ny crops to have the return pipes derneath for bottom heat. L. R. TAFT.

80) My heating plant does not work ht. My houses are 200 feet long, built t Summer; boiler pit, 6½ feet deep; e lowest return, 24 or more inches ove the water-line. A 2-inch flow goes the houses on posts under iron gut- , with about 8-inch fall; returns with ine of 1¼-inch pipe (two sets, one der each gutter), returning with out 15-inch fall to lower end of use; then dropping with swivel nts and air cocks to a 1¼-inch re- n (each coil of four 1¼-inch pipes) the boiler, where there are two 1¼ l two 1½-inch pipes entering the ler, with checks, to carry the con- nsation for the whole system. On north side I have a 1¼-inch flow ning back with four 1¼-inch returns, 200 feet. On the south side one 1¼- h flow and three 1¼-inch returns. rst had only a 3-inch main in boiler d, but replaced it with a 6-inch, ich works better. We have had no l weather to test it yet—want about legrees above. I do not think I have ugh flow through the houses; or uld it be better to cut the whole ng in half, making two 100-foot sec- ns with a 2-inch pipe for each 800 , bringing the return from the mid- of the house with a 1¼-inch return oiler? Are the returns large enough around? The area of those going the boiler is nearly as large as a ee-inch pipe. I was thinking of ing out of the coils two 1¼-inch e returns and making a flow for ne, instead of buying two-inch pipe. uld that make the system work? I nk my boiler is low enough, as there over two feet drop to water line. I have to put in more flow, or extra , and make it into 100-foot sec- s. At my old place the pipes worked right, but they were only 100 feet , boiler the same depth, but the ch flow only had 800 feet instead of feet. W. H. V.

The only trouble with the circula- seems to be that the flow pipes are small. The simplest way of cor- ing the difficulty will be to run ther two-inch flow pipe for each . Another way would be to use the sent flow pipe to feed a coil of four s, and then change two of the 1¼- returns, so that they can be used flow pipes, each supplying one re- . L. R. TAFT.

Philadelphia.

dfrey Aschmann has a very large rtment of Easter stock this year n, in the best of condition. He is icularly strong in azaleas and s, and the many testimonials he received are splendid evidence of quality of the goods he handles.

DEAN'S SYSTEM OF GREENHOUSE HEATING

By MARK DEAN

DO YOU WANT TO KNOW

HOW
- To determine the area of any greenhouse?
- To tell the amount of radiation necessary to heat the same?
- To place the heating pipes to best advantage?
- To figure what the pipes and fitting will cost?
- To set up a boiler?

DEAN'S SYSTEM OF GREENHOUSE HEATING is the name of a new book which will fill a long felt want, because it has tables all figured out giving the amount of radiation and number of pipes necessary for greenhouses of all sizes, formulae for obtaining different temperatures, radiation per lineal foot of pipes of various sizes or the number of feet of radiation in any number of feet of pipe, list prices of pipe, pipe fittings, etc., besides much other valuable information. Handsomely bound. By mail postpaid $2.00.

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

Vol. XV. No. 14 NEW YORK, APRIL 4, 1903 One Dollar Per Year

10,000 POTS OF

LILIUM LONGIFLORUM

FOR EASTER.

We have an exceptionally fine lot of these, and plants are in perfect condition, ith fine, healthy foliage, and A No. 1 in every respect, averaging from four to ght buds each. We are now booking orders for Easter delivery, or earlier at ie rate of

12c. per Bud or Flower.

CUT LILIES AT SAME PRICE.

In ordering please state whether plants in pots or cut lilies are wanted.

Customers at a distance wishing to procure a supply will find it safer to order rly, just before the flowers open, as plants can then be shipped cheaper and with reater safety. You will then have the plants on hand and avoid the rush at the st minute. A great many of our customers order in this way, and find it a decided lvantage. We can ship at any time now plants selected so that they will just come to bloom in nice shape the week before Easter.

We should be glad to have buyers from near-by points call at our Scarborough reenhouses and inspect the stock. Plants can be selected and laid aside and reerved at any time and delivered when wanted.

We have also an Exceptionally Fine Stock of

icus Elastica, Kentias, Boston Ferns, Araucarias, Large-sized Latania Borbonica, for Decorating, Etc., Etc.

SEED TRADE REPORT

AMERICAN SEED TRADE ASSOCIATION

Walter P. Stokes, Philadelphia, President; C. N. Page, Des Moines, Iowa, Vice-President; C. S. Burge, Toledo, Ohio, Second Vice-President; S. F. Willard, Wethersfield, Conn., Secretary and Treasurer; A. N. Clark, Milford, Conn., Assistant Secretary.

European Notes.

There has been quite a falling off in trade lately, owing, doubtless, to the continued wet and rough weather which has prevented any advancement of outdoor operations. No check has yet been put on the forward growth of all vegetable life, and one is deluged with reports on the unusual earliness of plants this season, early cabbages having been cut and put on the market many weeks in advance of ordinary years.

Hollanders are finding small shortages in most varieties of their bulb crops, but seem confident that prices will remain low except, perhaps, in the case of a few sorts of forcing tulips.

EUROPEAN SEEDS.

Western Sugar Corn Seed.

Editor Florists' Exchange:

Under the heading of "Sugar Corn Seed," in your issue of March 14, D. Landreth & Sons, of Philadelphia, take exception to an article that had previously appeared in the columns of your paper, questioning the truth as to the apparent great shortage of sugar corn seed this season. They claim that the article was "seriously misleading," and then indulge in a tirade against Western sugar corn seed, making the claim that "there is a great deal of Western sugar corn seed in the market being sold for pig food," and that it is unfit even for this purpose, "being mouldy," etc.

As the company I represent makes a special business of contracting to grow sugar corn seed to a quite large extent, and as there are others, also located here, engaged in the same business who occupy a high standing in the seed trade, I cannot but take exception to and resent the broad charges contained in the article written by the firm above named.

It would be a matter of gratification to all concerned if Messrs. Landreth would kindly confirm their charge, specifying the quantities of this "pig food" sugar corn seed that they claim has flooded the market, and make publicly known the growing stations from which same has been shipped this season.

While I have the profoundest respect for the venerable house of Landreth, and, under ordinary conditions, would accept their statements as "Gospel truth," in this case I must enter a protest against this indiscriminate and wholesale charge on their part against Western sugar corn seed.

It is an absolute fact that the little village of Waterloo, Neb., supplies the seed trade of the entire country, East as well as all other sections, with fully 75 per cent. of the entire world's product of this kind of seed. Furthermore, I will make the statement, which cannot be denied, that there has not been one single bushel of mouldy sugar corn seed contained in the entire several hundred carloads of this seed shipped from this locality this season.

While refuting the unwarranted charges made by Messrs. Landreth against the quality of Western sugar corn seed, it is amusing to the casual observer to note the contradictory element contained in their criticism.

They criticise the article previously referred to as "seriously misleading," yet with apparent "malice aforethought," and for reasons that are imperceptible, which in legal phraseology would be termed "immaterial, irrelevant, and incompetent," deliberately adopt the same manner of criticising the Western sugar corn seed they so vigorously denounced as "seriously misleading" in the article mentioned.

They criticise an article as being "seriously misleading," and in the very next paragraph make charges which cannot be substantiated, and which are even of a more "misleading character."

"Consistency thou art, indeed, a jewel!" "First cast out the log in thine own optic, before thou pluckest out the tiny sliver in thy neighbor's eye." And don't knock; every knock is a "boost," you know, and does not look well to the public as coming from one engaged in business in the City of Brotherly Love.

Nursery Department

AMERICAN ASSOCIATION OF NURSERYMEN

Charles A. Ilgenfritz, Monroe, Mich., President; D. S. Lake, Shenandoah, Ia., Vice-President; George C. Seager, Rochester, N. Y., Secretary; C. L. Yates, Rochester, N. Y., Treasurer.

There are at the present time about 422 acres of growing nursery stock in Connecticut. Fruit stocks and hardy ornamental plants are included.

THREE RIVERS, MICH.—R. M. Kellogg Plant Company is the name of the new firm to succeed Mr. Kellogg in the nursery business.

ATLANTA, GA.—At the meeting of the State Board of Entomology, held March 19, in Macon, P. J. Berckmans, president of the State Horticultural Society, was offered the position of assistant State entomologist to succeed Professor W. F. Fiske, resigned. Mr. Berckmans has not accepted the position as yet, but probably will.

EVERGREEN SEEDLINGS. — The Board of General Appraisers at New York rule that evergreen seedlings are properly dutiable at the rate of $1.00 per thousand and 15 per cent. ad valorem, under the provisions of paragraph 252, act of July 24, 1897; adding "a seedling is germinated from seed, as distinguished from a plant propagated from a stock or cutting, irrespective of whether or not it has been transplanted." The contention of the importers, in brief, was that a tree propagated from a seed, after having been transplanted, ceases to be a seedling and becomes a tree; and that the term "evergreen seedling," as used in the tariff act, for that reason is applicable only to those seedlings which have not been transplanted and which remain in the locus of germination. On this subject there exists in the trade quite a difference of opinion. Among the evidence submitted to the appraisers was a letter from F. E. Olmstead, acting chief of the Bureau of Forestry of the United States Department of Agriculture, Washington, D. C., in which it is stated:

"I do not know of any acknowledged classification of seed bed and nursery evergreen stock. My opinion and practice in the matter are as follows: One, two, and three-year-old plants in the seed bed are seedlings; one, two, and three-year-old stock transplanted from seed bed to nursery rows are transplanted seedlings up to four years; nursery stock older than four years, transplanted any number of times in the nursery, are nursery trees."

The appraisers hold that there is no uniform and general commercial usage which changes the designation of a seedling which has been transplanted from that of a seeding to that of a tree.

Horticultural Notes.

Teas' Japan catalpa is a handsome sort, flowering profusely when but a small bush. All catalpas are worthy of prominent places on lawns. The smaller growing ones display their flowers better than those of larger growth. Even the common one of the Middle States, C. bignonioides, because of its spreading, rounded growth, is a favorite park tree.

Fuchsias rooted now and grown on indoors until the weather is warm enough to plant them out, flower all Summer long if placed in the shade. Near some building, say on the eastern side, where but an hour or two of sunshine reaches them, is just the situation they desire.

In many places planting should be well started by now. Get in very early the Japanese snowball, the larch, Pyrus japonica, bush honeysuckles, and other shrubs and trees known to push early. Weeping willow is another to add to the list, as is the lilac.

The Winter season now closing has proved again the value of trees and shrubs with ornamented twigs. Particularly beautiful has been the Fraxinus aurea, the golden-barked ash. As with all this class, the more vigorous the growth the deeper the color of the bark; hence the hint to prune the branches closely in Spring to get strong shoots.

The dwarf mountain pine, Pinus Mugho, is the very thing to plant where a spreading evergreen of upright character is required. It fits a place hardly any other evergreen could fill. Some botanists incline to think this pine is but a variety of the Scotch. It is sure that a bed of seedlings of it will often give more than one plant apparently a true Scotch.

A correspondent asks me if the Araucaria imbricata will live out in Virginia. I think not. In Europe it endures 20 degrees of frost uninjured, but there it does not get the bright sun in Winter it would have here. Just how far North one may be growing I do not know.

Crataegus Pyracantha.

Along with the several species of cotoneasters, the C. pyracantha is a favorite evergreen, half-climbing shrub, much used in the planting of low walls in Europe. Though it is quite hardy in the vicinity of New York, it is rare to find it in collections, and still more so to find it used as it is in Europe, for the covering of low walls. That it will do well here, I would mention that a short time ago I saw a beautiful specimen trained to the wall of a dwelling. It was about four feet in height, well branched, and covered with its bunches of orange-colored berries.

Referring to cotoneasters, there are many species of these that succeed well here, and their pretty evergreen leaves, as well as their red berries, make them valuable.

Both the Cratægus pyracantha and the cotoneaster may be raised from hard or soft wood cuttings, or by layering. Though slow rooting, they are fairly sure to grow, with ordinary care afforded them.

Transplanting Evergreens.

It is not uncommon to find in print the advice to defer the planting of evergreens in Spring until growth is about starting. Those who plant largely, and plant for profit, do not so advise. Nurserymen have to look closely to that which will bring them the best returns, and we find these men planting their evergreens in Spring as soon as they can get them into the ground. It has occurred to me that the idea that late planting is better than early may have originated because of the fact that almost all evergreens push later in Spring than deciduous trees. Hence planters who have much work to do are apt to take in hand deciduous material first, and evergreens later. In this way persons observing the late planting of evergreens may have assumed it was the best time for them. It is very sure that an early planting of evergreens will bring better results than later work would. When deferred until the buds are starting, the heat of Spring is not far off. The plants are not settled in their new positions and are not nearly in as good condition to meet the heat, with probable dryness, that they would have been if planted a month earlier.

I am writing this March 25, and could point now, to anyone in this vicinity, to whole blocks of pines, Arbor vitæs and miscellaneous evergreens, the planting of which has been completed two weeks ago; and planting of the same class of stock is still going on. These will thrive very much better than if deferred till later; for the buds are yet entirely dormant. A great deal more care is required to win success with evergreens when they have commenced to grow.

Evergreens shipped a distance, whether early in the season or late, rarely thrive as well as deciduous ones under the same conditions. They cannot "put up" with as much roughness as the other class, and when out of the ground a good while, full success with them is hardly attained. When of a class having fibrous roots and a ball can be secured with them, it is a different matter. The nurseryman who takes extra care in shipping evergreens will find it to his profit.

Many foreign houses who ship here have found the value of the ball of earth, and take great pains to secure it to each plant. As ocean freight is by bulk, and not by weight, the ball adds but little to the cost; and the shipper and receiver are both benefited by it.

JOSEPH MEEHAN.

SPECIMEN PLANTS OF

CALIFORNIA PRIVET

Several thousand large, well furnished plants, for grouping and massing, from 4 to 7 feet high. They have been grown with ample space and have been headed back a number of times; hence are dense and well formed in brief they were grown especially for the uses indicated. 75,000 CHOICE PERENNIAL PHLOX 75,000

ONE OF OUR LEADING SPECIALTIES

Strictly first-class varieties, distinct and decided colors; strong, field-grown plants that were cut back and potted up into three-inch pots late in the fall, with from 3 to 6 eyes, that will make a better display of flowers than plants dug from the field; this stock must not be confounded with small winter propagated plants, such as are usually sent out.

Athis, deep pink, overlaid salmon, crimson eye.
Andreas Hoffer, a fine early white.
Aquillon, carmine rose, shaded salmon, crimson eye.
Bridesmaid, pure white with large crimson eye.
Beranger, white, suffused pink, crimson eye.
Blanc Nain, large dwarf white.
Bouquet Fleur, white, with deep rose eye.
Crystal Palace, white, with lilac markings and center.
Cross of Honor, magenta, bordered white, in the form of a Maltese cross.
Cyclon, white, suffused rosy lilac, dark rose eye.
Champs Elysee, fine rich purplish crimson
Duguesclin, white with dark crimson center
Eclaireur, purplish crimson, very bright, with light halo.
Esclarmonde, lilac suffused white, deep rose-colored eye
Etoile du Nord, purplish crimson.
Eugene Danzenvillier, lilac with white edge and center.
Faust, pure white with cherry-red eye.
Henry Murger, white with bright rose eye.
Jeanne D'Arc, a fine late white.
Jules Finger, tender rose with deep rose eye.
Lilipot, bright magenta with crimson eye.
La Fondre, deep purplish crimson.
La Nuit, deep purplish crimson.
La Vague, soft rosy pink with red eye
Lothair, salmon-red with carmine eye.
Mlle. Marie Kuppenheim, a good dwarf, pure white.
M. Marey, salmon rose with deeper center.
Marquis de St. Paul, deep rose, overlaid salmon.
Michael Cervantes, pure white with bright red eye.
Mrs. Dora Umgeller, rich deep rose, a strong variety.
Moliere, salmon rose, deep rose eye.
Nettie Stewart, pure white, occasionally marked rose.
Ornament, rosy magenta with crimson eye
Professor Schlieman, salmon rose with carmine eye
Peach Blow, delicate pink with white markings.
Pantheon, fine deep salmon rose, free and effective.
Pacha, deep rose with bright eye.
P. Bonnetin, magenta overlaid salmon.
Robert Werner, tender rose with deep rose eye.
Semiramis, purplish magenta.
Simplon, white suffused lilac, dark rose center.
Sylphide, light rose and white, with deep center.
Schlossgartner Reichenau, bright rose, dwarf and free.
Sunshine, salmon pink with deep red eye.
Thebaide, dwarf salmon red with crimson eye.
Wm. Muhle, salmon pink with dark crimson eye.
Zouave, largest purplish crimson, red eye.

Any of the above varieties, 75c. per doz.; $6.00 per 100; $50 per 1000

THREE CHOICE RED PHLOX VARIETIES THAT ARE ALWAYS SCARCE

COQUELICOT, a fine pure scarlet with deep carmine eye
JOCELYN, bright salmon red, very brilliant
MATADOR, Bright orange scarlet, cherry-red eye
$1.00 per doz.; $8.00 per 100

Canadian News

Hamilton.

News Notes.

There will certainly be a large Easter trade in this locality. Never before has a finer lot of flowering stock been seen. At E. G. Brown's there is the usual fine display of flowering and foliage plants; everything looks neat and businesslike. Geo. N. Sones has also a splendid display. His cinerarias are especially fine. Walter Holt has had some fine stock; he has cleared out a good portion already. Harry Marshall finds room for some good material for Easter, although he is pushed for room by his contract for supplying the city parks. I saw some azaleas and rhododendrons, well grown, too. Webster Bros. have some good palms and ferns; otherwise they are sold out of Easter stock. Townsends are preparing for a largely increased business. They report funeral work as somewhat slack lately.

The Foster estate will likely be sold out. There will be little if any dividend for the creditors.

Florists' Club.

As there is at present nothing special on the boards for next meeting it is likely that the gathering will be largely of a social nature. President Turner invites everyone to the meeting to limber up a little; he says it will increase your capacity for handling a big Easter trade.

The scale of prices on bedding plants prepared by the Club, has been printed and distributed to the various growers, and the consensus of opinion is that it will be adhered to, as the prices named are only fair and reasonable, and can be just as easily secured as lower rates.

Jas. Dunlop, of St. Catharines, H. L. anzen, Berlin, and Mrs. A. L. Jack, Montreal, were among the visitors for the week. BEAVER.

London, Ont.

The Gardeners' Association of London held its first meeting of the "educational series" Tuesday evening, March 24, in the lecture hall, Duffield block, Wm. Gammage in the chair. There was a good attendance despite the inclement weather. Rev. Dr. Bethune, the noted entomologist, gave an interesting and instructive address on the depredations of the cabbage worm and onion maggot, and remedies to be applied for their destruction.

F. Darch gave a very earnest and stirring address on benefits to be derived from an organization of this kind.

The Gardeners' Association is much indebted to Messrs. Gammage and Darçh for the keen interest they take in helping along the work in hand.

OTTAWA. We have been having very favorable weather for bringing out backward stock, and the helping along of roses and carnations. It looks as if the cut of both of these staples will be fair, especially roses. Bulbous stock will be very fine; lily of the valley good and plentiful, violets, not abundant.

The plant stock is good; some azaleas are a little early and a good many lilies are behind.

Business has been fairly good, carnations having the call.

Mr. Kapteyn, the last of the bulb contingent, has come and gone. He was proud to see his stock of Gladstone spiræa, which this year is very fine, away ahead of other varieties. E.

ASPARAGUS PLUMOSUS

Fine bushy plants, 3½ in., $10.00 per 100.
Araucaria Excelsa, 5 in., fine $7.50 per 10.
Holly Fern, 2¼ in., $4.00 per 100.
Kentia Forsteriana, 4 in., $3.50 per 10.
Crimson Ramblers, 2¼ in., $4.00 per 100.

Headquarters for Shrubs and Perennials

Webster Bros., Plantsmen. Hamilton, Canada

Mention the Florists' Exchange when writing.

TORONTO.—Business continues good, with a fair supply of both plants and cut flowers. The quantity of bulbous stock is diminishing somewhat, but roses and carnations are more plentiful. Unless there is a large stock of lilies in reserve, they will not be overplentiful for Easter. Lily of the valley is in good supply, and there are a great many azaleas offered. Most of the latter are rather ripe. Quite a few Azalea mollis are around, but they do not sell very well. There are also some very fine light-colored rhododendrons offered, and a few good genistas. Most of the bougainvilleas seen are not quite forward enough for Easter. Good ferns are rather scarce. The warm weather of two weeks ago put a good many violets out of business; not many are grown outside, or in frames, at present. The weather has been colder again, and trees and shrubs have received a much needed check, as a few more warm days would have brought a good many of them into leaf.

Our seed stores are all exceptionally busy, and the rush for Spring planting has begun in earnest. The tulips and other bulbous stock in the city parks are all well up and looking very well. T. M.

Boston.

Change of Market Stand.

On Monday April 6, the Boston Co-operative Flower Growers' Association removes to its new market on Columbus avenue near Berkeley street. The choice of stalls is to be had on Saturday of this week after the order of the last auction sales. The new market will contain one hundred and fifty-two stalls, with a chance to increase the number, and each stall will give sixteen square feet of space in place of nine square feet, as at the old place. The location, which is very near the center of the retail district, should prove an ideal one, and it will surely afford better room and accommodation for handling the immense amount of stock which is now brought in daily and especially for Easter week.

News Notes.

Thomas A. Cox, of Dorchester will have as fine a batch of hydrangeas, in medium sizes, for Easter as is to be found in this vicinity, as well as a very fine lot of heaths in good salable sizes. Daybreak carnations here, in color, size, stem and profusion of bloom, is the equal if not the peer of some of the newer sorts.

Another son arrived at the P. Welch home in Dorchester on Friday of last week.

McCarthy's auction room is filled with a very fine lot of Easter lilies and Crimson Rambler roses.

F. J. NORTON.

St. Louis.

Club Meeting.

The next meeting of the Florists' Club, on April 16, which will be held at Belleville in the Commercial Club rooms, promises to be of great importance to the members, and a large attendance is expected. Two essays will be read, one by Emil Schray on "Forcing Hydrangeas for Easter," another by Fred Ammann, of Edwardsville, Ill., on "Experience With Short-Span Greenhouses." Mayor Halstead, at whose invitation the club is going to Belleville, says those who miss the meeting will regret it very much, as preparations are now being made by the local florists, assisted by the Mayor, to entertain those present in royal style. A fine lot of cut roses is promised for the exhibition at this meeting.

About Town.

Rudolph J. Mohr spent the past week in Chicago, and had a good time with the craft at that place.

R. F. Tesson is now living in town, as he will soon turn over his place to the World's Fair Commission for propagating purposes.

The store of the late firm of Ellison & Tesson, on Grand avenue is for sale. It is now in charge of Mr. Tesson's brother.

Carl Beyer took a run over to Belleville last Sunday to visit some of the craft at that place. He wound up at the bowling alleys, with E. W. Guy as a partner.

Adolph Brix, of North St. Louis, will sail in a few weeks for Germany, his old home, to spend the Summer there.

ST. PATRICK.

Coal Didn't Bother Us!

We are Headquarters for

Easter Plants

Blooming Easter Week or Before.

I have an immense stock of the finest and choicest in Philadelphia, and in such quantities that exceed anything that I have ever offered before. Several new greenhouses have been added to our large establishment, and these, with many hotbeds, are devoted to the entire cultivation of Easter plants alone; therefore I will be prepared to fill all orders if sent in time as far as the supply will reach.

AZALEA INDICA.

Have two houses 20 x 100 feet full of these choicest and most favorite Easter plants. Most of my customers already know that I am agent for a large concern in Ghent (Belgium), O. Vanden Plas; therefore I can offer you plants at first hand and not through the middleman. In the interest of my customers I go there every year if possible and select my stock personally for the American market. **Notice:** My Azaleas as soon as they arrive from abroad are planted in pots and pinched out as often as it is necessary and taken care of all winter, while some florists place their plants in hot-beds or frames without pots until sold.

MME. VAN DER CRUYSSEN is a rare article this Easter, but as a novelty I can offer about 700 (6-in. pots) of the finest middle-sized plants of this variety, and these are the finest you ever laid your eyes on, as round as an apple, covered with buds. Price, 75c., $1.00, $1.25 each. Specimen plants, 10 and 11-in. pots, $4.00 and $5.00 each.

Other choice varieties in double white, we have Niobe, Bernhard Andreas alba and Deutsche Perle. In pink we have Simon Mardner, Dr. Moore, Memorier, D. L. Van Houtte, Paul Weber, etc. In variegated we have Empress of India, Prof. Walters, Vervæneana, and about eighteen more best varieties of all shades and colors, too much to mention. Price, 6-in. pots, 60c., 75c., 85c., $1.00 and $1.25 each. Specimens, 7-in. pots, $1.50 and $1.75 each.

AZALEA MOLLIS, a novelty when in bloom, 6-in pots, 60c. and 75c.

SPIRÆA COMPACTA, 6-in. pots, $3.00 per dozen (my own importation, fine, bushy plants).

CINERARIA HYBRIDA (perfect jewels), all shades and colors, full of buds and flowers, 6-in. pots, $3.00 and $4.00 per dozen; specimen plants, $5.00 per dozen, smaller plants, 5 and 6 in. pots, $2.50 per dozen.

DAISIES, white and yellow, 6-in. pots, $3.00 per dozen.

LILIUM HARRISII. Have about 2500 of these (H. F. Michell's selected bulbs, 7 x 9, at $120 per 1000); height from 15 in. to 36 in., 5 to 12 buds to the plant, at the rate of 10c. per bud. Lilies are scarce; other plants must accompany the order.

HYDRANGEA OTAKSA (pink). Have a large housefull in tip-top condition, better than ever; strong plants, 6-in. pots, $4.00, $5.00, $6.00 to $9.00 per dozen. Specimens, 7-in. pots, $1.00, $1.25 and $1.50 each (a few white ones at $3.00 per dozen).

BEGONIAS. Pres. Carnot, 5-in. pots, $2.00 per dozen; 6-in. pots, $3.00 per dozen.

BEGONIA Metallica, 6-in. pots, very large and bushy, $4.00 and $5.00 per dozen.

BEGONIA Vernon (dark red), a new variety from Switzerland, 6-in. pots, full of flowers, $3.00 per dozen.

BEGONIA Vernon (dark red), 4-in. pots, $1.50 per dozen.

BEGONIA, Mixed, 4-in. pots, $1.20 to $1.50 per dozen.

HYACINTHS, all named varieties, from first-sized bulbs of my own importation, all fine shades, $10.00 per 100.

TOURNESOL TULIPS (double red and yellow striped), best double Tulips in existence, sell at sight, three bulbs in a 4-in. pot, $1.50 per dozen pots.

DAFFODILS (Von Sion), double-nosed, three bulbs in a 5-in. pot, unusually fine this year, $2.00 per dozen pots.

Mr. G. Aschmann has very fine azaleas, hydrangeas, Easter lilies, spiræas, cinerarias, tulips hyacinths and other plants in bloom and bud. We very highly recommend our customers to Mr. Aschmann for fair and reliable business treatment. (Signed) Henry F. Michell, 1018 Market St.

No use talking, Mr. Aschmann has a very fine lot of Easter plants, and I am greatly surprised at the low prices quoted on same. I can recommend Mr. Aschmann to anyone, as I have known him for the past 29 years. (Signed) Geo. Huster, head gardener of Girard College, Philadelphia, Pa.

There is nothing too much said in Mr. Aschmann's ad; all that is said is true. (Signed) Thomas Logan head gardener to W. L. Elkins, Ashbourne, Pa.

On account of saving express charges please mention if plants are to be taken out of pots or not.

Buyers visiting Philadelphia are respectfully invited to call at my place and examine my stock before buying elsewhere; only 25 minutes' ride from City Hall. Take 13th st. car, or Germantown car, 8th and Market Sts. north to Ontario St. and walk one square east. Cash with order, please.

Money can be sent safely by Express or Postal Money Order, Registered Letter or Draft.

All goods shipped at purchaser's risk.

GODFREY ASCHMANN, 1012 Ontario St., Philadelphia, Pa.

FOLEY
CAST IRON
GUTTER

This cut is not full size. We make two sizes: 2⅞x5 inches and 2⅞x6½ inches, inside measurement of waterway.

No rotting at the ends of bars. The end wood is not punctured. Bars always have perfect bearing, and the drip falls free into drip conductor.

Your bars will last five years longer than on old style gutters. The lugs through which the screw fastens the bar are cast on the gutter.

Mention the Florists' Exchange when writing.

WANTED at once, young or middle-aged man to travel on the road, soliciting orders for hardy nursery stock and landscape work. Will pay salary and expenses according to knowledge of business and executive ability. Situation permanent. West Side Nurseries, Worcester, Mass.

WANTED

FOR AN ALL-AROUND OFFICE MAN, a bright young fellow of 20 to 25, familiar with nursery varieties and preferably having some knowledge of book-keeping. Must be of good address and capable of acting as traveling salesman occasionally. Address "Wholesale Nurserymen," care Florists' Exchange.

MISCELLANEOUS WANTS

WANTED—Second-hand, modern, iron frame greenhouse about 20 x 100. F. o. b. cars or steamers, for cash. A. W. Smith, Americus, Ga.

WANTED, to buy 3000 to 4000 ft. of glass with dwelling, not less than one acre land. State price and reason for selling, dimensions and lay of houses. H. Christensen, 250 Adams St., Brooklyn, N. Y.

WANTED, lowest quotations for American Pearl tuberoses, 4 to 6-inch bulbs; delivery early next season. Also for flower and vegetable seeds, crop 1903. Firm offers to Pontey's, wholesale seed and bulb merchants, 21 Cornwall St., Plymouth, England.

BUSINESS OPPORTUNITIES

LARGE greenhouses, well stocked, doing good business, house and ten acres of land, in large city in northern Ohio. Address L. L., care Florists' Exchange.

FOR SALE or rent, greenhouse property two acres, seven houses, dwelling, barn, sash, gas and water privileges. Ten minutes by rail from 34th St. Ferry, N. Y. City. Possession immediately. A. Gladstone, Real Estate, Woodside, L. I., N. Y.

A GOOD POSITION is offered to a man who can invest a small amount of capital; one who understands the needs of florists' building materials. Don't waste time writing unless you mean business. Address O. J., care Florists' Exchange.

FOR SALE, well paying florist establishment at Grandview-on-Hudson, N. Y. Three greenhouses 20x130; seven acres land; nine-room residence; everything in fine condition. Address N. L., care Florists' Exchange.

FOR RENT or sale, three greenhouses, 24x200 ft., ¾ span; propagating house 100 ft.; potting shed; steam heat; city water; dwelling and stable, at Highland, opposite Poughkeepsie, N. Y. Immediate possession. Joseph Wood, Spring Valley, N. Y.

FOR SALE on easy terms at Secaucus, N. J., 40 minutes from Hoboken Ferry; two desirable places for florists, plot 200 x 600 feet with large house, and carriage house, with stable. Plot adjoining 175 x 600 with house, carriage house and barn. Address J. N. Kip, 211 Greenwich Street, N. Y.

TO RENT—At Woodside, L. I., within three miles of 34th street ferry, my entire greenhouse plant consisting of about 17,000 feet of glass. All A 1, heated with seven Hitchings boilers. A visit for inspection will convince you it's a snap. Alex. S. Burns, Woodside, N. Y.

FOR SALE—Old established florist business, 4½ acres of ground, 10 greenhouses, cold frames, 7-room house, barn, etc. Large cemetery opposite. Thirty minutes from New York City. Trolley cars pass place; 36 years in present location. Entire property and business. Large field for wholesale and retail trade. Call and inspect, or address Mrs. C. M. Hutchinson, Elizabeth, N. J.

A Business Opportunity

20,000 feet of glass, well stocked and in good condition; also a city retail store with a well established, profitable trade, for sale at a bargain.

Owner would prefer to sell the houses and keep the store, taking, if desired, the output of the houses; or would sell an interest in the business to a competent, pushing grower.

This is an opportunity for a grower to establish himself near to one of the best markets in the country, or for a storeman and a grower to mutually acquire, on favorable terms, a desirable plant and a store with an established, profitable trade.

This is a proposition that will bear careful investigation. Address,

FRANK HUNTSMAN, Cincinnati, O

FLATBUSH, N. Y.—Henry Hession ha secured a permit to construct a gree house, 25 x 125 feet, at his establishme on Clarkson street.

Orange, N. J.

Society Meeting.

The regular monthly meeting an flower show of the New Jersey Flor cultural Society was held on Wednes day, April 3, with a large display cut flowers and plants in pots. Prom inent upon the center table were vase of long-stemmed roses from Pet Duff, antirrhinums of large size fro George Smith and some extra large a lamandas grown by John Hayes; als some remarkable floriferous genista from Malcolm MacRorie and crotor in pots from D. Kindsgrab.

The society was disappointed at n hearing from A. D. Rose on "Plant for Easter Flowering," as had been an nounced. The time allotted to th subject was taken up in a discussion the violets brought by Robert M Gowan, the well-known shoemaker Orange, who was asked to tell his ex perience in raising violets. The mont of September Mr. McGowan conside the most trying time on violets, owin to the prevailing mold, which als manifests itself on shoes, it being a most impossible to keep it off stock a that season. He is very careful t cover his violets at night from the de at that time. The flowers shown wer of fine quality.

The prize to be given by this societ to the Chrysanthemum Society

America was discussed, and the suggestion of President Herrington, that the society fall in line with other associations in the classes for 24 and 12 distinct varieties was finally adopted. By this is opened the Pierson sweepstake cup, which is to be given those competing for the 24 and 12 varieties prize.

Four sterling silver cups were displayed, these to be given as prizes to the winners at the monthly show of flowers, fruit and vegetables at the close of the season. A fifth cup was offered by A. Schoenthal, of Orange, and accepted, the exhibition committee deciding to award it at a special rose exhibition in June, for the best six varieties of four blooms each, grown in the open. A vote of thanks was accorded the donors of the cups.

J. B. D.

Deceased.

J. Frank Green, of the firm of Green & Underhill, Watertown, N. Y., died March 29, aged 46 years.

Society of American Florists.

Meeting of the Executive Board.

The executive board held its regular Spring meeting at Milwaukee, Wis., on March 17-18, 1903. They found a degree of enthusiasm prevalent in Milwaukee and in Chicago that promised well for a record-breaking convention next August.

The convention building which the local club had recommended for the meetings and exhibition was found to be admirably adapted for the purpose and with an area of available exhibition space such as the Society has never before had at its command. The building is centrally located, occupying the block bounded by Fifth, Sixth, State and Cedar streets.

The facilities for the bowling tournament and similar pastimes which are a prime attraction for many of the Society members, were found to be unprecedentedly ample and well adapted. there being sixteen fine alleys in the building which will be secured for the exclusive use of the bowlers on the day of the contest.

The program, as far as completed, provides for the opening sessions of the convention to take place at 3 P. M. Tuesday, August 18; the President's reception on the evening of the same day; an illustrated lecture on the evening of the second day; papers and discussions at the various sessions upon the following subjects: Decorative Planting About Suburban Homes; A System of Accounts for Greenhouses and Forms for Determining Cost of Production; Latest Advances in Greenhouse Construction; The Humorous Side of the Florists' Business; Promising Substitutes for Coal and Their Record to Date; Cooling Processes and Their Value in Keeping Cut Flowers; Violet Culture in the West, and Modern Methods in Floral Decoration. Bowling tournament on Wednesday afternoon; shooting contest on Thursday afternoon, and a good time with the local brethren on Friday.

It was voted that another opportunity be given growers and dealers in American-grown forcing bulbs to exhibit their products without charge, as at Asheville, the bulbs to be retained by the Society for testing purposes.

It was decided to continue the offering of silver and bronze medals for new and meritorious plants and flowers through the agency of other societies holding regular floral exhibitions, as in recent years, but hereafter no medal can be issued more than once for any one thing. Should a duplication in awards occur, as has happened several times in the past, the secretary shall issue but one medal, priority of notification from the awarding society securing this, and all duplications being covered by the issuance of certificates of award.

The problem of how to keep members interested in the work of the society while in session received special attention, and it was finally decided that the president be authorized to appoint a sergeant-at-arms with two assistants, whose dutv it shall be to enforce the rules regarding the management of the trade exhibition, to insure as far as possible prompt and full attendance at the sessions and maintain order in and about the convention.

Appointments were made by the president and confirmed by the board as follows:

Superintendent of Trade Exhibition F. H. Holton.

Legislative Committee—J. N. May, Robert Craig, J. K. M. L. Farquhar.

Botanist—Dr. N. L. Britton.

Entomologist—Professor L. O. Howard.

Pathologist—Professor A. F. Woods.

Committee on Sports—P. J. Hauswirth, C. C. Pollworth, F. Schmeling.

The following final resolutions were adopted by a unanimous vote:

"We, the members of the Executive Committee of the S. A. F., in annual meeting assembled in Milwaukee, March 18, 1903, desire to express and hereby put on record our hearty appreciation of the courtesies extended to them by the Florists' Club of Milwaukee, by the management of the Plankinton and Pfister hotels, by the daily press of Milwaukee, and also to acknowledge the hospitality shown us by our brethren while passing through Chicago and the courtesies extended by the American Florist Co."

WM. J. STEWART,
Secretary.

Sergeant-at-Arms for S. A. F.

From the report of the minutes of the meeting of the executive Board of the S. A. F., held at Milwaukee last month, furnished by Secretary Stewart and appearing on this page, it will be learned that the directors have authorized the president of the Society to appoint a sergeant-at-arms and two assistants, "whose duty it shall be to enforce the rules regarding the management of the trade exhibition, to insure, as far as possible, prompt and full attendance at the sessions, and maintain order in and about the convention."

We believe this to be an admirable, appropriate, and necessary innovation; and have no doubt it will be so regarded by all who are of the opinion that rules are made to be enforced, not disregarded, and who attend the annual conventions of the S. A. F. to obtain the greatest benefit accruing from the business meetings, as well as from the trade exhibit itself.

The rules regulating the exhibition, the intent of which is now to be carried out, are as follows:

11. The exhibition shall be closed between the hours of 2 and 4 P. M. on the first day of the convention, during which time the judges shall pass on the exhibits, and they shall report promptly to the secretary on the same day. Exhibitors shall be excluded from the hall while the judges are at work.

13. Doors of the exhibition shall be closed five minutes before the opening hour of each session of the Society, and remain closed during the session.

These rules, originally instituted to serve a useful purpose, have, unfortunately, been "more honor'd in the breach than the observance," frustrating to a great extent the attainment of the object for which they were inaugurated. Their strict enforcement will in no way militate against exhibitors, each one of which will be placed on an equal footing, something which does not happen when less stringent methods are employed.

We do not lose sight of the great value of the trade exhibit as an auxiliary of the annual convention; nor would we endorse any movement calculated to curtail the privileges, or hamper the business realizations or expectations of exhibitors. We are of the opinion, however, that the rights of these exhibitors will be best conserved when the rules under which they contract with the Society to take space and stage goods are fully observed, such rules having been made operative for that very purpose.

The primary object of the annual convention is the transaction of the business of the S. A. F. in the best possible manner; so that the benefits resulting from the deliberations of the delegates shall be of the most comprehensive and far-reaching character; and this can only be attained when every delegate present does his part to accomplish it—by attendance at the sessions and active participation in the work in hand.

Heretofore, the conduct of the S. A. F. delegates in session assembled has been most exemplary; and the office of a "Black Rod," had such a functionary been in existence, would have indeed been a sinecure. Yet there have been times when thoughtless or inconsiderate individuals have congregated in coteries in the convention room, whose audible debates on self-interesting subjects, separate and distinct from those of the Society, have proved most tantalizing and detrimental.

At the Milwaukee meeting, too, the convention room and exhibition hall adjoin—a condition which renders a rigorous enforcement of the rules quoted imperative. Weighty matters will engage the attention of the delegates in August next, and these subjects can best be handled when perfect quiet reigns in the environments of the deliberators.

"Let us have peace" will no doubt be the watchword of the stalwart sergeant-at-arms to be appointed, and the mighty men who will aid him; and the less the necessity of their services the greater the benefit to be reaped generally from their strenuous supervision of the Society's sessions.

New York's Plant Market Again.

Each recurring Springtime demonstrates more forcibly than its predecessor the great need of some suitable market being provided in which to dispose of the products of the plantsmen plying their vocation in the neighborhood of New York, who look to this particular branch of the trade for a livelihood. And this year the need is more pronounced than ever on account of the demolition of the old Clinton Market, at Canal and Washington streets, which for a few seasons back has been used by the Spring plant growers as a mart. A movement has been instituted by those interested to induce the municipal authorities to provide comfortable and appropriate market quarters for the plantsmen, but the effort is not meeting with that degree of success which would be expected, nor which the beneficent character of the business demands. All that has, so far, been accomplished is the clearing away of the rubbish of the ruined structure, and the rendering available of open air space on which the market men may stand their stock every morning.

This is a condition not at all creditable to the governing body of the metropolis. New York is far behind the older cities of the Continent of Europe in this respect. London, Paris, Berlin and other capitals of European countries have ample marketing provision for the products of the florists, in the form of large roomy structures, appropriately equipped for such a purpose. The powers that be and the public over there recognize in the florist a factor that is doing far more for the amelioration of human kind than some institutions that are promoted and maintained by appropriations from the public purse for their generally believed uplifting and upbuilding influences. Appeals to have our own authorities view the matter in a similar light and act accordingly have for years been in vain. New York is still without its proper plant market.

What public or political shortcoming refuses or delays to do, private enterprise should at once take hold of and carry out. We are of the belief that sufficient capital could be secured within the trade and outside of it, to purchase a favorable site and construct thereon a building for market purposes, properly equipped, that could be operated at a profit to the investors The initiative should be taken by some outside party, or parties, fully alive to the necessities of the case; competent organizers, who could put in motion the machinery necessary to a successful culmination of the project.

The tendency to centralize, the desire to "get together" existing among those engaged in the cut flower branch of the business leads to the belief that, were such a building erected, these men, too, would seek quarters there, doubtless at a financial benefit to themselves, from the viewpoint of rent and otherwise.

To further plead with, petition or pray the city authorities to appropriate funds for the erection of a structure for plant and flower market purposes, viewed in the light both of past and present experience, is a futile task that will end only in disappointment Private capital, private energy, brains and public spirit will cause to materialize in New York her much-needed and long-waited-for "Covent Garden," in half the time that politicians will take to bring the matter even to the attention of the Board of Apportionment.

Put not your trust in politicians gentlemen. Rely on your own resources to raise yourselves out of your present business-clogging condition.

Obituary

Dennis Salter.

Dennis Salter, a florist and market gardener of Pittsford, N. Y., died at his home on March 22. He had been a resident of Pittsford for forty years. He was 77 years of age.

Louis C. Knickman.

Louis C. Kinckman, of 1414 Broadway, Brooklyn, N. Y., died Wednesday, March 31, aged 53 years. The deceased had been engaged in the florist business for the past twenty-nine years. He is survived by two daughters and two sons. The younger of the sons, Louis, Jr., will continue the business.

E. B. Joseph.

E. B. Joseph, father of Miss Rosa Joseph, florist, passed away March 4 at his home in Pataskala, Ohio, in his eighty-seventh year, after being an invalid twelve years. He was for many years a gardener and small fruit grower of considerable local note.

Reflections on Current Topics.

Mr. Editor: I was somewhat astonished to read your comments under the title of "The Conviviality of the Craft" in a recent issue. It had always been my impression that you held radical views on the subject discussed, and I was therefore amazed at your inconsistency in advocating the "convivial spirit" as an indispensable adjunct of club meetings. I must take issue with you on that point. To my mind, a disbursement for liquid refreshments, teetotal or others, is a wanton waste of club funds that could be put to much better use; as for instance, the acquisition of books to form the nucleus of a horticultural library, or to lay the foundation of a fund to purchase or rent an exclusive club room. In all the clubs to which I belong, drinks are not doled out free; but each member troubled with a thirst has to buy the thing that quenches it.

From what I have recently read, too, it would seem that instead of endeavoring to promote the social habit, an advocacy of its repression would be more fitting and timely. In one of your Western contemporaries appears a report of a dinner tendered the S. A. F. executive committee in Chicago, at which "several libations were poured." I was sorry to read that—not on grounds of mere sentiment, but that those to whom we look to lead us in society matters in general should have cast upon them a stigma unworthy of resting on men in their position.

[Our correspondent takes this matter too seriously. The libations were poured from a coffee pot, not long-necked bottles.—Ed.]

It was only natural that the Scotchman you quoted should flee to his favorite Burns for support of anything savoring of conviviality. The men beyond the Tweed find a never-failing argument in the rantings of the bard who lost no opportunity to sing in praise and condonation of the habits that stigmatize his countrymen. That is probably one of the reasons why they adore him.

[Nevertheless, there are some, both Scotch and others, who are not worthy to unloose his shoe latchet.—Ed.]

⁂

I have been looking for some report on that peony matter, telling us what the executive committee of the S. A. F. did regarding it, as the secretary of the "alleged Peony Association of the S. A. F.," in one of his several communications, led us to believe it would be discussed by that august body—I mean the executive committee. However, nothing has yet appeared anywhere, as far as I have observed. I noticed that a long list of Japanese peonies, many years in commerce, had been registered by the so-called "association," and also, "provisionally," until March 23 (I wonder what happened on that specific date), by the S. A. F. itself. The thought struck me, and I reflected, what's the use, or need, of double registration—particularly by the S. A. F. and an "association" of the same Society—of the same materials?

Then a bright idea struck me, that after all there might be some virtue in the creation of an association like that now said to be devoted to the peony. The aforesaid secretary says the men now working in the interests of that plant are doing so for the love of the thing, and at a disadvantage in loss of time, etc., to themselves. Here's a chance to save money to the S. A. F., thought I. Why not establish associations devoted to the interests of every horticultural staple within the purview of the National Society; appoint presidents and secretaries of these, possessed of the same public spirit and generous character; give these secretaries charge of the registration of old and new plants included in the special line under their supervision, and other appurtenances that pertain to secretaries generally, and dispense with some of the officials of the S. A. F? There would be little need of a society that but does the work of "associations" of itself, provided we had a sufficient number of such "associations" to keep things going straight. Will it come to this? It may; if the men interested in every trade staple demand—as they are equally entitled to do, with those booming the peony—an "association" of the S. A. F. to push along the plants in which they have largely invested. That is merely the opinion of JOB.

PAMPHLETS RECEIVED.

CUCUMBERS UNDER GLASS. By Professor George E. Stone. Bulletin 87, Hatch Experiment Station, Amherst, Mass. Treats on the types of greenhouses, cultural methods, diseases and insects, etc. Professor Stone says: "The cheapest and most economical house to build and operate in the production of cucumbers is an even or two-thirds span house of large dimensions, such as is most frequently used by lettuce growers. If a side hill with a southern slope were available, an economical house, well lighted and easily heated, could be built.

Too light colored cucumbers do not command as high a price as those well colored, consequently they are not so desirable. The fruit of the Hybrid (White Spine × Telegraph) possesses more color than the White Spine, and on this account is preferred by many. Sometimes the White Spine becomes abnormally light, which is believed to be due to the absence of certain fertilizers in the soil. Many growers believe they obviate this trouble by using nitrate of soda as a fertilizer. Care should, however, be exercised in its use. Too heavy doses restrict root absorption, thus causing a wilting of the foliage. It would seem desirable to put on nitrate of soda in a liquid form with some such device as the Kinney Pump. A solution containing one part of nitrate of soda to eight hundred or one thousand parts of water can be used occasionally and constitutes a desirable form to apply.

The White Spine cucumber is probably the most productive of any strain grown under glass.

Parties interested will find this bulletin of great value.

Some Corrections.

The Easter price of Fancy Ferns in our advertisement on page 384 of last week's issue should read $1.75 per 1000, instead of as printed.

MICHIGAN CUT FLOWER CO.,
Detroit, Mich.

The initials in Mr. Horsford's advertisement of hardy plants, page 338 of last issue, should have been F. H., not H. S. The address is Charlotte, Vt.

Through a misunderstanding the following items were omitted from the advertisement of Byer Bros., Chambersburg, Pa., on page 347 of last week's issue: Verbena Giant, 10 kinds R. C. 50 cents per 100; $4.50 per 1000. Petunias, double, 15 fine sorts, R. C. $1.00 per 100.

Azaleas.

(83) G. E. F. Azaleas are hard-wooded flowering plants and have to be several years old before they are large enough for commercial purposes. They are grown extensively in Europe and are imported to this country in various sizes by wholesale growers and dealers. To have a stock for 1904, the plants can be purchased next Fall. Watch the advertisements in The Florists' Exchange, and offerings of azaleas will be seen in due season.

To Eradicate Chickweed.

(84) I have a piece of ground which I wish to use for pansies this Spring. It is full of chickweed. Is there anything I can use to kill same, and still have the soil ready for use in June?

S. E. B.

—Dig over the ground as deep as possible, turning the weed into the bottom, and it will cause no further trouble.

Carnations Going to Sleep.

(85) What causes my carnations to go to sleep? I do not fire now. The temperature is 50 to 55 degrees at night and at times 70 to 80 degrees daytime. If I cut the carnations to-day and send them to my wholesale florist to-morrow they all go to sleep. I have not got my glass shaded yet.

SUBSCRIBER.

—Discontinuing the fire so early in the season is no doubt the primary cause of the trouble. The house must have been kept quite close during the daytime to allow of the temperature reaching 80 degrees. Give more air and avoid such extremes of temperature, and the flowers will soon show better keeping qualities.

Physostegia Virginica.

(83) Over Mr. J. T. Lovett's signature we notice an article on Physostegia virginica (issue of March 21). Please state through the columns of your paper whether Ph. virginica or virginiana is correct, or which is more generally accepted.

C. BROS.

—The correct botanical name of Dragon's Head, or Lion's Heart, is Physostegia virginiana, but it has become known in common use as Physostegia virginica. Doubtless this shortening of name has occurred for brevity's sake; just as the Canna austriaca is now known as Canna Austria.

J. T. LOVETT.

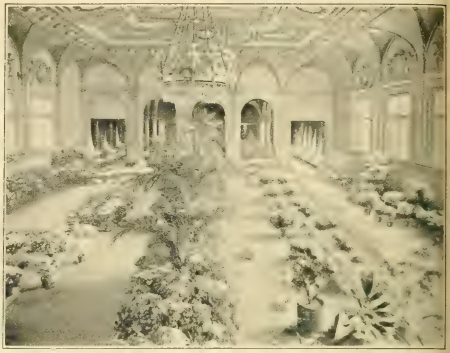
BRIEFS FOR BUSY FLORISTS.

EASTER PREPARATIONS. — The coming week will be a particularly busy one at those establishments where a growing and retail trade is carried on. The many flowering plants have to be got into shape for Easter delivery, and where the trade is such that fancy prices cannot be charged for pot covers, ribbons, etc., it is often a difficult problem how to send out the plants at Easter time, suitably trimmed, and still reserve a fair margin of profit. The use of ribbon is not an absolute necessity and, in many instances, can be dispensed with. A covering for the pot, however, is indispensable, and no plant should ever leave a florist's premises without one. Not only is a covering necessary to hide the earthenware, but to enable the recipients of the plants to handle them without soiling their hands.

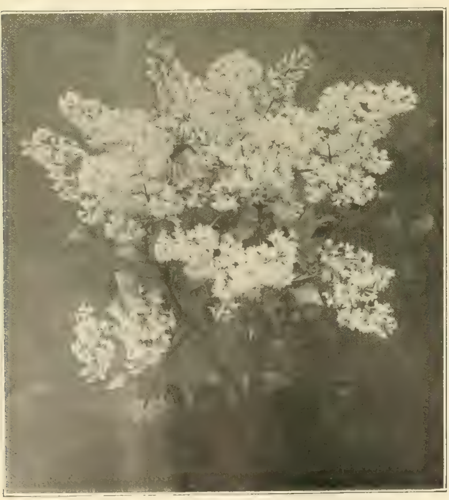
A very effective covering for large pots can be made with live sheet moss gathered from the woods. The moss should be pulled in good-sized pieces; then it is a simple operation to tie it around the sides of the pot, using a green cord, so that the cord will not show after the work is finished. The surface of the soil in the pot must also be covered with the moss, fastening it down with a piece of wire bent to the shape of a hairpin. For azaleas, roses, lilacs, or ericas, we know of no pot cover that is more decorative than one made with live moss.

Then there is a new pot covering material called Barkine. This we have only recently become acquainted with, and its very cheapness and neatness should recommend it to every florist. Barkine looks very nearly like the birch bark cover, and can be obtained in all sizes; and as the cost is only a few cents, according to the size, it will prove a great help to the busy florist.

Crepe paper can, of course, always be used at a minimum of expense; but the covers above mentioned can also be had for little cost and will add much to the variety of the stock in trade.



GENERAL VIEW OF MAIN EXHIBITION HALL, PENNSYLVANIA HORTICULTURAL SOCIETY.



LILAC MARIE LEGRAYE.

HERBACEOUS PLANTS.—If any planting of new stock is to be done this Spring, get at the work as early as the weather and condition of the soil will permit. In preparing the ground for these plants, one can hardly be too liberal in the treatment of the soil, if the best results are desired. As is well known, after the planting is done, the plants need not be disturbed again for several years; and it is well to bear that fact in mind when preparing the soil. Work it deeply, and give a liberal supply of well-decomposed barnyard manure at the same time.

OUTDOOR ROSES.—These will require some attention shortly, such as clearing away the mulch and straw that have been their protection through the Winter; also pruning them back according to their various needs. The hybrid perpetuals should have all their weak shoots cut out entirely; and the strong wood should be pruned back severely.

The tea and hybrid tea roses will not stand pruning so severely, and this must be borne in mind when the work is being performed. After the pruning is finished, tie each plant to a stout stick, and then cultivate the surface of the soil lightly, being careful not to go deep enough to disturb the roots.

Texas Flower Shows.

The various floral societies of Texas are making the usual preparations for the annual flower shows to be given this Fall, and premium lists, calculated on improvements on the year before, have been made and will be ready for distribution in a short time. The principal floral shows of the State will be held at Houston, Waco and Marshall, and from most points of view the managements of these organizations have every encouragement to go into it each year on a larger scale than in the year before. The Faith Home Association at Houston not only had a very creditable show last year, but realized a net profit in cash, of about $735. And the intention this year, as indicated by the premium list already formulated, is to offer some good prizes for carnations as well as the usual offers for chrysanthemums and other flowers. It is the impression that a little deviation from beaten paths will be acceptable to florists as well as the visiting public, and it is expected that many of the carnation growers of the more northern States will avail themselves of the opportunity to send carnations as well as the prize winning chrysanthemums they have been sending from year to year. It is also very likely that the show will be held three days this year instead of two as heretofore, with an additional length of program.

The Texas State Floral Society at Waco, was unfortunate last year in not making enough revenue from door receipts and other sources to pay off al premiums that were awarded, the deficit being about $240. It is now the intention of this organization to hold a Spring flower show, largely for the purpose of making enough money to clear off this deficit, that all premiums may be paid in full before the time of the Fall show. It is feared that unless these obligations are met the usua interest in the Fall show will be lacking. The program for the Spring show is now about arranged. Mr. Beach, the florist of Dallas, has been asked to act as judge, though his acceptance has not yet been made known.

The East Texas Floral Association o Marshall will have its premium lis out in a short time, and the intention is to make it on a much larger scale tha flowers may be drawn from all the States as far as possible as well as from Texas only, as heretofore. There is no part of the State better adapted for outdoor chrysanthemum culture than Marshall, and the success they have had heretofore from products of the immediate vicinity has been almost wonderful. This society is on a good financial basis, coming out about even in this respect from last year's show. As all their people are a unit in the work they have every reason for greater success than ever before.

S. J. MITCHELL.

Exhibitions.

The schedule of premiums for the fifth annual exhibition of the Tarrytown Horticultural Society, to be held Wednesday, Thursday, and Friday, November 4, 5 and 6, 1903, has been issued.

Edward W. Neubrand, Tarrytown, N. Y., is secretary.

Lilac, Marie Legraye.

This illustration is from a photograph taken February 13, 1903, at the establishment of Endtz, Van Nes & Co., Boskoop, Holland.

MANCHESTER, CONN.—The Hubbard place on Oakland street, which was bought years ago by Nehemiah Burr, a son-in-law of Mr. Hubbard, of Durham, this State, is being gradually transformed into a good-sized nursery. On the farm there are 40 acres, of which about 25 acres are suitable for planting purposes, and the ground has been ploughed and made ready for the many fruit trees, shade trees and shrubs of all descriptions. The work was begun a year ago. Clifford R. Burr, son of Nehemiah Burr, is to run the nursery. He will move from Hartford to Manchester about the 15th of April. Clifford R. Burr & Co. have a nursery in West Hartford and the nursery on Oakland street will be run in connection with it.

Value of Judicious Planting for the Suburban Home

Read by Samuel C. Moon, before the Farmer's Institute at Philadelphia, February 11, 1903.

If any proof were needed that the judicious planting of trees and shrubs about suburban homes increases the value of those homes it is found in the public advertisements of such property. When we see suburban homes advertised for sale, if the facts in the case will warrant the statement, mention is pretty sure to be made of one of the important recommendations of the place—that it is well supplied with shade and fruit trees. Here is a practical demonstration of the truth of the subject assigned to me. It is a fact generally recognized, that the tasteful and judicious planting of fruit and ornamental trees enhances the value of real estate more than an equal amount of money invested in any other way.

The question then arises how to plant tastefully and judiciously.

By tasteful and judicious planting we mean such selection of trees and plants, and such arrangement of them in the grounds, that the comfort, convenience and landscape effects will be most pleasing to those who occupy the premises and must view them most. Pleasing to them from various viewpoints; pleasing to their eyes under varying conditions of season and weather; pleasing to them as soon after planting as may be practicable, and continuing to satisfy with increasing pleasure as the plants grow and develop through a long period of years.

This, of course, recognizes that there must be varied styles of planting to suit different tastes, temperaments and habits of life. Some prefer to plant their grounds with fruits, while others would plant for shade, or ornamental effect; while in some suburban grounds there is only room for rudimentary efforts in garden work. But there is scarcely any dooryard so small but it may have at least a lilac or a box bush in a corner, or a bed of herbaceous plants, along a path, or a clump of hardy ferns on the shady side of porch or house.

Such work necessarily involves more knowledge of trees and plants and of gardening work than many owners of suburban homes possess. To these I wish to extend at the outset a word of encouragement, and tell them that they will find the study of their own home grounds, and of trees and plants, and of garden work as related to their individual needs, pleasant and profitable. It will necessarily lead them into closer observation of tree and plant life, and into more intimate acquaintance with the ever-changing appearances and developments of vegetable growths from month to month, and from year to year.

I wish to encourage the idea that the adornment of the home grounds, whether large or small, should be a continued object lesson in nature study, and the outgrowth of this study should be worked out in the home grounds and beome an expression of the personal tastes of those who occupy them Home-makers should be, as far as practicable, their own head gardeners. If they have any taste for rural beauty, or any knowledge, be it ever so small, about gardening work, let them cultivate their gift by exercising it. Let them learn all they can from nurserymen, gardeners and professional men, but learn still more from what they see in the world around them.

The planting of a lawn is not a job to be commenced and finished in a week, or even in one season; but may with advantage be the work of years. It must be a growth, and must be watched and studied and treated as development progresses. It is impossible to designate one tree or plant or any list of trees or plants as the best for any use or position, without knowing the conditions involved, and even then the question of best is often a matter of personal taste or opinion.

There are desirable and objectionable features connected with almost every tree, rendering it valuable or unsuited to certain localities or situations.

From a study of neighboring lawns much can be learned of the right and the wrong of garden designs and garden work. Visits to public and private parks and nurseries will show some of the possibilities of natural and of artificial gardening. Watchful observation of trees and shrubs in lawns and woods throughout the year, from the first bursting of buds in Spring till the fall of leaves in Autumn, will disclose new points of advantage or disadvantage of one tree or plant over another for a special use or for some particular location which needs improvement. Observation will show which trees are long livers and retain their beauty and increase in value through long series of years or centuries, and the advantage of such trees over short-lived species, which sprout up quickly and in a few years begin to decline or disfigure the grounds which they should adorn. A wonderfully instructive object lesson of this kind is seen in Fairmount Park along Elm avenue, where the Centennial Exhibition buildings stood in 1876. On these grounds there are now growing thousands of trees of from 25 to 30 years' growth, which were planted in their present position about 1883. In this collection are found a score or more of different species of oaks, with elms, lindens, maples, planes, poplars, beeches, birches and other less common species.

AZALEA AMŒNA.

EXOCHORDA GRANDIFLORA—PEARL BUSH.

The opportunity here afforded for a comparative study of the growth of trees is invaluable, and should be appreciated by all who have to do with tree planting. Here we see that oaks that were formerly considered to be too slow of growth to be available for street planting, or for general use in lawns, have in twenty years outclassed the lindens, maples and poplars, which have been so largely employed in suburban districts because they grow vigorously, developing rapidly soon after transplanting. But it has been found that any advantage which these quick growers may show at first is but for a few years in their early life, and that in the long run longer-lived trees are decidedly preferable for use about suburban homes.

I would in the strongest terms encourage a more general planting of oaks, particularly those of the white oak class, including the white, swamp white, burr or mossy cup and red oak. Tulip, poplar, Kentucky coffee, beech, buttonwood and elm are also desirable long-lived species, which will grow and improve in character and beauty for centuries. Such trees afford pleasure to their planters through life, and will be left as valuable assets to their children and to children's children for generations to come.

Great loss is sustained in many country homes to-day because the plantings about them, made from 30 to 60 years ago, was so largely of silver and ash-leaved maples and other soft wooded trees, which have passed their prime and are rapidly declining, or are already dead and gone. Too many of our octogenarian neighbors, who planted trees about their homes when they were young men, instead of now having splendid vigorous trees in the prime of life to shade their hoary heads, trees which they could bequeath with pride to posterity, can look only into the straggling tops of feeble trunks, whose lives, like their own, are nearly spent.

While the silver-leaved maple is a good tree in its way, it is comparatively short-lived, and after it passes beyond the youthful beauty of its first twenty-five years of growth, it usually assumes a homely, sprawling shape, and gradually declines. Before reaching fifty years of growth it presents such an appearance that almost every planter would rather have any one of the trees named in the above list in preference to it.

But much worse than silver maples are those rank weeds, the Carolina poplars, which are to-day disfiguring so many streets and lawns where something more suitable, prettier and better adapted to the purposes intended should have been introduced. Therefore, I say, don't plant silver maples without first ascertaining whether they are the best trees for the position, and never plant Carolina poplar about suburban homes; that is, hardly ever, except it may be as a temporary makeshift to fill up space while something better is getting under way; and then do it with that sense of shame which you would feel in using any kind of inferior goods which you think is beneath your true dignity, and then by all means cut them out before they injure or ruin more valuable permanent plants.

Trees and shrubs with evergreen foliage should enter prominently into the planting about suburban homes. In many sections this feature has been too much neglected. They afford an enlivening tone of color amid the somber hue of Winter landscapes which is very pleasing to the eye.

(To be continued.)

Azalea Amoena.

The pretty bush evergreen Azalea amœna is one of the best known of all the family. It is so unlike any other. And then, being hardy and evergreen, is so much in its favor, to say nothing of its lovely rose-colored flowers. Rose color is said, though the exact color depends on situation; sometimes it is almost crimson.

In very severe Winters the foliage will be a little damaged, but the wood rarely. As soon as the sap rises in Spring the flower buds begin to expand, and by May this bush is in its glory when in vigorous condition.

As with all azaleas, it stands pruning well, and when it gets old is much improved by being cut well back. And it likes good food, too. Feed it well and prune it occasionally and vigorous shoots result, which give abundant bloom.

The specimen illustrated has grown pretty much at will, and is seen in a natural condition, and it cannot be bettered. This fine shrub is a native of China, and is among the hardiest of the many shrubs from that country.

Exochorda Grandiflora.

Until a comparatively recent period the exochorda was not to be found in quantities in any nursery. It is different now, as the plants first distributed produce seeds freely, and any one having a large bush or two of it can soon raise a lot of seedlings. Beautiful as this bush is when in flower, nurserymen say it requires either a knowledge of its merits or confidence in the nurseryman's integrity to sell it when in a dormant condition, as then its appearance is not striking. There are other shrubs of the same nature. Such a grand thing is this exochorda when in bloom that one is quite justified in compelling a customer to add it to his collection.

The illustration shows but a fair specimen. Plants are often clothed with flowers from the ground, and of beautiful shape. Its common name, Pearl bush, has been given it because of the lovely pearl-white blossoms. In former times this shrub went under the name of Spiraea grandiflora.

Another species, Ex. Alberti, by many lauded as superior to this one, is quite the reverse, as it grows here.

JOSEPH MEEHAN.

Fern Hybrids and Hybridizing.

By Willard N. Clute, Editor of the Fern Bulletin.

While it is quite possible to hybridize ferns, this operation is much more difficult than in flowering plants, for the reason that ferns bear no flowers. The nearest that ferns ever come to producing flowers is found in the so-called prothallium, the tiny green scale-like body which all florists have seen growing on shady walls in the greenhouse, or clinging to pots that have not recently been moved.

This prothallium contains the sexual organs, and is the part of the fern used in hybridizing. It arises in the following manner: As most fern leaves mature, they bear on their under surfaces certain small dots or lines that are often mistaken for insects by the uninitiated. These are the "fruit-dots," and to make out their nature requires at least a simple magnifier. It is then seen that each dot consists of twenty or more tiny stalked globes. Inside these globes are numerous very small bodies called spores, and each spore, when ripe, if it alights in a favorable spot, will germinate and form a prothallium, and the prothallium eventually produces a new fern plant.

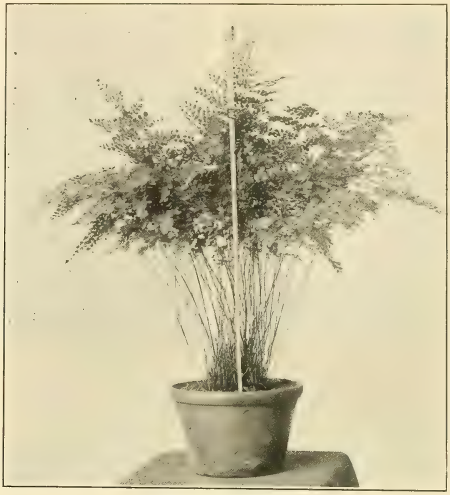
The prothallium is heart-shaped, or notched at one end, and near the notch tiny, hairlike growths fix it to the soil. On the under surface, near the notch, are borne small bodies known as archegonia, which may be roughly likened to the pistils of flowering plants, while beyond them are other bodies called antheridia, which in the same way answer to the stamens, though they are not identical with them. And just as in flowering plants, the pollen from the stamens must reach the ovules in the pistils to fertilize them, so in the ferns a union of the contents of antheridia and archegonia are necessary to produce a new fern.

The small size of the prothallium and the proximity of the two sets of organs make the chances of natural crossing exceedingly remote. It is quite possible, however, that by sowing spores from different species thickly together some crossing might result, for in certain plants allied to the ferns some spores invariably produce male organs (antheridia) and other female organs (archegonia) only.

Artificial crossing is much more certain, and the remarkable tenacity with which the prothallium holds to life and endures mutilation is much in the hybridizer's favor. The sexual bodies are usually borne on the dark underside of the prothallium, but expose this to light and they will be borne on the upper surface. Cut the prothallium in sections and each section will set up an independent existence; remove the sexual organs and others will be produced. If the archegonia are prevented from being fertilized the prothallium will live on almost indefinitely, waiting a chance to complete its office. Specimens have been kept in this way for seven years.

Taking these facts into consideration, the fern hybridizer usually sections the prothallium in such a way that each section bears only one kind of organ. Then by planting the section of one species containing only archegonia close to the section of another species containing only antheridia, if a new plant results it is necessarily a cross, provided the sections have not developed more of the lacking organs for themselves in the meantime. Careful work of this kind, however, is likely to bring results if the species used can be crossed. In general, ferns follow the same law as flowering plants, and species in the same genus are more easily crossed than species from different genera. Experiments along this line will afford the curious an interesting field for investigation.

An interesting instance of a fern hybrid's bearing upon botanical science is found in the case of the rare fern known as Asplenium ebenoides. In all botanical manuals this is set down as a good species, but there has always been a suspicion that it is a natural hybrid—a theory which its extreme rarity and irregular occurrence seemed to bear out. Its indicated parents were Asplenium ebeneum, and the walking fern (Camptosorus rhizophyllus) members of totally different genera. Acting on this suggestion Miss Margaret Slosson recently planted sections of the prothallia of these two ferns together, and had the satisfaction of raising, not Asplenium ebeneum, nor the walking fern, but true Asplenium ebenoides. Thus, after nearly fifty years, this fern has been proved to be really a hybrid.



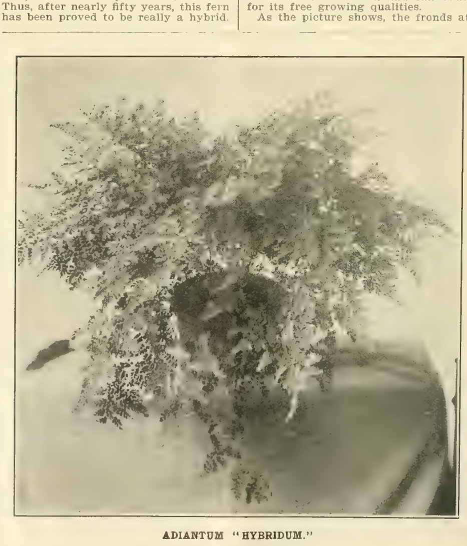
ADIANTUM CROWEANUM.

Grown by Peter Crowe, Utica, N. Y.

Adiantum Croweanum.

The fern illustrated originated with Peter Crowe, of Utica, N. Y., several years ago and has proved to be one of the best adiantums that can be grown for cut frond purposes. During the month of September, 1902, we had the opportunity of seeing this fern at Mr. Crowe's establishment, and can vouch for its free growing qualities.

As the picture shows, the fronds attain a good length, and their usefulness among cut flowers is enhanced thereby. At the time of our visit, there were some 40,000 plants on the greenhouse benches, and the fronds produced were shipped to various dealers throughout the country. John I. Raynor, wholesale florist in New York City, handles several thousand of the fronds daily, and disposes of them at 50 per cent. better prices than those of Adiantum cuneatum will bring.



ADIANTUM "HYBRIDUM."

Grown by John H. Ley, Good Hope, D. C.

Adiantum "Hybridum."

The adiantum shown by the photograph was raised and introduced into commerce by John H. Ley, Good Hope, D. C., several years ago, but being totally barren of spores, the stock was limited to a few hundred specimens. It is a very rapid grower, the specimen (about four feet through as illustrated) being planted on a bench from a two-inch pot in June, and potted into a 10-inch pan in September, 150 plants filling 600 feet of bench room. The fronds are very valuable for cutting, and realize a high price in New York.

The fern is a distinct cross between A. decorum and A. amabile.

C. W. W.

Philadelphia.

Warm Weather Causes Trouble.

The continued warm weather is causing lots of trouble to growers of Easter plants. Several have already sacrificed lots of bulbous stock. Hyacinths are probably in the worst fix. Around this city these plants are already in full bloom out of doors. Lilies are in bad shape with some growers. One large lot was cut and sent in to a commission man on Thursday, as they were too soft to keep longer. Many azaleas are also reported too far advanced. From present indications there will be a lot of cheap plants on the market next week, and those who can send their stock in in good condition will get good prices.

The retail stores appear to be more skeptical than ever about hydrangeas, and are buying these slowly, as they get so many complaints from customers about these plants.

In looking around, very little change is seen in the variety of Easter stock. Robert Craig & Son have, as usual, a very large supply of all kinds of flowering plants, among which are some well flowered Japanese cherries; also a very fine lot of azaleas, including many carried over plants, which this year have produced good heads of flowers. The firm is very strong in Crimson Rambler roses, spiræas and bulbous stock.

Wm. K. Harris has a very choice lot of plants, including large rhododendrons and a fine lot of azaleas; also a nice block of Bougainvillea Sanderiana, some clerodendrons, deutzias, dielytra and bulbous stock.

Jacob Becker has a choice lot of lilies, azaleas and roses in pots.

At Logan the Hugh Graham establishment has a tremendous stock of Easter plants—many more than their own store can use, so they are wholesaling azaleas, lilies, spiræas, etc.

Robert Scott & Son have as usual a grand lot of Crimson Rambler roses and lilies.

C. W. Cox deserves much credit, for after all the ups and downs of the past two years, he has on the market a good lot of spiræa and hydrangeas.

Jottings.

The business of the late Hugh Graham, including the retail store on Thirteenth street and the greenhouses at Logan, will be conducted as the Hugh Graham Estate, and managed jointly by Wm. Graham and Hugh Graham, Jr.

Evidently there is a lot of business ahead for florists. There never were so many social affairs booked before, during the three weeks following Easter as this year.

DAVID RUST.

WASHINGTON, PA. Joe Seaman, who has conducted a cut flower store at 117 South Main street, has sold out to Lloyd Swarthout. Mr. Seaman will assume the active management of the combined stores. Mr. Swarthout will move to 60 South Main street, has sold out to Lloyd devote the greater part of his time to the management of the Forrest greenhouses, which are being greatly enlarged.

Review of the Market

NEW YORK.—As is usual the week before Easter, there has been a decided falling away in the demand for cut flowers of all descriptions. This with the pronounced increase in the quantity of roses coming in, has had a telling effect on prices, and, notwithstanding that American Beauty dropped from 30c. to [illegible]c. each, they have accumulated from day to day, and there is more stock on hand than can be cleared out at that price even. Within the last few days we have observed that the street corner florists have been offering special American Beauty flowers, with stems three feet or more in length, that had been bought at $6.00 a hundred. All roses, except red ones, are coming in much more plentifully than they have been for a long time, and present indications point to a huge supply for Easter week. The number of General Jacquimenot roses grown for this market does not begin to compare with the quantity that used to be grown for Easter, and it looks now as if red roses would be at a premium next week.

Carnations have been selling very unsatisfactorily, and the low prices of last week still rule.

Bulbous flowers are again more plentiful, and except for Emperor narcissus there is no fixed price at the present time. The variety mentioned brings 3c. each, while all others can be had at any figure almost.

The sunny weather lately is responsible for a great many lilies being on hand this week, and some low figures have been recorded. Orders for Easter delivery are remarkably heavy, however, and a jump in the price may be looked for any day.

Violets are either giving out for the season or the growers are commencing to hold back a little, as the quantity coming in has fallen off considerably. Prices have not changed materially since last week, and what they will bring next week is problematical. The weather during the next few days will have everything to do with the supply of violets for Easter. Should it come on warm the quality will be impaired and values will suffer accordingly. Pansies, sweet peas and stocks are all very plentiful. The scarcest thing in this market at present is good smilax.

BOSTON.—Business has been rather quiet this week, and stock has been accumulating at the wholesale markets. Everything seasonable is in plentiful supply, and in most lines there is an overstock, though the supply is not so heavy as is usually the case at this season of the year. Roses are going harder, and it is especially difficult to move the better grades. In American Beauty and Queen of Edgely a limited supply of specials reach $40,00 per dozen, but $35.00 is about the average price, and at these figures it is not always possible to dispose of the daily receipts. No. 1 and seconds sell with more ease at from $16.00 to $25.00 per 100, while the smaller ones are cleaned out at from $3.00 to $8.00. Bride and Bridesmaid are more plentiful again, and do not clean up so readily as they did a week or two ago. Specials make $12.50 per 100, with No. 1 at $8.00 and $10.00, and seconds and smaller grades at from $6.00 down to $2.00. Ulrich Brunner are now in very good supply and clean up very well at from $4.00 to $12.50 per 100. General Jacqueminot are coming along faster and meet with quite a good demand; specials reach $25.00 per 100, with extras at $20.00 and No. 1 $16.00; smaller ones range from $8.00 to $12.00. A few Souvenir du President Carnot are coming in of fair quality, and do pretty well at $4.00 to $10.00 per 100.

Carnations continue plentiful at much the same values as last quoted. The enormous supply of bulbous stock continues unabated and prices continue very low. Lilies are very plentiful at $6.00 to $10.00 per 100, and lily of the valley is in oversupply at $2.00 and $3.00.

Single violets have shortened up considerably, and thus a better market has been created for the doubles. Princes range from 50c. to 60c. per 100, with a limited supply of fancy stock realizing [illegible]c. per 100. Primroses, pansies, sweet peas and such flowers in small bunches find a good market; and arbutus, which is now coming in very fast, sells well.

The plant trade among the growers of Easter stock is well under way, and orders in advance are well up to those of former years. Another large plant Easter is looked for. F. J. N.

CHICAGO.—For the past week the market has been above the average for this time of the year. Local trade has been fairly active, while shipping business has been brisk. The supply of American Beauty roses is increasing, but the prices remain the same as heretofore. The best flowers are bringing $4.00 per dozen. The supply of Bride and Bridesmaid is increasing slowly and one finds them fairly well cleaned up at the close of each day's sales. The best grades are selling at from $5.00 to $8.00 per 100. Liberty is not coming in as freely as could be wished; there is rather a shortage of the better grades of this rose. Sunrise and Mme. Abel Chatenay are selling at the same figures as last week.

Carnations are not over plentiful, and the price is a trifle firmer than a week ago, fairly good flowers are selling as high as $1.00 per 100, both in the local market and for shipping, while some of the fancy varieties bring more. The inferior grades are selling for a great deal less. Of bulbous stock there is not so much coming in as a week ago, the price remains the same. Some extra fine lilies are to be seen in some of the commission houses; these are selling for the same price as what the majority quote as their Easter prices. Violets remain about the same as at last report, and the green situation is unchanged. The supply of sweet peas is on the increase, but for some reason these flowers are not selling as well as in former years, nor is the price to the grower as satisfactory. R. J.

ST. LOUIS.—The retail florists of this city have little to complain of during the Lenten season, as nearly everybody in the trade reports business as being good, with plenty of funeral work almost every day. The question at present is: Will there be plenty of good stock on hand in both cut flowers and blooming plants for Easter? as a great trade is expected in plants, also in cut flowers. Lilies will be scarcer than last year, so say some of our local growers. But a great many lilies will be shipped in. We hear that roses are expected to be in big supply, as nearly everyone had been off crop at the same time; this should make the supply large. American Beauty will be in fair supply, so will Bride, Bridesmaid and Golden Gate. As to prices for Easter on these, it's a little to early to quote.

Carnations should be in big supply and of good quality. The white varieties will be the scarcest, as they have been all this season. The prices will no doubt hold up, as they have done all this Winter.

All kinds of bulbous stock will be in plenty; they always are. The Southern single narcissus is in the market now in large quantities, with little demand for it.

Violets will not be plentiful, as they are already coming in small, and the market will be shy on them this Easter.

The plant trade out in the West End, where most of the plants are handled, is in fine shape. At Weber's are found as fine a lot of Easter plants as one would wish to look at. Miller's stock is also in good shape, his show house being filled with the best in the market. Along Grand avenue, Walbart and Mrs. Ayers' places are the attractions with their fine and large blooming plants all ready for their Easter trade. Both claim that their business during Lent was very good; in fact, they had all they could do.

Otto Koenig and Fred Meinhardt are well supplied for Easter with blooming plants. In the southern part of the city Schray and Beyer, two of our largest growers, and in good shape to supply the trade with fine plants of all kinds. Sanders and Windler, who furnish most of the trade with Easter stock, are also well pleased with the outlook. ST. P.

INDIANAPOLIS, IND.—The market has recovered from the warm weather prevailing last week. Bulbous stock with the present weather can be controlled until the Easter rush. While there has been a great deal of anxiety over flowers for Easter there will no doubt be an abundance of all kinds of material, with the possible exception of carnations, which are now equal to the regular demand. Roses have moved along well, especially Bridesmaid and Bride. The prices remain about the same as during the past two weeks: $1.50 to $2.00 per dozen for Bridesmaid, Bride and Sunrise; Liberty, $3.00 per dozen; American Beauty, $2.00 to $9.00 per dozen.

Violets are smaller; $1.00 per hundred is obtained for the double ones; 35c. per hundred for the single. Wholesale prices vary from 25c. to 75c. per 100 for double and 25c. to 35c. for single, according to the market.

Carnations are holding their own in price; $3.00 to $4.00 per 100 for fancy grades and $2.00 to $3.00 per 100 for A No. 1 grades. The retailers have all the carnations in this market engaged.

Blooming plants are selling unusually well, and if the present time is an indication of the Easter plant trade the coming Easter will surely be a grand one for the sale of plants. I. B.

CINCINNATI.—As is usual, stock is always scarce before a holiday, and this year is no exception. I predict that Easter will find carnations very scarce in all markets. The flowers have been scarce all season, and it would seem that the more glass devoted to them, the scarcer they get. Stock of all kinds will not be what one might call plentiful, but as the time draws near we shall no doubt have more than we now expect. Prices remain as last week, and Easter figures will be the same as the quotations in the other large centers. E. G. G.

BUFFALO, N. Y.—Flowers seem to be between crops to quite an extent and though the demands are but moderate, excepting perhaps some bulbous stock, no surplus exists at present. Roses cannot be called plentiful, while carnations might be termed scarce. They further promise to be shy in quantity next week, so that stiff prices may result. If the weather keeps cool, there will be a nice lot of violets for Easter, and a fair lot of sweet peas. Smilax is scarce. Bulbous blooms promise to be plentiful; daffodils are now coming in from the South. VIDI.

DENVER.—Trade through Lent has been generally good. The weather has been very changeable and at times disagreeable for busines, but on the whole business did not suffer. The supply of cut flowers and plants has been very good, and the quality excellent. Funeral work has been in fairly steady demand the past month.

This year's outlook for Easter, in the plant line, is exceptionally good, though there is considerable grumbling heard about the lily crop. Those obtainable are good as regards foliage and flower, but terribly short in stem, and about all the tall ones available will be needed for church work. Azaleas are fairly plentiful and very good. Some Crimson Rambler roses seen at the Park Floral Company's greenhouses are the best ever grown here and should be a leading feature with this firm. Spiræas will be in good supply with all. Lilacs look good. Bulbous stock will be plentiful, if not in over supply.

The supply of cut flowers will be about equal to the demand, and should it fall short all the better, for plants are more satisfactory to handle in the rush. P. S.

LOUISVILLE, KY.—A peculiarity of the local market for this season of the year is the general shortage of good stock. The demand has been brisk during the entire Lenten period and at no time has there been much surplus of good roses or carnations. Even bulbous stock moves steadily and at reasonable prices.

The outlook for good stock for Easter is problematical, much depending on the weather. Reports show lilies are short. Bulbous stock is all outdoors and is readily affected by the weather. Azaleas, rhodendrons, hydrangeas, lilacs and plants of that class can be had in plenty. In cut flowers, roses and carnations will not equal the demand. Violets have entirely disappeared. A. R. B.

HARTFORD, CONN.—Business the past week has been quiet compared to what it was during the first part of Lent; in fact, we might say it is the quietest week we have had this season. Many orders have been taken for Easter, and the prospects are encouraging for a good trade if the weather is favorable. Most all kinds of stock will be plentiful excepting carnations, of which flower the supply will be short. At present stock of all kinds is plentiful, unless, perhaps carnations, and more of these could be disposed of if obtainable. Violets are not as good as they were a week ago; they are getting much lighter, and Easter will about wind them up for this season. Blooming plants have not been selling as well the past week. It is generally conceded that most of the plant buyers are waiting for Easter to make their purchases. J. F. C.

WASHINGTON, D. C.—Business here is still very slow. The weather is fine and stock plentiful, but somewhat poorer in quality. Violets are not nearly as good in color and size as last year at this time. Prices are still about the same as quoted two weeks ago. C. W. W.

Hartford, Conn.

Club Meeting.

The regular meeting of the club was held Tuesday evening. The notices were sent out by the president, and stated that the meeting was called for the purpose of investigating irregularities alleged to have been made by the secretary. This notice kept Mr. Coombs guessing until the meeting night. However, he was prepared to answer any question that might be put to him. There was a large attendance, and to the secretary's surprise, instead of being raked over the coals, as he expected, he was presented with a beautiful Masonic watch charm. The presentation was made by G. S. Osborn, and Mr. Coombs responded briefly, thanking the donors. On the face of the charm, which is of gold, is the Masonic emblem set with diamonds, and on the reverse side the inscription, "Hartford Florists' Club, to Jos. F. Coombs, 1903."

G. S. Osborn read a paper on "Red Spider," which was followed by a discussion. At the close of the meeting a social session ensued, and the members were entertained by a number of selections on President Wirth's phonograph.

X. Y. Z.

New York.

The Week's News.

There is a movement on foot among some of our largest growers and wholesalers of cut flowers to obtain a building that is large enough to make provision for the wholesale cut flower trade of the city. Members of the New York Cut Flower Co. and several commission men held a meeting in the Fifth Avenue Hotel on Friday, March 27, and we understand that a committee was appointed to look into the matter.

Everything looks favorable for a good supply of flowers for next week. If growers will only ship their stock in regularly, so that the dealers can take care of their out-of-town orders on time, instead of holding back and glutting the market on Easter Saturday there will be more satisfaction all round.

A committee from the New York Market Florists' Association went before Borough President Cantor on Friday afternoon, March 27, and asked his support in the matter of erecting a flower and plant market on the site of the old Clinton Market. Mr. Cantor expressed his willingness to give the project all the support in his power, and at the next meeting of the Board of Aldermen that body will be asked to authorize an appropriation of the necessary funds to construct a building suitable for market purposes on the site mentioned.

Ellwood Brandt, one of Madison's rose growers, has leased that part of Peter Crowe's establishment that is devoted to roses, at Utica, N. Y. The material for erecting an additional range of glass has been on the premises for some time, and Mr. Crowe will proceed to build at once. The new houses will also be operated by Mr. Brandt for the commercial growing of roses. Mr. Crowe having rented his rose houses will devote all his energies to the growing of his new fern, Adiantum Croweanum, which occupies a separate range of glass from that of the roses.

John Young is handling a choice line of plants for Easter, including genistas, geraniums and lilies.

Brooklyn retailers have long been accustomed to make a display of potted plants on the sidewalks in front of their stores at such times as Easter. The police will not stand for the sidewalks to be used for that purpose this Spring, however, and the florists feel that a lot of transient trade will be lost thereby.

Wm. Elliott & Sons are offering many choice plants at their twice-a-week sales. The stock this week has included good sized plants of genistas, in full bloom, camellias, roses and dracænas; also evergreen shrubs and magnolias.

W. Ghormley will handle a full line of Easter plants, and has leased, temporarily, the store at 56 West Twenty-eighth street, to have more room during the rush.

John Blaauw, of the wholesale nurseries, Boskoop, Holland, sailed on March 21 from Rotterdam, and will visit the trade on this side of the Atlantic during the month of April.

Visitors in town included C. Eisele, Philadelphia, Pa.; Peter Crowe, Utica, N. Y.; J. L. Dillon, Bloomsburg, Pa.; Wegand Bruss, representing Van der Weijden & Co., of Boskoop, Holland.

James Weir's Sons, whose greenhouses are located at Bay Ridge, Brooklyn, are among the favored ones with their crop of lilies. Some 30,000 Japan longiflorum were planted, and out of this number about one thousand only have had to be discarded. The rest are looking fine, and will produce a nice crop of flowers for Easter.

Other Easter stock grown at this place is composed mostly of azaleas, spiræas, hydrangeas, and acacias. A few Crimson Rambler roses are also grown. The foreman, Mr. Neumann, has everything timed about right and the lilies are being eagerly sought by prominent New York buyers.

Easter Prospects.

Philip Conway has a house of Crimson Rambler roses in excellent condition for Easter.

John Heidenreich has a large supply of bulbous stock. His azaleas, cinerarias and other plants surpass those of former years.

Baur & Smith have a large quantity of carnations sold for Easter.

A. Weigand & Sons report that the prospect for a large Easter trade was never better.

Bertermann Bros.' greenhouses are filled with the usual supply of fine blooming plants.

Smith & Young are cutting a quantity of A No. 1 La France and Souvenir du President Carnot roses.

Henry Reiman is well fortified with alpine violets, Crimson Rambler roses, azaleas and lilies. He is at work on a nice new store, which he hopes to complete in a few days.

I. B.

Cincinnati.

News of the Week.

The progressive euchre given by the Florists' Society on Thursday evening last was a grand social success, and the committee in charge, viz., C. J. Ohmer and J. W. Rodgers, deserve much credit. The prizes were very pretty and useful, the consolation prize especially, which was $5.00 in gold. The first premium was a Rookwood vase, donated by Louis Kyrk. The $5.00 was given by Mr. Lober. Wm. Murphy, A. Sunderbruch's Sons and J. M. McCullough's Sons all made donations.

The writer went before the Fall Festival directors Thursday, and was successful in getting them to adopt the schedule, and also to appropriate $1,000 to be used as premiums for a floral display in the foyer of the Music Hall in September. The table decorations will occur at the second exhibition. The first prize will be $200.00; second, $150.00, and third, $100.00. These will certainly be worth competing for. Competition is open to all. We should like to see our sister cities represented in this display. The schedule will be issued and mailed soon. If those who are overlooked will address the writer, I will see that a copy is sent.

John Walker, of Youngstown, Ohio, passed through the city on his return from Louisville.

Mr. Smith, of Smith & Fetters, Cleveland; and H. A. Dreer's representative were callers.

Ed. Bissell left the Huntsman place on Thursday to accept a position with the Marion Floral Co., of Marion, Ind.

E. G. GILLETT.

Kansas City.

Spring Prospects Bright.

The florists in this section are glad in the assurance that, from present indications, Spring business will be far in advance of that of 1902. In several instances extensive additions are already under way. The recently incorporated firm of Rock-Heite Co. is working on two 200-foot carnation houses; and Nelson Jarrett has purchased land adjoining his present range for future improvements.

News Jottings.

Frank Ross has opened a larger store in the Hall Building.

Mrs. Edgar, on Eleventh street, has found it necessary to add a larger show window to her store.

Miss J. E. Murray will soon move to a larger building more centrally located than her former place.

All in all, there has been more business activity shown since the first of the year than has been seen for many seasons.

In the nursery line the conditions have the same upward tendency. There is a heavy demand for shade trees principally elms, hackberry and har and soft maple, as these sorts are generally used in the newly surveyed parks and boulevards. A shortage has already been experienced in some lines of flowering shrubs.

More interest has been taken in hardy perennials than has been known in recent years.

Christmas prices have clung to carnations and roses up to the presen time. Stock is of good quality, but no so plentiful.

Lilies for Easter will not be plentiful the disease played havoc with whole crops on some establishments, and in others we find the bulbs were generously mixed with a very inferior rough-growing variety, vastly differen from Harrisii or longiflorum. The unwelcome "stranger" has not been identified in this locality. Other bulbs ar proving of good quality.

A. Newell has been quite ill for a week.

S. Murray leaves for Eureka Springs Ark., hoping to build up after his lon illness.

Recent visitors included J. M. Gasser, Cleveland, O., and James Hayes Topeka.

E.

Buffalo.

Easter Outlook.

Easter prospects now engross fu attention in planning and preparations for which the retailers are enterin with the confidence of a good demand How the supply of cut blooms wi show up is, of course, indeterminate but it is believed such will be none to large. Locally there seems to be th usual space given to plant stock: though a noticeable comparative shortage in lilies can be seen, mostly in lack of better development; fewe plants fully ready in cases, and buc and blooms not so free on the individual plants.

Chas. D. Zimmerman shows som nice imported lilacs, both purple an white, grown and flowering at a heigh of six feet, in pots ten-inch and upward. Some Dicentra spectabilis, als imported, forced into well proportioned bloom in eight inch pans, ar attractive. Stephen J. Rebstock, a Williamsville, boasts some specime azaleas and C. F. Christensen shows large lot of bulbous stock and we done azaleas, with lilies in moderat lot. Palmer & Son's Lancaster plac will turn out its usual lot of longiflorum lilies. These will run from tw to six blooms per plant, in height medium. A good lot of some hundred of azaleas are also ready, roses, etc Keitsch & Son have well done Harrisi this year, a good lot of azaleas an some nice cinerarias.

L. H. Neubeck shows a good assortment in plants. There is being specially produced a batch of antirrhinun for cutting, more or less sweet pea and mignonette, with carnations moderate.

S. A. Anderson has some attractiv white lilac in flower; roses and lilies i fair shape.

Wm. Scott has a batch of cinerarias a fine strain, a good lot of Crimson Rambler well set with blooms; bu lilies show the extreme short growth and undeveloped conditions in a marked degree. Bulbous stock here is always well grown.

J. H. Rebstock has an attractive specialty in a goodly batch of importe stock in hybrid tree and standard roses in fine flower that should prove sellers. Some Crimson Rambler o good quality; also azaleas. Longiflorum lilies, of medium height, are timed right.

W. F. Kasting thinks lily plants in pots will be plentiful enough to g around. He offers good hydrangeas culled from various out-of-town sources, and is handling some azaleas in a jobbing way.

Rachel M. Rebstock has installed a tile setting for the show window o her store.

Department stores during the past week made special sales of hardy roses, imported stocks, at bargain prices.

Salt Lake City.

By the consolidation of the Salt Lake Floral and the Huddart Floral Company, which was effected March 19, J. S. Bransford, prominent in mining circles, becomes identified with the floral interests of the city. The deal was consummated March 18, Mr. Bransford purchasing the interest of Senator W. A. Clark, of Montana, in the Salt Lake Floral Company.

The consolidated interests will be reincorporated under the name of the Salt Lake Huddart Floral Company. Mr. Bransford will be president of the new company and P. T. Huddart, heretofore manager of the Huddart Company, will act in the capacity of manager. The other officers have not been chosen.

The consolidation has already become effective, and both the up-town houses will be continued as heretofore. The greenhouses at Twelfth South and State streets will be devoted more exclusively to the production of roses. It is the intention of the new company to largely increase the supply of roses and other flowers in the State.

Senator Clark, who has been backing the Salt Lake Floral Company, is said to have been interested to the extent of between $50,000 and $60,000 in the local concern. He had purchased extensive grounds at the State street establishment, which leaves the new consolidated firm in possession of both that property and the up-town stores. Mr. Bransford has assumed Senator Clark's interests while Mr. Huddart will have the management of the business. Senator Clark became interested in the floral business in this city two years ago, while the Huddart concern was established three years before.—Tribune.

Newark, N. J.

Charles F. Lee, a florist, 60 years of age was knocked down in his greenhouse on March 24 by some men who pretended to buy plants from him and robbed of $60.

ster Prospects.

With bright and Spring-lik ather with us, trade was never bet- than at the present time. The de- nd in some cases exceeds the sup- . and towards the close of the day re is considerable running from use to house to get stock to fill shipg orders. Easter business promises l, with the grade of stock above the rage. As near as can be learned at present time, there will not be too ch stock of any kind, but just about ugh to meet all demands. The lily ation has not undergone any ma- al change in the past week. While he growers think there will be ugh lilies to meet all demands, oth- believe there may be a good aver- supply, but the consensus of opin- is that there will not be any too ch first-class stock.

ong Growers.

A trip to the growing establish- nt of Poehlman Bros. found every- ng in first-class shape. They sell ir own stock on the Chicago market, are noted for their extra fine roses. s season Bride and Bridesmaid have n very good both in color and qual- Their American Beauty are as d as are to be found at any place or around Chicago. Of carnations, the newer kinds are grown. Some ra fine stock of Enchantress, Gov- or Wolcott and Marshall Field was n. Several houses are devoted to ysanthemums every year. The vari- s grown are numerous and the stock nts on hand are in excellent condi- . They follow their chrysanthe- ms with carnations, mignonette, sies and bulbous stock, including s. The brothers are also noted for ir extra fine lily of the valley. They e been doing quite a trade in forced c this season, and at present have finest that is received on the mar- . They are busy building one of the gest ranges of houses that will be ed around Chicago this season, and tear down and remodel part of their sent range.

visit to J. F. Kidwell & Bro.'s es- lishment found them busy getting ngs in shape for the Easter and ing trade. Their place is chiefly oted to general plant stock in which y have an immense trade. Note- thy among the Easter stock were rangeas and spiræas; these will be right. Their lilies also are in fine dition.

L. Simmons, of 342 West 63d street, rts trade as being good with him season.

he George Wittbold Co. has been ng extensive decoration for the Eas- openings of some of the large de- tment stores. In these displays ar- ial flowers are principally used.

Coatsworth, of Benthey & Co., has rned from a Southern trip taken he interests of the firm.

isitors in town included: H. E. Phil- . Winnipeg, Man.; Geo. M. Kellogg, sant Hill, Mo., and H. V. Hunkel, waukee.

ROBERT JOHNSTONE.

Louisville, Ky.

fter having her Fourth street store ed for a week, making the neces- arrangements, Mrs. C. B. Thomp- had a grand opening on March 30. h music and souvenirs she attracted passing throng. It is a beautifully nged place, and most admirably ted.

Tarrytown, N. Y.

The regular monthly meeting of the Tarrytown Horticultural Society was held March 26, President David McFarlane in the chair. A communication from Arthur Cowee, of Berlin, N. Y., offering a prize of $4.00 for the best 25 spikes of gladioli at the November show, was received and accepted. Daniel Taxter was elected to active membership.

Howard Nichols was awarded first prize for the best dozen roses; Joseph Bradley honorable mention for a vase of antirrhinum; Thos. A. Lee honorable mention for a vase of carnations. A discussion on the exhibits was taken part in by Messrs. Nichols, Lee, Ballantyne, Smith, Bradley, McFarlane, Mooney, and Scott.

The schedules for November exhibition are now ready and can be had on application to E. W. Newbrand, secretary, Tarrytown, N. Y.

The following prizes were offered for competition at the regular monthly meetings: Silver matchbox, April, by Mr. Scott.; pipe, herbaceous flowers, May, by Mr. Ballantyne; umbrella, herbaceous flowers, June, by Mr. Nichols; umbrella, herbaceous flowers, July, by Mr. John Briggs; book on gardening, herbaceous flowers, August, by Mr. Newbrand; a new hat, herbaceous flowers, September, by Mr. J. W. Smith; rubber boots, herbaceous flowers, October, by Mr. F. Gibson; rubber coat, best dozen American Beauty roses, November, by President McFarlane; ornament, best dozen carnations, three of each variety, December, Mr. J. Bradley.

CLEAR CYPRESS ABSOLUTELY FREE OF SAP

An expert rose grower grows good roses.

He has made a close study of roses and is a specialist.

His whole thought and attention are devoted to roses.

Our whole thought and **attention** have been given to greenhouse building material. We have had **years** of experience in supplying material to critical practical growers.

We are specialists in Greenhouse Construction, just as the rose grower is a specialist in roses.

We can serve you much better than one lacking this experience.

SEED TRADE REPORT

AMERICAN SEED TRADE ASSOCIATION

Walter P. Stokes, Philadelphia, President; C. N. Page, Des Moines, Iowa, Vice-President; C. S. Burge, Toledo, Ohio, Second Vice-President; S. F. Willard, Wethersfield, Conn., Secretary and Treasurer, A. N. Clark, Milford, Conn., Assistant Secretary.

OUR SEED EXPORTS.—The business of exporting seeds increased somewhat during 1902, in which year the United States sent to foreign markets shipments worth $8,027,824. Compared with the record for 1901 there was a gain of $1,643,009 in value. A larger export trade in flaxseed contributed to this growth.

INDIANAPOLIS.—The corporation known as J. A. Everitt, seedsman, has been reorganizezd, new members admitted, and an increase of capital stock ordered from $10,000 to $150,000. The stockholders of the new corporation are J. A. Everitt, W. H. Everitt, W. A. Eshbach, R. F. Hamilton and E. G. Haspel. The last four are the new members.

DES MOINES, IA.—Two more stories are to be added to the Iowa Seed Company's building at Eighth and Market streets. The increase of space is demanded by the big increase of business in the mail order department.

In addition to the increase in the space of the warehouse, fourteen new greenhouses will be erected this Summer to complete the original plans of last year, when sixteen were erected. Plans for the addition to the warehouse are now in the hands of the architects.

European Notes.

Now that the trade in garden seeds is beginning to fall off, the seedsman is looking for a good time in the agricultural department; but unfortunately his wishes are at present not realized. Farmers are waiting to see what the weather will do next before settling their wants. Trade in grasses and clovers is very slack, and business all 'round needs a general enlivening.

Isolated cases of turnips for seed being already (end of March) in bloom, while revealing their remarkable forwardness, warns us of probable loss in the near future. At the same time, crops have stood the mild Winter so well and are looking very healthy that a small loss would do no great harm.

EUROPEAN SEEDS.

Transplanting Deciduous Trees Late.

It often occurs that the transplanting deciduous trees late in Spring, after e leaves have pushed to some extent, desirable, though, of course, not to recommended. In such cases, the mmon practice, but not the correct ne, is to strip off every leaf, and une back the branches. The pruning art is all right, but not the stripping way of all the leaves. In fact, the aving on of many of the leaves is lmost necessary to be successful. The aves exercise an influence in promot- g root action; and the chances of be- g successful are very much better ith leaves than without them. Not many; say, a fourth of what the e had will be about the right number. hen every leaf is stripped off, it is w work for the tree to recover. The tored up sap will have been used up forming the leaves removed, and ere is but little left for the second ffort. With a fourth of the leaves left n something remains to carry on the ork of growth. But these untouched aves need care. The disturbance of ransplanting has left the roots in a sition unfitting them for immediate ork in the way of supplying moisture r the leaves. This is overcome by ooding the soil with water for a few ays, and by syringing the foliage with ater for the same period. As soon as he foliage stands without wilting, the ooding should cease, and syringing is ss necessary.

English Walnuts from Buds.

Of the three common walnuts, the nglish, black and butternut, the former is the most valued for its nuts. It s propagated almost entirely by sow- ng the nuts, but a writer in an ex- hange says he has had good results rom budding, better than from graft- ng. As his notes imply, he uses for tock either the black walnut or the utternut. It is probable that the latter species is the better one, resembling he English in general appearance more han the black, and being a rapid rower. Presumably the budding hould be done in Summer at the usual udding season.

Grafting Catalpas.

As everyone who has bought a Catal- a Bungei can see, the way it is in- reased is by grafting. Catalpas start grow so very late in Spring that here is yet ample time to do the work. elect a straight stock of either the C. ignonioides or C. speciosa, and graft t at whatever height desired. A eight of about six feet is a very good ne. This species, or, more properly, ariety—for it is claimed to be but a orm of C. bignonioides, and not C. ungei at all—and the golden-leaved ne, are the only two which are grafted, the other sorts in common cultiva- ion growing readily from seeds.

Catalpas are possessed of singular vi- ality. Some years ago it occurred hat in transplanting a lot of them bout two dozen were forgotten and eft exposed to the air, root and tops, for a full week. They were then lanted, and to the surprise of those nterested, all grew. Since that time ther instances have occurred showing hat, in nursery parlance, the catalpa 'is hard to kill."

The almost globular growth of C. ungei makes it useful in many situa- ions where such a tree form is in lace.

Camellias Outdoors.

From what is known of the ability of many evergreens to withstand the Winter in sheltered positions which would not exist in exposed ones, there is much to encourage those who delight to have in their collection something uncommon. The common camellia is such a plant. Common in greenhouse collections, it is not hardy enough for outdoors in the North, but in the bordering States of the South it could be oftener met with than it is. Along the south coast of England it is a hardy evergreen, though not known as such by a great many. It often endures 20 degrees of frost there for a day or two at a time. The P. J. Berckmans Co., of Augusta, Ga., say it is hardy there in the central part of Georgia. Just see what a wide range of country that gives in which the camellia can be treated as a hardy shrub! In Europe the single ones seem the hardiest of all.

There are large bushes of these plants near Mobile, Ala., which give an abundance of seed every year.

We would not want to live without the bright sun we usually have in Winter, yet to have the camellia do its best in doubtful localities it should be planted where it would be in the shade at that season. A writer in the English Gardening Illustrated says the camellia is hardier than the laurel, Cerasus lauro-cerasus. This seems strange, considering how prominent the laurel is, while the camellia is not. Should it be true here as in England, then we could grow it in Philadelphia, for the laurel spoken of does well there when in a shady sheltered place.

Hardiness of Chamaerops Excelsa.

Your correspondent, Abe Clemo, in his recent notes gives additional facts regarding the hardiness of the Chamærops excelsa. In the notes of mine, which brought the replies from several correspondents, I gave 15 degrees of frost as what I knew the palm had endured, and it is of great interest to learn that it has been known to pass through eight above zero unscathed.

There is no question that when conditions are right this plant, as well as others, will endure much more cold than is usually supposed, and in the case of this chamærops it would probably be found that it could be grown successfully outdoors in States but little south of Pennsylvania. What such subjects require is a high situation, where the wood will ripen well, a place sheltered from the wind and sun in Winter; and, further, that care be taken to see that when Winter sets in it finds the plants with the soil about them in good, moist condition, and this moisture must be secured all Winter, if even by artificial means.

Recently, in an English horticultural paper, I noticed that in many parts of England the common laurel of that country, Cerasus lauro-cerasus, had been killed the past Winter. In my garden, sheltered by a board fence and fairly free from the sun in Winter. I have had one pass through two Winters uninjured, excepting partly scorched leaves. In the same situation, with not a leaf hurt, is Photinia serrulata and Cerasus lusitanicus, two well-known, broad-leaved evergreens of the South of England gardens. And in both Winters zero weather has been met for a day or two.

75,000 CHOICE PERENNIAL PHLOX 75,000

ONE OF OUR LEADING SPECIALTIES

Strictly first-class varieties, distinct and decided colors; strong, field-grown plants that were cut back and potted up into three-inch pots late in the fall, with from 3 to 6 eyes, that will make a better display of flowers than plants dug from the field; this stock must not be confounded with small winter propagated plants, such as are usually sent out.

Athis, deep pink, overlaid salmon, crimson eye.
Andreas Hoffer, a fine early white.
Aquillon, carmine rose, shaded salmon, crimson eye.
Bridesmaid, pure white with large crimson eye.
Beranger, white, suffused pink, crimson eye.
Blanc Nain, large dwarf white.
Bouquet Fleur, white, with deep rose eye.
Crystal Palace, white, with lilac markings and center.
Cross of Honor, magenta, bordered white, in the form of a Maltese cross.
Cyclon, white, suffused rosy lilac, dark rose eye.
Champs Elysee, fine rich purplish crimson.
Duguesclin, white with dark crimson center
Eclaireur, purplish crimson, very bright, with light halo.
Esclarmonde, lilac suffused white, deep rose-colored eye.
Etoile du Nord, purplish crimson.
Eugene Danzenvillier, lilac with white edge and center.
Faust, pure white with cherry-red eye.
Henry Murger, white with bright rose eye.
Jeanne D'Arc, a fine late white.
Jules Finger, tender rose with deep rose eye.
Lilipot, bright magenta with crimson eye.
La Fondre, deep purplish crimson.
La Nuit, deep purplish crimson.
La Vague, soft rosy pink with red eye.
Lothair, salmon-red with carmine eye.
Mlle. Marie Kuppenheim, a good dwarf, pure white.
M. Marey, salmon rose with deeper center.
Marquis de St. Paul, deep rose, overlaid salmon.
Michael Cervantes, pure white with bright red eye.
Mrs. Dora Umgeller, rich deep rose; a strong variety.
Moliere, salmon rose, deep rose eye.
Nettie Stewart, pure white, occasionally marked rose.
Ornament, rosy magenta with crimson eye.
Professor Schlieman, salmon rose with carmine eye.
Peach Blow, delicate pink with white markings.
Pantheon, fine deep salmon rose, free and effective.
Pacha, deep rose with bright eye.
P. Bonnetin, magenta overlaid salmon.
Robert Werner, tender rose with deep rose eye.
Semiramis, purplish magenta
Simplon, white suffused lilac, dark rose center.
Sylphide, light rose and white, with deep center.
Schlossgartner Reichenau, bright rose, dwarf and free.
Sunshine, salmon pink with deep red eye.
Thebaide, dwarf salmon red with crimson eye.
Wm. Muhle, salmon pink with dark crimson eye.
Zouave, largest purplish crimson, red eye.

Any of the above varieties, 75c. per doz.; $6.00 per 100; $50 per 1000

THREE CHOICE RED PHLOX

VARIETIES THAT ARE ALWAYS SCARCE

COQUELICOT, a fine pure scarlet with deep carmine eye
JOCELYN, bright salmon red, very brilliant
MATADOR, Bright orange scarlet, cherry-red eye
} $1.00 per doz.; $8.00 per 100

Figs.

Nurserymen find a growing demand for figs. The fact that, whether grown in the open ground and buried in Winter, or grown in a tub, delicious fruit is assured, is leading many to ask for the plants who never before took an interest in them. These bushes are easily increased by hard wood cuttings set outdoors at this season of the year; also by layering the young shoots in Midsummer. A good point in favor of growing the fig is that it is the better for not having too much root growth. This is why the plants do well in pots, or tubs, and why the digging up and burying them in Winter is an advantage.

Plants Winter-Killed.

Kindly give us your opinion as to the cause of freezing down, and the killing, to an unusual extent, of outdoor shrubs, roses, etc., this Winter along the New England shore. Is it due to the first sudden and hard frost which approached us in the latter part of November; or is it through the frequent changing of the temperature through the Winter? A. & M.

—It is difficult to say what has caused the injury of which our correspondent writes. We presume the weather conditions have been alike in Massachusetts and Pennsylvania, yet in our case we never knew of so little injury in Winter. Practically there is none whatever, everything being in first-class condition. In the Fall we had heavy rains, and these also occurred occasionally all Winter, and in the writer's experience heavy rains in the Fall almost ensure safety of stock in Winter. With plenty of water in the soil, trees rarely suffer in Winter here.

It is conceivable that early Fall rains may prolong growth of branches, leaving unripened wood which freezing would kill. Alternating periods of warmth and cold will also cause injury in Winter. So will dryness of the soil.

From what you say, it is probable that late growth was caught by the first hard freezings, and that this and the alternating heat and cold of Winter are the chief causes of the loss of which you speak. It has been many a year since Spring found our trees and shrubs in such excellent condition as they are this season.

THE FLORISTS' EXCHANGE, 2 Duane Street, N. Y.

Hail Storm in Detroit.

On Friday, April 3, a hailstorm struck Detroit and district, doing considerable damage to greenhouses.

In Woodmere the storm was severest. Charles Warncke, the florist, lost about 2,000 lights of glass in his greenhouses, and it is estimated that his loss will amount to $800. Many plants were ruined by the falling glass and hailstones. A. W. Steincke & Son, Woodmere, were also heavy losers. Their greenhouses were damaged to the extent of $800. Gustav Knoch lost about $200 worth of glass and plants, while Beard Bros., on Fort street, suffered to the extent of $500. Anton Kaier's greenhouses were shattered, and it is estimated that it will require at least $400 to put them in repair.

Passing over Woodmere, the storm headed in the direction of Greenfield, where Frank Brown's greenhouses were assailed. Between 200 and 300 lights of glass were destroyed and many carnation plants badly cut. S. Taplin, at Fort and Twenty-fourth streets, suffered about $400 damage.

Thompsonville, Conn.

D. Wm. Brainard held his annual display of Easter plants and flowers April 7 to 11, inclusive. His new office and salesroom adjoin his greenhouses.

Minneapolis.

The organization of the Minneapolis Florists' Club was completed at a meeting held Thursday, April 2. The club has about forty charter members.

BENJAMIN CONNELL
WEST GROVE, PA.

NEW WHITE CANNA MONT BLANC

The Greatest Novelty in Cannas

MONT BLANC will become one of the most popular Cannas for bedding purposes; it contrasts so beautifully with the crimson varieties, and grows so even in beds. It has ample bright green foliage; the flowers have fine form, the spikes are large, entirely erect and are borne just the right distance above the foliage.

Potted Plants, 75c. each; $7.50 per Dozen; $50.00 per 100.

GREAT REDUCTION

On the best list of Cannas ever offered; **50 Varieties,** all different shades; **strong healthy roots. Our Cannas never kept so well.** Prices have been lowered **25 per cent.** to reduce surplus. This offer good for a short time only. No order accepted for less than 100 roots, or 10 of a kind, at these prices.

The Princess of Wales Violet

Violet growers cannot afford to to be without this grand and popular variety. Growers in the vicinity of Boston know that this Violet is rapidly and surely becoming more popular and sells for higher prices than any other variety, either double or single, growers in other sections have a great opportunity for taking up and growing this variety.

I have the largest and healthiest stock in the country and am booking orders NOW for strong young plants for April and May delivery, at $2.00 per hundred; $15.00 per thousand. 500 at thousand rates.

FOUNDED IN 1888.

THE FLORISTS' EXCHANGE

A Weekly Medium of Interchange for Florists, Nurserymen, Seedsmen and the Trade in general

Exclusively a Trade Paper.

Entered at New York Post Office as Second Class Matter

Published EVERY SATURDAY by
A. T. DE LA MARE PTG. AND PUB. CO. LTD.
2, 4, 6 and 8 Duane St. New York.
P. O. Box 1697. Telephone 3765 John.

REGISTERED CABLE ADDRESS:
Florex, New York.

YEARLY SUBSCRIPTIONS.

To United States, Canada and Mexico, $1.00. To foreign countries in postal union, $2.00. Payable in advance. Remit by Express Money Order, draft on New York, Post Office Money Order or Registered Letter. The date on the address label indicates when subscription expires.

BINDERS.

The publishers can supply binders which will hold the papers for one complete volume, keeping them in perfect order for ready reference. Price, postpaid, $1.25.

ADVERTISING RATES.

Per inch, $1.25. Special positions extra. Send for Rate Card, showing discounts on continuous advertising.

For rates on Wants, etc., see column for classified advertisements.

Copy must reach this office not later than Thursday to secure insertion in issue of following Saturday.

Orders from unknown parties must be accompanied with cash or satisfactory references.

ILLUSTRATIONS.

Electrotypes of the illustrations used in this paper can usually be supplied by the publishers. Prices on application.

BOOKS.

The publishers of The Florists' Exchange are headquarters for all standard books pertaining to the Florist, Nursery and Seed Interests. Send 2c. stamp for complete descriptive catalogue.

In addition to galvanizing iron-framed tables and beds, The Lord & Burnham Company intend to galvanize the angle iron eave plate in commercial greenhouses at a slight extra cost whenever the owner desires it.

The firm of H. A. Dreer, Philadelphia, has sent direct to Belgium a consignment of Pandanus Sanderi, to be exhibited at the Great Quinquennial Exhibition at Ghent, which takes place this month. The plants have arrived in excellent condition, proving their fine shipping qualities, and will occupy a space of 60 feet at the show.

American Park and Outdoor Art Association.

The use of buildings, landscapes and fences, especially along the lines of railroads and in our larger cities, for advertising purposes, seems to be on the increase, and to be degenerating into an abuse. The American Park and Outdoor Art Association has inaugurated a movement to check the tendency. Cities and towns are being urged to adopt ordinances imposing fines for advertising on electric light, telegraph, telephone and street car poles, trees and tree boxes. Laws have been prepared for introduction into the State legislatures to prevent the pasting, painting, branding, stamping, or placing of advertisements on any building, fence, bridge, gate or other object upon the grounds of any of the State institutions; or of those of a private citizen or corporation without the written consent of the owner or tenant. Such a bill introduced into the Pennsylvania Legislature by the Hon. Leslie Yates, of Philadelphia, at the request of the association, has now become law.

The general adoption of such ordinances and law will tend to do away with the present disfigurement of the landscape and to give greater encouragement to those individuals and corporations disposed to aid in the artistic development of our urban and rural life. The association has likewise taken up the question with the Federal Government with a view to having Congress enact similar legislation. In pursuance of the same general plan, the association addressed a letter to the presidents and officers of the railroads of the country, calling their attention to the steady development of landscape work in parks, cemeteries and private grounds, growing out of a more intelligent and cultivated taste in such matters, and suggesting that the railroad managers of the country consider the question of beautifying the grounds, buildings and bridges about the stations and terminals by careful planting. In its letter the association said:

"Many roads have already begun such improvements. We might mention a dozen companies whose station grounds and bridges have been improved by ornamental planting and that encourage their employees to make the property of the road as pleasant as possible to the public eye. Unsightly buildings and sheds can, in time, be entirely obscured and the grounds about the station can easily be made attractive and artistic at small expense by the planting of native trees and flowering shrubs."

Manures for Chrysanthemums.

A committee of the National Horticultural Society of France was appointed in 1901 to act with a similar committee of the French Society of "Chrysanthemists" to ascertain by practical experiment what are the best artificial manures to employ in the culture of chrysanthemums.

A report was presented to the National Horticultural Society in December last by M. Georges Trauffaut giving the principal results of the experiments carried out for these objects. Of these we propose to give a brief summary, based on the report published in the Journal of the Society.

Nine cultivators, scattered over as many districts of France, first all submitted for analysis samples of the soil they intended to use, no manure of any kind being added. Each of the nine growers experimented with a single variety, Madame Gustav Henry, a variety of moderate vigor, and with pure white flowers. M. Nonin alone chose two varieties, viz., Madame Gustav Henry and Mlle. Laurence Zédé, a more vigorous variety.

The plants were all grown in three different ways—1, plants allowed to form three stems; 2 plants with six stems; 3, plants grown without any disbudding. Twenty-four plants were grown in each of these three ways. Each grower thus had seventy-two plants under observation, the total number being about one thousand.

Of the twenty-four plants observed by each cultivator in each of the three sections, four received no manure, and served as control plants; four received a complete manure; four a similar manure, but in double quantity; four a complete manure with no nitrogen; four a complete manure with no potash; four a similar manure from which the phosphoric acid was eliminated.

The manures were mixed with the potting soil in April, and, from August onwards, they were given in the form of solution.

The "complete" manure had the following composition: Fish guano, 25 per cent.; dried blood, 16 per cent.; sulphate of potash, 24 per cent.; double superphosphate, 35 per cent.; the analysis of which gave four-fifths nitrogen, eleven-twelfths potash, fifteen-sixteenths phosphoric acid.

The soluble manure consisted of phosphate of potash, 54 per cent.; nitrate of soda. 46 per cent.; or nitrogen, 6.9 per cent.; potash, 14.04; phosphoric acid, 20.52.

The quantity used was at the rate of nine hundred grammes to one hundred kilogrammes of soil. The liquid solution was used in the proportion of two grammes to one litre of water. Each experimenter undertook to present to the Congress at Angers, in November, 1902, at least eighteen plants; that is to say, one specimen illustrative of the mean result obtained in each series, and each experimenter acted up to his obligation. There were thus shown at Angers one hundred and eighty plants arranged in three rows, and each appropriately labeled.

The principal objects of these experiments was to show by growing in sterile soil (white sand), the influence of nitrogen, potash and phosphoric acid respectively. The object of the other experiments was: 1, to show the influence of the complete manure in soils of varied character, but of known composition; 2, to study the influence of climate or season on the action of the manures, and the cultivation of one and the same variety.

We cannot give the full details of this most interesting and important series of experiments, suffice it here to say, that the most successful result, as tested at the end of the experiment, was obtained where a double dose of the manure was employed, then came the plants treated to a single dose of complete manure; next in descending order, plants grown without potash, without nitrogen, and the worst of all (except, of course, the umanured plants) were those plants which had no phosphoric acid.

Phosphoric acid is thus shown to be of great importance to chrysanthemums, and as necessary to the formation of chlorophyll. Plants deprived of this ingredient had yellow foliage and a weak habit.

Without potash, the plants produced long weak stems, broad, thick, but flabby leaves, falling off from the least cause. The flower stems were large, hollow, but limp; the flowers large, but of bad shape.

When nitrogen is absent the plants are feeble, chlorotic, the leaves small and thick, the stems of small diameter, the flowers few in number, hollow in the center, and of small size.

M. Truffaut, in summing up the results of this grand series of experiments, advises cultivators to prepare a good compost of two-thirds sandy loam mixed with leaf-mould, and to submit the compost to a chemist for analysis. The chemist will then be able to ascertain if the requisite elements are in due proportion or not, and to advise accordingly.

Nitrogenous manures, it is found, should only be applied in small proportions, as plants grown with an excess of nitrogenous manure are more subject to the attacks of rust.

Nitrogen is most conveniently applied by means of dried blood, horn shavings, or guano in the requisite proportions; potash is best applied in the form of sulphate; and bone phosphate yields the necessary phosphoric acid. Soluble manures are requisite in the case of plants cultivated in pots from the middle of August.

As to climate, there was a difference of three weeks in the growth of plants grown at Lille and at Avignon respectively. M. Truffaut rightly says, that so far as practical details of cultivation are concerned a series of well-conducted experiments is of more value than ten years of discussion at congresses. But it must not be forgotte that congresses are necessary, in ord to secure that the knowledge obtaine from the experiments shall be disseminated among a class of persons n given to trouble themselves to rea technical papers.

M. Truffaut may be warmly congratulated on the successful results the experiments, and a debt of grat tude is due to him and his collab rators.

We may suggest, in conclusion, th the experiments be now extended, an that an analysis of the plants then selves made at the beginning, in t middle period, and lastly at the flowe ing stage.

We have accumulated a good deal knowledge of the chemical compositi of the soil, and also of the dead pla when cremated. What we want no is a fuller and clearer knowledge what the living plant does in the several stages of its career, and to th end an analysis of the plant as grow under varied conditions, and at di ferent periods in its life history, is quisite. M. Truffaut, who knows well the requirements of the cas might be solicited to undertake supervise these further experiment and the resources of the several chry anthemum societies could not be to better use than by furnishing t requisite financial assistance.—Ga deners' Chronicle.

Obituary

J. Frank Greene.

As announced in last week's issue, Frank Greene, of the firm of Greene Underhill, florists, Watertown, N. died March 29.

Mr. Greene had been suffering fro poor health for several years, but h last sickness was of very short dur tion.

Deceased was the son of the late W. Greene and was engaged in t florist business during his life. He w with his father under the firm name Greene, Son & Sayles, and later a up to the time of his death with G. Underhill.

Mr. Greene was a member of Wate town Council, No. 157, Royal Arcanu and of Corona Lodge, No. 705, I. O. F., and also of the original separa company, old Company C, when it w a private organization. He was a ma highly respected by all with whom came into contact in business relation and had a host of friends. He was great lover of home and spent all of h spare time there, rarely being seen the business portion of the city aft his work for the day was done. Besid the many friends who will mourn h demise with the greatest sincerity leaves a widow, two daughters, Mi Florence and Miss Bessie Greene, an one son, Westel Greene.

THIS WEEK'S SUPPLEMENT.

Canna Mont Blanc.

The colored supplement accompanying this week's issue is a representatio of the new canna, Mont Blanc, originated by Antoine Wintzer, of the fir of Dingee & Conard Co., West Grov Pa., by whom the variety is being disseminated. A full description of th canna appeared in our issue of February 14 last, on page 169.

The Pacific Coast Horticultural So ciety will hold a Spring exhibition the Maple Room, Palace Hotel, Sa Francisco, on April 30, May 1-2. J. W Bagge, 1231 Sacramento street, is manager, and Thomas A. Munro, 1701 Oa street, secretary. A premium list ha been issued.

MILWAUKEE, WIS.—Sidney Courteen, seedsman, has been electe president of the Milwaukee Chamber Commerce. He is one of the younges members ever elected to the positio and has been a member of the Chamb since 1892. Mr. Courteen is an activ member of the American Seed Trad Association. He was born in Monmouth, England, and came to thi country in 1883.

CORRESPONDENCE.

The Horticultural Rubber Ball.

Editor Florists' Exchange:

It is not often that a real mechanical floral novelty is seen—some of the Japanese monstrosities are odd and educational, but it has been left for the Yankee florist to japan the Japanese.

I saw in the greenhouses of J. B. Keller's Sons, of Rochester, N. Y., recently, an old Japanese fern ball that had been covered with that well-known little creeper Ficus repens, and lo and behold, the "horticultural rubber ball" has evolved. What a boon to the catalogue man, for Job, and the author of the "Ginger Jar." Truly, our art has entered on a new cycle. Next!

H. A. B.

Job and the Social Habit.

Editor Florists' Exchange:

What is the matter with Job, anyway? What makes him so cranky? Has he got a new boil? Can he get "no rest for the soles of his feet"? I am sorry to see that your editorial comments on, and the fact of your coinciding with, remarks made at the New York Florists' Club have upset his sensibilities to such an extent he is both "astonished" and "amazed" and finds fault with you for "advocating the convivial spirit," which I don't think you did, asserting only that such a spirit does exist among florists—an assertion which I think it will be hard to controvert. And if Webster defines the word right it is a spirit to be encouraged and not repressed.

Those must be queer clubs that Job belongs to where each member goes and buys a drink for himself; and, as I understand it, drinks by himself. That is a mean way to do. No conviviality about that. No member of the New York Florists' Club would be small enough to do it. The florist wants a convivial drink—a drink with a brother florist, or no drink at all.

I, too, belong to other organizations, but do not find in them the same wholesouled, genial, cordial spirit that exists in the florists' club. No one seems to think himself better than another there, whether at the convention, the outing, in the banquet hall or in the clubroom. All are on the level; the hearty hand-shake and "how do you do?" make you feel that you are with friends at once. Nobodv is mean enough to drink by himself there.

This puts me in mind of a remark made by my old friend, Jim Braik, of Buffalo, at the New York S. A. F. convention three years ago, "The florists are the only people on the face of God's earth, anyway," said Jim, and I am inclined to coincide with him.

Let Job join the New York Florists' Club and learn how to take a convivial drink. Lonesome drinking, to say the least, does not look well, and those who indulge in it are apt to be "stigmatized" as habitual drinkers, or worse! We have a brand there which I am sure would give him that which he evidently lacks, viz., nerve enough to sign his own name.

JOHN BIRNIE.

American Peony Society.

As a result of the preliminary meeting of this society, held in Brooklyn, N. Y., during the convention of the American Carnation Society in February last, the following officers have been elected temporarily to serve until the first annual meeting, which will be held in June, in Detroit, Mich., during the session of the American Association of Nurserymen:

President, C. W. Ward, Queens, N. Y.; vice-president, Guy A. Bryant, Princeton, Ill.; scretary, Arthur H. Fewkes, Newton Highlands, Mass.; treasurer, J. H. Humphreys (Wm. Warner Harper Co.), Philadelphia.

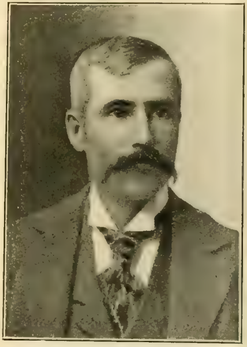
The membership comprises already most of the leading firms of the country interested in the peony. The initiation fee is $5.00 and the annual dues $3.00 per annum. This, it is thought, will provide an income which would seem to be sufficient to carry on the work of the association.

Any suggestions relative to the scope of the society and its work generally will be welcomed by the president.

Reflections on Current Topics.

Mr. Editor: That topic "Graft," was an interesting one to me, and no doubt to many others who are victims of its operation in this land of ours. It has, however, become so ingrained in all lines of business that its elimination, even by stringent legislation would seem impossible. In an English horticultural journal that I see occasionally I observed that the bill you refer to has been read a second time before the Commons and there are great hopes of its passing into law. The tenor of that bill may interest you.

It would enact that if any agent corruptly and without the knowledge of his principal accepted from any person any gift or consideration as an inducement or reward for doing or forbearing to do any act in relation to his principal's business he shall be guilty of a misdemeanor. A similar offence would be committed by any person who corruptly gave or offered to an agent such an inducement or reward, and also by any person who knowingly gave to an agent any receipt, account or document which was false, erroneous or defective. Offenders would be liable on conviction on indictment to imprisonment, with or without hard labor, for a term not exceeding one year, or to a fine not exceeding £500. There was a proviso that a prosecution for an offence under this act should not be instituted without the consent of one of the law officers of the Crown.



THE LATE J. FRANK GREENE.
See Obituary, page 428.

When one reflects on this thing, soberly, what an amount of injustice and harm is seen to arise from it. Deception, fraud, stultification of business, demeaning of manhood; in fact, everything that is degrading. I do not so much blame the recipient of the "graft" as I do those who tempt him. The trade should uproot the evil at once.

* *
*

What's this item of news that emanates from Buffalo? A flower show given by a department store, aided and abetted by the local craftsmen to the extent of appointing a manager and preparing a premium list for same. It is not so stated, but I presume the $1,000 to be given in prizes by the department store will be an equivalent for the stock exhibited, which, of course, becomes the propertv of that store, to be disposed of bv it. If my conjecture is correct, is this a square deal to the retailers of the Bison City, who buy their goods from the men who most likely will compete for that thou'? There are ways and means of interesting the public in matters horticultural, I think, without working harm to any one branch of the business; but that proposed is not one of these. The retailer is blamed for holding aloof from florists' clubs and other institutions of that kind. Would there be any pleasure in associating or co-operating with those who, at every turn, seek to balk the retail merchant in the securing of a legitimate trade, while at the same time soliciting his patronage for their own output? It is a blessing there are places other than Buffalo where chrysanthemums can be bought.

* *
*

I was never more convinced of the value of post-prandial oratory than this year. The "food for thought," or "for the soul," that follows consequent upon the consumption of viands and liquors has never been properly recognized. For an example, a speaker at the recent Rose Society banquet said some incontrovertible and wise things when orating on the horticultural press. It was the best thing for the trade; it not only published all their doings, but was also a great help in keeping some matters from being published; it was the best friend of a satisfactory 'bunch'." There in a few words we have mirrored the caliber of the constituency of, and the press itself. Yet there is a portion of the press that appears to me to lack judgment mightily as to what should be suppressed and what should appear. I refer to the sheets that scatter broadcast the poems of the poet laureate, the stale jokes of W. S., the fomentations of the ginger jar, and the reflections of JOB

CARNATIONS

A Correction.

In the second paragraph of my last article, the sentence "I saw on them no sign of disease and the abundance of flowers on the foliage," etc., should read "the abundance of 'bloom' on the foliage." The word "bloom" I believe to be correctly used.

A Short Trip.

It was my pleasure recently to enjoy a visit to S. J. Reuter's place at Westerly, R. I., and I had an excellent opportunity for seeing his new white carnation Lillian Pond in quantity. Some houses of it show that the demand was heavy for cuttings, and yet there were some benches which had not been robbed for stock, which made a creditable showing. The variety bursts the calyx somewhat, and yet this fault may be overcome by a different method of treatment. The percentage of bursters, Mr. Reuter tells me, has not been large. The flower, when in its prime, is hard to beat for size, form and purity of color. The stem has been criticised several times this Winter in summaries of the exhibitions, but this failing was not noticeable to any extent, and on the best benches where the conditions were favorable, there was plenty of stem.

This variety needs lots of light and air, and from what I have seen of the few plants I am growing it requires a light soil and should be kept on the dry side. It is strongly recommended by the introducer as an early variety and a Summer bloomer.

A white seedling in its first year was very attractive, and will, perhaps, be heard of later.

Prosperity was looking very well indeed, and I have never to my knowledge seen a better bench of it.

Mrs. Thomas W. Lawson, grown inside all Summer, was very interesting and shows that there is room for a great deal of experiment in the direction of pot culture and early planting. The plants were smaller than those grown in the field, and yet the flowers were better, and the short stems in the Fall which come with field culture were avoided. Queen Louise is also well done here.

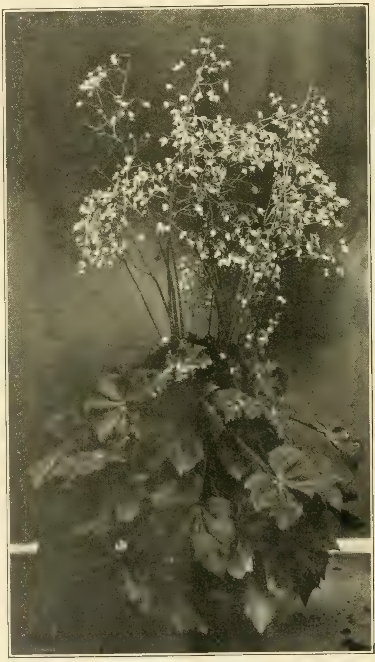
The following day I visited the establishment of J. A. Budlong & Son, at Providence, R. I., and here we see the carnation industry on the increase. They benched 20,000 plants the past year, and will put in 80,000 this Summer, using for carnations the houses formerly utilized for lettuce. Mrs. Lawson, Prosperity, Governor Roosevelt, White Cloud, Lorna, Queen Louise, Estelle and Genevieve Lord were the most prominent. Their young stock was the finest I have ever seen. At present it is in flats, planted at least two and one half inches apart; and the houses which will later be devoted to carnations are filled with this stock.

This concern has an advantage over the ordinary grower in that it has plenty of room for its young stock, and the stock certainly shows that this advantage is being used.

The florist business with this firm is only one department, for hundreds of acres are in cucumber for pickles, and market gardening is the standby of the concern. A large vinegar factory and the immense pickle works are very interesting.

On the afternoon of the same day I visited Peter Fisher's place at Ellis, Mass., and saw the new ones, Enchantress, Nelson Fisher and Mrs. Patten. In every case they showed the effect of the demand for stock; and, in fact, there were no blooms of Nelson Fisher to be seen, although there was an abundance of strong healthy stock. Mrs. Patten did not show the weakness of stem which has been apparent when the variety was exhibited this season; and I still hold to my former opinion that it is the best variegated carnation on the list. Enchantress looked well, but as a result of late propagation the plants were small. Two interesting varieties were Governor Wolcott and Boston Market. Of the two I prefer the former, although it needs more heat than Boston Market to avoid bursting the calyx. The claim that Boston Market is more free than Governor Wolcott I think is more than offset by the superior excellence of bloom in the last-named variety.

A large number of seedlings are being grown, and there were some very interesting ones, but none that I remember well enough to describe. Needless to say, Mr. Fisher may be depended upon to pick out the good ones and it is but justice to state that he has given us several of the best varieties on the list. My time was limited and I was obliged to return home; but I did so feeling that for a short trip it was a very interesting one.



BEGONIA LONGIPILA

Seasonable Notes.

With the longer days and bright sun considerable shading will be necessary, and there is nothing, in my opinion, equal to a shading of cheesecloth which is so arranged that it can be dispensed with in dark weather. Mrs. Lawson suffers from the sun the worst of any variety we are growing, and above these benches we have frames that support the cloth, which is so arranged that it can be rolled back when not needed. In this case, the cloth runs lengthwise of the house. At Budlong's they have the cloth arranged so that it slides on rings, and it can be drawn together when not required; and here the cloth runs crosswise of the house and is close to the glass. Either way will serve the purpose. If frames are built, make them high enough so that plenty of head room is left and they do not interfere with cutting and disbudding.

Shortly after Easter a mulch will be necessary if the quality of the bloom is to be maintained. In my opinion, well-rotted cow manure is best, with a little bone meal added. This mulch should be worked over and gotten into good mechanical condition before application; and the liquid feeding should be continued, as this must not be expected to add all the food. I believe they will stand about all they can get during the next few months. The mulch also serves to prevent evaporation from the soil and should be heavier on the edges, as these dry out first.

At every holiday we have a sermon from somewhere on pickled blooms. I do not believe it to be advisable; and merely wish to say that your reputation is worth too much to be trifled with in this manner. Above all things sell good stock. W. R. PIERSON.

Birthplace of Mrs. Lawson Carnation.

A correspondent writes to the Gardeners' Chronicle of London as follows: "At the meeting of the Royal Horticultural Society at the Drill Hall on January 13, I was told by a titled lady that the carnation Mrs. T. W. Lawson was raised at Dumfries by a gardener there, who tried to sell it in England, but could not get a good price for it and consequently sent it to America, where he did get one."

Strange how Scotland tries to claim every good thing! For the information of our contemporary we would state that a Scotchman (Peter Fisher) did originate the variety, but its birthplace was Ellis, Mass.

BRIEFS FOR BUSY FLORISTS.

ROSES.—With the coming of Spring weather mildew is apt to become very troublesome unless great care be exercised, both as to ventilating and firing. Give all the air possible on bright days, but avoid having a current of air rushing through the houses when a cold wind prevails outdoors.

CARNATIONS.—The land where carnations are to be planted during the coming Summer should be got into condition as soon as the nature of the soil and the weather will allow. Make an effort to plant out as early as possible, so that the young plants may get well established before very warm weather arrives. The plants may be put in frames any time now, and the sash should be removed whenever the weather is at all mild. Pinch back the plants rather than have them spindly, though when the pinching is done take out the lead of the plant only. Nothing is gained by allowing a plant to make a long, spindly growth and then cutting it back down to the soil almost.

CYCAS STEMS.—Considering the first cost, and the simple methods needed to grow along the leaves of this useful plants, it is one of the most profitable subjects that a florist can handle. When the leaves are matured they can always be sold at a good round figure for funeral purposes; or the plants can be disposed of for decorative uses. When the stems arrive put them into pots that will allow of almost two inches of soil all around them; a larger sized pot is unnecessary. The aim should be to have the roots working before the leaves start, and to this end they may be plunged in a mild bottom heat. But if such a place cannot be had conveniently, they can be just as well started under a bench where there are no heating pipes; in fact, they will make better plants if started under such a bench than they will if grown where there is a strong bottom heat, as under the latter condition they are ape to make a set of leaves before any roots form and then they are of very little use, as the leaves soon turn yellow and become unsightly.

Begonia Longipila.

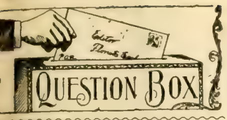
To the one who visits conservatories in the Winter season the thought must arise, what a loss it would be were there no begonias. The lover of plants would sadly miss them. There are those of great beauty grown for the leaf alone; others, for both handsome leaves and flowers, and in the latter class may well be admitted the one we illustrate—Begonia longipila. Not only are the leaves in themselves pretty, but the same can be said of the flowers, which are of a bright rose color. The combination of leaf and flower is very pleasing. The leaves, as our illustration shows, are on long stems, which as a whole forms a beautiful groundwork for the graceful stalk of flowers. Altogether, this is a pleasing begonia to grow, and with ordinary conservatory heat it flowers in late Winter.

Botanists do not treat this as a true species, but as a well marked variety of B. heracleifolia, a Mexican species introduced many years ago. The hairy leaf and flower stalk of both species and variety make them of much interest and add to their attractiveness.

The plant photographed is in the collection of Mr. John T. Morris, Chestnut Hill, Philadelphia. Frank Gould is gardener, and he delights to show the treasures under his care to those who love them. JOSEPH MEEHAN.

Soft Snails in Gardens.

The liberal use of air-slaked lime and unbleached wood ashes at the rate of two tons to the acre will lessen the injury from snails. As a rule, they are the most troublesome where the ground is wet, and thorough underdraining might also be of advantage. If the snails appear after the crops are planted the sprinkling of air-slaked lime or wood ashes over the plants will destroy the snails. The addition of Paris green at the rate of one pound to fifty of ashes or lime, in case it can be used with safety to the plants, will also be beneficial. L. R. TAFT.



Tuberous-Rooted Begonias.

(87) Kindly let me know how to row tuberous-rooted begonias, the est soil to use and if the plants need eding. Is a rex begonia handled in he same way? S. L.

-To grow tuberous-rooted begonias n pots, use 3 or 4-inch sized pots, and rather light but rich soil. Pot the ubers firmly, but not deep; give one vatering, set them on the greenhouse ench and either have the glass over hem shaded or place a sheet of paper light cloth over them. Give no nore water until the leaves begin to how. Pot into larger-size pots when ecessary, using a good rich soil and o other feeding will be needed.

Rex begonias are grown from leaf uttings mostly. Root the leaves in he propagating bed, then grow them long the same as the other begonias.

A Floral Casket Cover.

(88) A. R. P. A floral casket cover made on a wire frame similar to the rames used for any other floral design. The flowers employed in its construction would, of course, regulate he cost. We could not tell what would the lowest cost of such a cover; that vould depend upon the price of the material and labor. These designs cost nywhere from $25 to $250.

Sometimes there is made what is alled a floral pall for draping a casket nd we gather from your question hat a design of this nature is also reerred to. This is formed of a piece f wire cloth, cut to the desired size, vith flowers and smilax or other green vired on. Of course, this cover will ot roll back, and still retain its useulness after it is made. Its cost, like hat of the casket cover, would all depend upon the materials used.

Sow Bugs.

(89) R. Use slug shot along the dges of the benches or wherever the vood-lice congregate. The old and deayed woodwork, if any is about the ouse, should also be taken out and eplaced with new. Old wood makes arboring places for these pests.

Roses for the South.

The University of Tennessee Record Knoxville), Volume VI., No. 1, contains an interesting article on the beavior of varieties of roses in that lodity, from which we make the folowing extracts:

In the Spring of 1901, 500 plants, of varieties, which had been purchased year before and grown in nursery ne year, were planted, and all buds vere removed until September, when ne plants were permitted to bloom reely. They were heavily mulched vith rotted cow manure as soon as et, and they made a vigorous growth, eing watered freely during dry veather.

In the Spring of 1902 a large addiional planting was made, numbering 00 plants, of 47 varieties. For this etting plants from 2½-inch pots were urchased and were at once set in the ose garden. They were disbudded ntil the middle of July, when they vere permitted to produce one crop of lowers, after which they were again isbudded, but were allowed to bloom reely in late September and October.

The planting of 1901 was subjected to very heavy freeze in December of hat year. The roses had been purosely left without protection to deermine their hardiness. Almost all he teas died to the ground, and in the pring all were cut back to mere stubs. he hybrid perpetuals, with the exeption of Gloire Lyonnaise, which illed as badly as the teas, were unjured; but late severe Spring frosts illed their flower buds to such a deree that they made a poor showing. ven such hardy kinds as General acqueminot, Giant of Battles and Paul eyron suffered severely.

The rose seems to demand full sunhine, rich soil, preferably of a clay oundation, thorough drainage and lenty of moisture. All these condiions are met in the University rose garden, and the result is an abundance of flowers, even in the hot midsummer months. The experience of the past Summer shows that protection against leaf spot and mildew must be added to the above requirements of the rose, for the hybrid perpetuals and hybrid teas, but the teas and noisettes and Bengals seem little troubled by these enemies. Very little damage was done this year by insects.

The Summer treatment given the rose garden is as follows: Spring finds the beds heavily mulched with barnyard manure. When the first buds swell this is forked in, care being taken to disturb the roots as little as possible. The plants have been pruned in late Winter, the teas being cut back to the crown, and the others according to strength of growth. All small wood is cut out of the hybrids, leaving only strong one-year-old canes, and these are headed in one-third to one-half. The hybrids as a class tend to over-bear at their Spring flowering, and this can best be prevented by judicious pruning.

Here in the garden large flowers and perfect specimens are desired, in the shrubbery bordering the rose garden, where a tangled mass is wanted, individual flowers are of little importance, and hence little cutting back is practiced. The beds are thoroughly hoed and raked, and the soil kept fine and mellow through the first blooming season. At the approach of hot weather, usually in June, all the rose beds are covered with a mulch three or four inches thick of rotted barnyard manure. Once a week throughout the season the faded blooms are cut off, as the making of seed is a needless sapping of vitality. In this weekly inspection more or less disbudding is commonly practiced. When the new shoots appear, if extra large flowers are wanted, all the buds but the terminal (top one) are pinched out, thus throwing the whole strength of the cane to a single flower. Some varieties, notably Clothilde Soupert and Star of Lyon, blast badly, and it is found that heavy disbudding enables the plant to bring the remaining buds into perfect bloom.

It is seen that even the so-called ever-blooming roses (the teas) have a tendency to produce their flowers in regular crops. In a large rose garden this tendency is recognized by managing the disbudding in such a way that there are always some kinds in good flower, though it is only in the Spring and Fall that the entire garden is at its best.

The watering of the garden is carefully watched. When the soil shows dry beneath the mulch, a heavy watering is given. There are three faucets in the garden, and in very dry times it requires two full days to give one watering. This means that the beds are thoroughly drenched, the water being applied at the roots, not sprayed on. Then water is withheld until the soil is dry again.

Weeds and grass grow up readily in the mulch, so that it seldom happens that a week passes without hoeing. By this regular care a vigorous, thrifty growth and free flowering are insured, and the garden is always ready for visitors.

By September the frequent hoeings will have incorporated the mulch with the surface soil, and a second mulching is necessary. This year only a part of the roses have received this second mulch, and its lack is evident in the difference in bloom. The rose can hardly be manured too heavily, if at the same time water and drainage are properly regulated. It is a gross feeder, and it only succeeds well when abundantly fed.

In Autumn the rose garden is at its best. True, the June roses show few, if any, blooms at this season, but if the plants have been well fed throughout the Summer, and the faded flowers removed promptly, and occasional rests by disbudding provided, the first cool September days will show wonderfully vigorous flowering shoots everywhere, and until killing frost comes the garden is glorious. It is safe to say there are three thousand rose blooms in the University garden to-day (October 24). When the killing frost brings the rest time to the plants and they drop their leaves, a coarse litter will be thrown among the plants, climbers will be laid down, and all will be covered with corn stalks or pine boughs, or anything that will shade them from the Winter's sun and from the thawing that tends to start them into growth too early. Then in March there comes the annual pruning, and the cultivating, and the beginning of another year of beauty.

Here is a list of roses that have been most successful in the University garden arranged by class and color. The first named of each class seems to me the best of its kind and the others are listed in order of merit judged by their action in the garden. No attempt has been made to describe the color tones, as these are variable in different soils and are exceedingly difficult to name with exactness at all times. No hybrid perpetuals are included that do not give some bloom after the regular season of these roses in early Summer. It will be observed the list of hybrid teas is the longest and it is believed that this class will all in all prove the most satisfactory for garden planting.

Hybrid Teas: Mme. C. Testout, pink; Meteor, red; Mme. Abel Chatenay, silvery pink; Souvenir du President Carnot, flesh; American Beauty, rose; Bessie Brown, flesh; Gladys Harkness, pink; La France, light pink; Alex. Bernaix, pink; Balduin, rose pink; Helena Cambier, deep cream; Queen of Edgely, pink; Captain Christy, flesh; Countess of Pembroke, deep pink.

Teas: Grand Duchess Victoria Melita, white; Kaiserin Augusta Victoria, white; White Maman Cochet; Souvenir de Jeanne Chabaud, light pink and salmon; Mme. Reine Gerard, saffron; Cornelia Cook, white; Irene Watts, flesh; Coquette de Lyon, lemon white; Safrano, cream; Perle des Jardins, lemon; Bon Silene, light pink; Souvenir de J. B. Guillot, red; Rainbow, pink; Queen, white.

Hybrid China: Champion of the World, pink; Gruss an Teplitz, red.

Hybrid Polyantha Tea: Clothilde Soupert, flesh and white; Mosella, cream.

Climbing Hybrid Tea: Mrs. Robt. Peary, white; Climbing Meteor, red; Climbing Marie Guillot, white; Wm. H. Richardson, rosy red.

Hybrid perpetual: Mme. Masson, red; Princess of Naples, light pink; Dinsmore, red; Anna de Diesbach, pink; Paul Neyron, rose.

Many other varieties in the garden have decided merit, in some respects surpassing some of those included in the list above; but they have also certain defects that seem to lessen their value. Among the varieties widely advertised that have not succeeded well with us are Liberty, Robert Scott, Bougère, Bridesmaid, Catherine Mermet, Gloire Lyonnaise, Golden Gate, Mme. de Watteville, Maman Cochet.

A LILY FIELD IN BERMUDA.

Value of Judicious Planting for the Suburban Home.

(*Concluded from page 405.*)

Perhaps the first plant to be named in the list of evergreens for suburban home grounds, whether large or small, should be our native hemlock spruce. It is an excellent tree, suitable for a great variety of positions. When allowed full room for development it forms a large tree, but it will endure shearing so well that it is one of the best hedge plants in use, and can be kept of any desired size or shape for many years, thus adapting it to yards of modest proportions.

The Norman and Aphaloman silver firs and the Eastern spruce from Europe are admirable evergreens, forming some of the most symmetrical and beautiful specimens to be found in the best collections; retaining their massive foliage longer than most other conifers and attaining heights of from 40 to 60 feet in as many years. The Douglas, concolor and Colorado blue spruces and some other evergreens introduced within the past 30 or 40 years from the Rocky mountains and the Pacific slopes are valuable acquisitions. Among them are some exquisite blue shades which enter splendidly into color combinations with other foliage.

The Japanese evergreen cypress called retinospora is a family of evergreens with several beautiful varieties of various shades of green, yellow and silvery hues, which are admirably adapted for entering into combination groups or for shearing into formal specimens or set figures of any shape desired. The variety mentioned in nursery catalogues under the name of obtusa nana is one of our best evergreens in almost every way. Junipers and Arbor vitæs are among the cheaper evergreens, mostly of small or medium size, and are often useful for filling in to produce immediate effects, or to obscure temporary defects in designs which will require time to develop their full beauty.

The study of color effects among the foliage of plants is an important feature in ornamental planting, and in no class of material is it more important than among the evergreen conifers.

There are at our command varieties of evergreen and deciduous trees and shrubs which can be combined so as to produce ever-varying results of contrast and harmony in form and hue, changing with the progress of the seasons, ever presenting some new attraction of growth, foliage, flower or fruit. The study of such combinations and the rearranging of beds and grounds from time to time are among the charms to be realized by those who enter upon the work of suburban adornment.

Several features combine to give hardy flowering shrubs an important place in the adornment of suburban homes. They transplant easily, develop rapidly, produce results quickly and pretty certainly, and most of them are so cheap that they can be indulged in freely. Forsythias, cydonias, dogwoods, spiræas, lilacs, snowballs, rhododendrons, hydrangeas, each in turn become a huge bouquet of bloom. Then there are the brilliant foliage plants to keep a show of bright color throughout the Summer. The dainty Japanese maples, with such exquisite shapes and shades in form and foliage; the golden-leaved elder and dwarf mock orange; the purple-leaved plum and barberry, are all conspicuous objects.

By the judicious use of vines, nature's drapery, most pleasing results are produced, even under adverse conditions. With these it is possible to transform unsightly features into objects of beauty.

A blank wall, with its monotonous rows of bricks and mortar, is an ideal home for grape vines or for the Japanese ampelopsis or the hardy evergreen ivy or trumpet vine. A dilapidated building, an unsightly stable, an abandoned quarry, a desolate embankment, or even the public dumping ground may be easily, quickly and cheaply enshrouded with greenness and with bloom by planting near them abundantly of five-finger or Virginia creeper, honeysuckles, or the numerous hardy Rambler roses, thereby changing a forlorn prospect into a scene that the eye will delight to rest upon. Clematis, honeysuckles and akebia seem as if they were intended for adding a finishing touch of grace to the porches of many a suburban home.

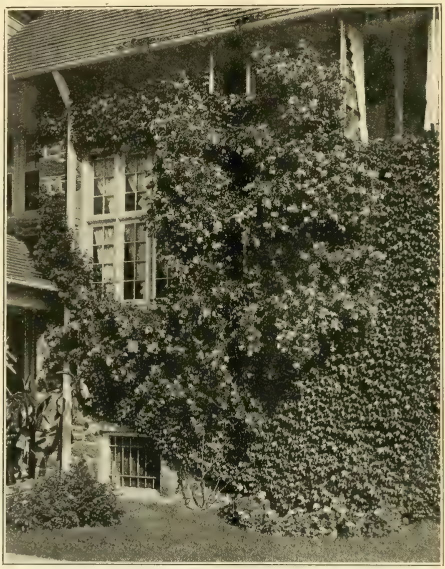
In rural districts, where homes are isolated, each lawn may be treated as a garden complete in itself, but in many suburban neighborhoods the small yards call for more composite treatment, where attention must be given to the general effect of a combination of individual plantings. If one lawn blazes forth in early Spring, with beds of tulips, hyacinths daffodils and pansies in others may follow banks of bloom in masses of early shrubbery. Roses in abundance will be enjoyed by all, and a profusion of herbaceous plants can keep up a successsion of flowers when bulbs, shrubs, and roses are out of bloom. After leaves have fallen and flowers are dead a mass of crimson-berried plants may be the pride of the town. Clumps of evergreens here and there and a windbreak of pines or spruces will at times be looked upon as blessings to the community. Thus, there may grow up in an unpretentious village a notoriety for always having within its borders prominent features of conspicuous beauty. Such a study and treatment of the grounds in a neighborhood of rural homes by a community of intelligent residents must produce results which will afford not only pleasure to the property owners and their families, but will develop a common interest in the improvement and beautifying of the neighborhood. Each one will feel a wholesome pride, not only in his own holdings, but in the beauties of all the trees and shrubs and flowers on all the properties in his street or village, creating a sentiment which must be seen and felt in property values. It is the growth of this desire for civic improvement and the full development of all the possibilities of adornment in a neighborhood that I would encourage.

Roses and Vines—Crimson Rambler Rose.

What a lovely rose the Crimson Rambler is almost every one knows! It is beautiful in a pot, planted in an open place in a garden, or trained to an arbor or a porch. Before us is the representation of one trained to a wall of a house, and enchanting as it looks in the picture, that really fails to represent the beautiful effect it produced when its crimson colored flowers bedecked it.

Everything is in the arrangement and surroundings of vines and climbers. To the surroundings of this rose it owes much of its attractiveness.

The Japanese ivy which mingles with it aids it very much, as does the green mass of ivy on the right. The branch of the rose between the window and the porch is enchanting, and when it has grown a few feet more, encircling the window, what a picture it will make!



ROSES AND VINES ON WALL OF DWELLIRG

The half circular bed of geraniums would have made the whole more effective had it been placed further away from the house.

Sometimes we think what a treat it would be to have the Crimson Rambler rose in bloom all Summer, but would it be valued as much as now were that the case? It is the changes and surprises that make us enjoy our trees, shrubs and flowers. As it is now, we wait until June for the treat our Crimson Ramblers give us.

JOSEPH MEEHAN.

Funny.

The young man who wrote and asked his girl to accept a "bucket" of flowers became a little pale when she said she wooden ware it.

"What are those purple posies down by the brook?" asks Gus. "If you mean," replies Clara, "those glorious masses of empurpled efflorescence that bloom in bosky dells and fringe the wimpling streamlets, they are Campanula rotundiflora." Gus plays billiards for a living and Clara goes to a girls' college.

New York.

News of the Week.

Easter preparations among the tailers commenced earlier this y than has been the case heretofo Flowering plants of all descriptions gan to arrive on Monday morning, a for the time being cut flowers were of the race. We have noticed in p vious years, and again this year, tl as soon as the Easter plants are ceived at the stores, all interest in flowers seems to cease temporarily.

J. H. Small & Sons made a decic hit with a window display at the beg ning of the week. This was constitu of a bed, about five feet in diameter, scarlet geraniums, placed in the cen of the window. Turf was laid, coveri the entire space between the edge of bed and the sides and front. Soil w placed in the bed to the regulat depth, and the geraniums in full blo were planted, the whole creating a ve pleasing effect.

Twenty-eighth street has had m the appearance of a plant market th anything else during this week. Ghorley has three stores going. J. K. Al has a large tent in the rear of his pre ises filled. John Young has his st and an annex filled; as also have Bra shaw & Hartman.

A. J. Guttman, in 29th street, taken an extra store to give him ro to handle his Easter stock. In 3 street, J. McManus, Julius Lang, J. Perkins, and J. Hammond are handling plants, in addition to their flower trade.

The next meeting of the New Y Florists' Club occurs Monday eveni April 13. New quarters have be found in the Grand Opera House bui ing, corner of Twenty-third street a Eighth avenue, and we are assured a pleasant and comfortable meet room—one of the best in the city. Th should be a large attendance. The E ter rush will be over, and every me ber will be anxious to see the clu new rooms. Roses and novelties plants are the subjects to be sho and any exhibits sent to John You secretary, will receive the best of c and be properly staged.

Wm. Elliott & Sons had a very la attendance at their Tuesday's auct sale and good prices rule. The bidd sale and good prices ruled. The bidd and some record prices resulted. T variety Margaret Dickson brought highest price of all, 50c. each. Star ard box trees were also much soug by buyers; as also were hydrange that were in good condition for East

J. R. Johnson, late superintendent the Paterson (N. J.) park system, w recently went into business for hims as a commercial plant grower at Pa saic, N. J., has already got 400 lin feet of greenhouses in operation. Ot er houses are in course of constructi and they will be finished in the ea Summer. Decorative plants and pal will be grown chiefly, and it is a fo gone conclusion that with his push a ability Mr. Johnson will make a su cess of his undertaking.

The department stores of the city a making special efforts to provide East plants and some good displays are se The roof greenhouses at Bloomingda Bros., under the management of W. Burnham, are replete with floweri plants, and a staff of 50 clerks is r quired to handle the crowd of buye This firm is enlarging its store by 1 feet, on the 59th street side, and understand that the ground floor the new premises will be utilized as t cut flower store, the present locati having become too small to accomm date the increasing business in th line.

The annual Spring sale of orchids Sander & Sons, St. Albans, Englan will take place in the auction rooms Cleary & Co., 60 Vesey street, on Fr day, April 17, John P. Cleary, auctio eer. Some choice things are offered, catalogue of which will be distribut soon.

The many friends of Alex. Burn Woodside, L. I., will be glad to kno that Mrs. Burns, who suffered seve injuries by being thrown from a trol car last August, is recovering nicely.

Alfred H. Langjahr, wholesale flo ist, Brooklyn, has been confined to h home for several days with a seve case of tonsilitis. He is out agai however, and will be able to overse his Easter business.

The New Jersey Cut Flower C opened its store at 37 West 28th stre on Thursday.

New Bedford, Mass.

At a meeting of the New Bedford lorists' Club last week, William L. G. own was elected treasurer, in place H. V. Sowle, resigned. J. H. Cleary, L. Munson, and George Borden were pointed a membership committee, d E. Y. Peirce, E. H. Chamberlain d A. B. Hathaway the finance comttee. W. L. G. Brown and J. H. eary were appointed a committee to cure a permanent place of meeting. uring the evening there was a discuson on Easter lilies.

Hartford, Conn.

The finest floral decoration ever seen this city was that at the reception Senator and Mrs. Platt at the State pitol, Friday night. The reception om, back of where the receiving rty stood, was banked with A. Farvense fern, asparagus, palms, chids, American Beauty roses and ster lilies. The four walls were comtely covered with green and flows. The orchestra was screened with paragus, which ran from the platm to the ceiling, dotted with small andescent lamps. In the center of room, suspended from the ceiling, re garlands of Southern smilax inwoven with electric lights. The ole interior of the building was elabtely decorated with bunting. It is timated that 10,000 people shook nds with Mr. and Mrs. Platt dur- the evening. The decorating was ne by J. A. McClunie, of this city.

Azalea Plants.
GIVE US A TRIAL ORDER.

Pittsburg.

News Notes.

J. B. Murdoch & Bro. have sold their property on Smithfield street for $175,000 the biggest price per foot for property ever sold on that street. The firm will likely keep up the retail trade for another year in the same place, and then grow cut flowers exclusively for wholesale

John Bader received a large shipment of laurus trees the past week, which arrived in good shape. Mr. Bader's Easter stock of blooming plants is very large—several thousand azaleas, hydrangeas, fine lilacs and good pot lilies, besides bulbous stock in pots and for cutting.

The great Easter flower show in the Schenley Park conservatories will be ready next Sunday and promises to eclipse anything heretofore seen there. Superintendent Falconer was afraid, a few weeks ago, during the warm spell, that plants would hardly hold; but the change in weather helped matters greatly.

The April meeting of the Florists' Club was postponed for a later date, as Easter week would hardly bring a good attendance. E. C. REINEMAN.

St. Louis.

About Town.

Our visitor this week is Arnold Ringier, representative of W. W. Barnard & Co., Chicago. Mr. Ringier has been in Mexico during his trip West, which he says was a most successful one.

C. C. Sanders, of Sanders' Nursery, reports that nursery stock of all kinds is moving fast, and that he has all he can do to supply the big demand. This, with the Easter trade in plants, will oblige all hands to work overtime all of this week.

Ostertag Bros. had a few decorations for large openings the past two weeks. Henry Ostertag reports a very successful season in this kind of work.

President Dunford of the Florists' Club wants all the members to meet at this end of the big bridge next Thursday at one o'clock, to attend the meeting in Belleville. Mayor Halstedt and the craft there are making great preparations for entertaining the members. A large crowd is expected, and a good time is in store for those who may be present. ST. PATRICK.

Detroit.

Easter Indications.

The few bright days make us venture the hope that the Easter lily market will be easier than anticipated. It is feared that the carnation supply will be short, especially white sorts. Bulbous flowers will be plentiful.

Breitmeyer's Sons are elated at the showing their new rose made at the recent exhibition of The American Rose Society. They have an excellent stand of lilies.

Holznagel will have a fine lot of hybrid roses for Easter this year again. Miesel's hydrangeas are nice. Schroeter's stock generally is in good condition, especially his lilies. Sullivan, too, has a fine block of lilies, but they may be a little late. Flammer has all his stock ready for next week's rush

John Dunn, James Taylor, Frank Beard and Robert Flowerday made a pilgrimage to the extensive Dale Estate at Brampton and Dunlop's, at Toronto, and other places in the surrounding country. They praise our Canadian brothers very much and speak in the highest terms of what they beheld, and of the many courtesies shown them

Fred Miesel is up and around again after a long spell of sickness.

George Leadly has been confined to his home for some time, but is improving now. DILGER.

Buffalo

News Notes.

Business among the store men has been good during the past week, augmented decidedly by a run of funeral work

The general retail shopping district has assumed quite an Easter air, window displays being nicely livened up with the living suggestion of the season. The craft are taking a lively and rather rosy view of the outlook, the one needed essential now being that of favoring weather the last of the week.

The classes of stock and variety show better than any year before, and incidentals, charming when properly employed, as ribbons, chiffons and lacy sash effects, quite new, imported mattings, raffia strands in colors, with also the little stuffed ducks and chicks, make up an ensemble of materials ample for the most demanding. Coupled further with a stock of plants and growing bloom, which in quality seems to quite eclipse anything previously known here, a prosperous outlook seems justified. Unusual window displays are being made, and in the stores wall spaces are being shelf-staged, to be massed with plant stocks.

In plant lines at wholesale, W. F. Kasting occupies a near-by vacant store, ample stocks of good quality coming to his hands for disposal. Besides doing considerable local supplying in a clearing-house way, he is shipping freely. The calls thus far are decidedly ahead of last year. Here are handled some well-grown hydrangeas, but in quantity light; well-grown bulbous stock in pots and pans; more or less palms, azaleas well timed in bloom, and lilies in large numbers, the latter commanding 15c. per bloom.

Some of the retail stores show some especially attractive plants, noticeably some bouganvilleas of good size, well bloomed, evidently brought in from the East; pyramidal azaleas, in form truly charming—though to our ideas for effect the pink sorts far outclass the whites. Some lavender shaded rhododendrons, in their profuse blooming, are a feast of form and color. Some of the azaleas seem more floriferous in fine bloom than common, and some bulbs, pan grown, as double Tournesol, red and yellow, tulips, and the Princess single daffodil, command admiration.

Some local department stores are making showings of small ferns and palms in conjunction with metal jardinieres, apparently offered at bargain prices.

W. S. Murray, of London, England, representing an English house, but in Dutch bulb lines, was a recent visitor. VIDI.

Review of the Market

NEW YORK The weather during the ast five or six days has been unprece nted in its unpropitiousness for the cut ower business at this season of the year. aturday last we had a day of rain and ow with a continual high wind; and Tuesday and Wednesday of this week, avy rains all day. With such condi ons, the cut flower trade can be better agined than described; and there was, obably, never before so many flowers the hands of the dealers for Easter me as there is the present year.

Roses have accumulated in huge quan ties, and while it has been possible to tain a fair price for the special grades Bride and Bridesmaid, other grades ve been held as long as possible, and en cleared out at any figure that could got.

American Beauty are both plentiful and eap—cheaper than they have been be re for many months. Bulbous flowers all descriptions are very plentiful and, cept for one or two special varieties of rcissus and one kind of red tulips, there s been no increase in values over those last week.

The supply of violets has shortened con derably, and a slight advance in prices s resulted. Carnations, also, have been ming in lighter in quantity and will erage much better than they have been ing lately.

Cattleyas are a very scarce article, and does not look as though the supply ll be augmented materially for some ys yet.

Lilies, in cut blooms, have been rushed the city in immense numbers, and very w prices ruled at the beginning of the eek, though by Thursday it became evi nt that a better grade of blooms was edominating, and values became stiffer.

The plant trade is exceptionally good, d if we have bright weather for Satur y there is little doubt but that the cut ower trade will also be good. What the aster prices will be no one can tell. This market can reach extremes quicker an any other market in the country; d though it does not look at present as there can be much advance in prices er those quoted to-day, we shall not be rprised to see a marked advance all ong the line.

CHICAGO.—A great increase is noticed the supply of roses which are not eaned up at the end of the day as well could be wished. The price has opped in proportion to the supply. hat the outcome will be this week is ther hard to predict at this writing, ut it is expected the prices realized will equal to the quotations for Easter, ith all orders for roses satisfactorily lled. American Beauty are arriving in rger quantities, especially the fancy rades, and for the past week have been rd to clear out, while in medium grades ere have not been enough to meet the mand. These and the shorter grades ve been the readiest sellers. In Bride d Bridesmaid some clean-up sales were ported the latter part of last week at low a figure as $2.50 per 100, by the ousand lots; and the forepart of this eek finds no decided change in the situa on. Of Liberty there does not seem to enough, and a good price is realized what fancy blooms are available; 5.00 per 100 being the top price.

The carnation problem is what is worry g the wholesalers at the present time. here is not enough of these flowers com g in to meet the demand, and a enomenal high price is obtained for any ir average flower. The price in force is (Tuesday) morning is from $2.50 to 00 per 100; and if there is no increase the supply before Thursday, some cut ng of shipping orders will occur. Violets ave shortened in supply very consider bly, it being rather hard to fill all orders. he consignments of bulbous stock have t increased since last report; from pres nt indications there will be enough for aster sales. The lily situation has as med a brighter aspect, and from what n be learned there will be a sufficiency lilies to meet all demands.

Of miscellaneous stock there is an ever creasing supply, and while some sorts nd a ready sale, others cannot be dis sed of at any price.

There has been no relief in the green tuation, and prices realized are the me as those previously reported

R. J.

ST. LOUIS.—At this writing we are bout to enter upon a very busy week, nd all of us are speculating as to the ospective Easter business. The general pinion seems to be that the outlook is ery favorable for a big trade in both ut flowers and plants The West End lks who carry a large stock of fine lants, anticipate a big trade in this line; e downtown florists handle mostly cut owers. The weather is very changeable ere. Thursday of last week it was hot; riday we had a snow storm, and Satur ay the weather was again warm and leasant.

Trade in cut flowers keeps up remark bly well, and has done so during the ntire Lenten season. We have had lenty of stock the past week; about the only scarcity was that felt in white carnations, funeral work being plentiful.

The rose market is also better. Bride and Bridesmaid sold well at 5c. to [illegible] Other roses of first class grade are somewhat scarce. Good American Beauty are in limited supply. These sell at from $[illegible] to $6.00 per dozen; of shorts we have plenty at $5.00 to $6.00 per hundred

A fairly good lot of colored carnations are coming in, and as these have a big demand at $4.00 and $5.00 per 100, very few are left over. The best of the colored kinds is Mrs. Lawson. Anything in white sells at sight.

In bulbous stock, Roman hyacinths are scarce. Quite a number of Lilium Harrisii are in, bringing $1.50 per dozen at wholesale, with brisk demand. With plenty of L. Harrisii, callas sell somewhat slow. Von Sion narcissus are a drug.

Violets are becoming small, and pale in color, owing to the warm days. The commission men say that violets will be very scarce for Easter trade.

Southern lilac and narcissus are in the market, and sell well. Asparagus, smilax, and adiantum will be in good supply for this week.

There is at present a good deal of speculation as to the supply of lily plants; but from present indications there will be enough of them to go around. As for other plants, such as spiræas, hydrangeas, tulips, lily of the valley and hyacinths in pots and pans, also rhododendrons, there are plenty of them for everybody. A full account of the Easter trade in St. Louis will be seen in the next issue of The Florists' Exchange. St. P.

PITTSBURG.—Easter coming somewhat late this year, good weather was expected, but, instead, for the last week and up to April 8, it could not have been worse, for plant trade particularly—an unusually severe cold spell lasting several days, with the thermometer low in the twenties and the last few days continuous rains have hurt plant sales considerably. There is a great deal of blooming stock to be had, and it will require some hustling to dispose of it in a few days. Azaleas are plentiful, but hardly in as great demand as heretofore. In bulbous stock pot hyacinths are abundant; tulips are about done. Lilies in pots will be scarce. Palms and ferns are going well.

In cut flowers the prospects for Easter seem all right, excepting in carnations, which are uncertain. It looks as if carnations are being held back, as the last few days they were mighty scarce, and prices will likely be away up. Lilies will be equal to the demand, but many are of poor quality, some of which were sold as low as 8c. the past few days. Lilies will bring from 10c. to 12c. for Easter, some exceptionally good ones bringing 15c., wholesale. In bulbous stock daffodils will be plentiful. Roses are coming in very satisfactorily. Easter prices in general for cut flowers are expected to be high; for plants about the usual figures will prevail. If the weather clears up the last few days of this week, a big trade is expected by all; and most of the florists are preparing for it. E. C. R.

CINCINNATI.—There are good prospects of a fine Easter trade. Carnations, as usual, will be a very scarce article in this market. Roses will be more in evidence, and we hope to have nearly enough to go around; the only dread is that the growers will pickle more stock than is good for all parties concerned. J. A. Peterson has some of the finest hydrangeas and Crimson Rambler roses that I have seen in a long time. Peterson is the one man in these parts that can finish these plants to perfection. George & Allan are more than busy getting their bulbous stock in shape. Lilium Harrisii and lily of the valley are their specialties, and of these they have an abundance.

There is nothing new in the plant line to report.

Owing to Easter, the regular meeting of the Cincinnati Florists' Society has been postponed until the 18th, when we shall expect a large attendance, as business of importance to every florist will be brought up.

Joseph Rolker was a caller during the week; also Walter Butler, of Chillicothe, O. E. G. G.

BUFFALO, N. Y.—A good daily demand has been the order for some days, and at Kasting's good stock has cleaned up readily, at favorable prices. Stock in roses and carnations, generally, is of good quality, but the latter especially do not reach around. The outlook for the last of this week would indicate a decided shortage for the demands. In carnations, for instance, some sources of supply promise scarcely half what was furnished a year ago. The run of good tea roses are listed at 8c. to 15c., with carnations of common classes at $2.50 to $4.00 per 100, fancies varying from 50 to 100 per cent above these figures. Good Harrisii lily blooms will command 15c. each. American Beauty will perhaps average 25c. to 30c. for reliable grades. Violets are likely to be in better quantity than quality. VIDI

INDIANAPOLIS, IND. The past warm days have had their effect on bulbous stock, a large quantity of which has gone to waste. There still remains, nevertheless, bright prospects for a big supply of flowers for Easter. Lilies will be plentiful and are quoted at $3.00 to $4.00 per dozen, retail, and $1.50 per dozen, wholesale. Roses are plentiful and will no doubt continue so at Easter. Retail prices this week are as follows: Bride and Bridesmaid, $1.50, $2.00 and $3.00 per dozen. Sunrise and Perle des Jardins, $1.50 and $2.00 per dozen; Liberty, $3.00 and $4.00 per dozen; La France and Souvenir du President Carnot, $3.00 per dozen; American Beauty, $3.00 to $12.00 per dozen. With violets entirely off the market and carnations scarcer than for several years past, there will certainly be a larger demand for roses and lilies.

Plants of all kinds will be plentiful, although some trouble will be experienced in holding back bulbous plants and azaleas. I. B.

BOSTON.—Business in the cut flower line during the first three days of this week was very quiet, but all are making great preparations for the latter part of the week. The shipments of flowers have not been as heavy either as those of last week, but sufficient stock has arrived to meet all demands, carnations being about the only stock much sought which is not overplentiful. Growers of this flower who brought their supplies in on Wednesday sold out readily at good prices. There is every evidence, however, that carnations will be in good supply for Easter, and from present appearances satisfactory prices should be realized on good stock.

Roses have been selling slowly thus far and first-class stock of Bride and Bridesmaid, and, in fact, special grade, was freely offered on Monday at $8.00 per 100. Better prices have been asked for American Beauty this week, but during the early part they, too, have not sold very briskly. The same may be said of all roses.

The supply of bulbous flowers continues very heavy. Jonquils and daffodils make $1.00 to $1.50 per 100, with Empress and Emperor at $1.50 to $2.00 and Horsfieldii and Golden Spur at $2.00 to $2.50 per 100. Lilies are very plentiful at $8.00, $10.00 and $12.00 per 100.

Violets have not been so numerous, but quite a good supply is looked for the last of the week, though single ones are apt to be a little scarce.

The plant market has been booming all week, and most of the growers express themselves as very well satisfied with the trade. Lilies ranged from $12.50 to $15.00 per 100, flowers and buds. Pans of bulbs made $6.00 to $7.00 per dozen; spiræa, $4.00 to $9.00 per dozen, and Crimson Rambler roses, hybrid roses, acacias, genistas, hydrangeas, azaleas and other seasonable stock were in various sizes and in good supply. • F. J. N.

Philadelphia.

Easter Prospects.

Up to noon on Thursday the condition of Easter business was satisfactory to all. The quality of all plants in bloom is very gratifying to the retailers, as everything has come in in splendid condition. Growers generally have taken notice of the conditions of the past two seasons, and not nearly so many large plants are seen this year. All the medium sizes are selling well. It is difficult to write about any special kind of plants, as all are well done this year. Hydrangeas are not too numerous, and those seen are good. Pennock Bros. have some blue-flowered plants of these from Louis A. Dupuy; they are named Hydrangea azurea, and are nice compact plants in 6-inch pots. The color is of a different shade from any blues seen here, and shows up well under artificial light. Dupuy imported the plants when small from France, from a grower who for some time past has had the monopoly of them in the Paris market. They were grown in soil obtained from an old quarry, and several bags of this soil were also brought over in which to grow them on.

It is doubtful if azaleas were ever offered in better condition than now, and there are also a great many more smaller plants this year to retail at $1.50 and $2.00. There are not so many bulbous plants seen, such as hyacinths and narcissus.

There appears to be any number of lilies, and most of them are well finished and in good salable sizes. Ericas are also in very good shape, and in good assortment.

Crimson Rambler roses are not so numerous this year; those seen are well-flowered and mostly of medium sizes.

The made up baskets of flowering plants are certainly increasing in favor; those retailing at from $6.00 to $10.00 are going fast; in fact, the public is taking any plant that has a fancy pot cover or crepe paper and ribbon, at first sight. A slight embellishment makes a splendid first impression.

As regards cut flowers, there is any quantity of American Beauty roses; at present it looks as if there were too many, as there are also lots of Ulrich Brunner. John Burton and the Hugh Graham Estate are cutting heavy on these latter. All the commission houses report being unable to fill orders complete on carnations, as they cannot get the stock. As usual, it is expected there will be plenty on hand Saturday, when they cannot be sold. They are wanted now to fill out-of-town orders. Several of the local stores handle as few carnations as possible, not being able to rely on them. One shipment to hand this Thursday morning looks four or five days too old. It is hoped no more like this will come in. There are large quantities of cut lilies around, evidently more than usual.

There is quite a demand for violets. Singles are practically done and doubles are small and not satisfactory generally.

Eugene Bernheimer has received three important consignments this week. General Jacqueminot, the first in this season, lavender sweet peas, also the first this season, I believe; third, and most important, a little girl arrived at his home Thursday morning—a happy Easter greeting.

DAVID RUST.

Boston.

News Jottings.

At all the stores, wholesale and retail, great preparations have been going on all week for the Easter traffic, and extra forces have been put on. The retail stores are exceptionally gay with their immense and varied stocks of potted plants.

The Flower Market opened at its new location on Monday.

At Robert Montgomery's Natick establishment I saw one of the finest houses of American Beauty roses it has ever been my pleasure to look at. The house was planted in March, 1902, and flowered all Summer, and in the Fall, when the plants were beginning to go shy of bloom, they were cut down to the stumps and rested all Winter, with the result that when the heat was again applied they threw up a very vigorous growth, and are now a mass of buds. The plants are short and bushy and will average eight to ten flowers to a plant. A new crop is appearing which will give fine long stems, as many of the canes now are three feet in length. This treatment of the American Beauty by Mr. Montgomery has certainly proved successful, more so, in fact, than under the old arrangement, and will be adhered to in the future. F. J. NORTON.

CHICAGO.—On April 4 a fire occurred at 75 and 77 West Monroe street, adjoining the building occupied by the Leonard Seed Company. The latter structure was badly damaged.

TOBACCO POWDER
THE BLACK STUFF FINE—For Sprinkling Only.
WHEN you cannot fumigate with our Fumigating Powder you can apply our Black Stuff Fine direct to the plants; it is strong and equally effective indoors or out for extermination of all plant pests. Your money back if it is unsatisfactory. Trial 5 pound package for nothing if you will pay the express charges on it. Write Dept. B. THE H. A. STOOTHOFF CO., 116, 117, 118 West Street, New York.

Easter and Spring Prospects.

Prospects are rosy for a record-breaking Easter trade. Plants are plentiful and good. The local supply of cut flowers will be totally inadequate and large quantities have been ordered from outside points. Bulbous stock will be fairly plentiful and good. I do not anticipate any oversupply, though. It is too bad some of the store men do not take up the fancy pot cover idea and decorating with ribbons. The cry is heard that a sufficient price cannot be obtained. How can one judge unless he has tried it? I will admit that if prices were demanded in the half-hearted way which obtains at present with some growers we might witness the refreshing spectacle of the plant being sold at cost price with the pot cover thrown in gratis.

Dave McLeod is busy, having a fair lot of Easter stock to attend to and a great deal of Spring stock, which occupies a large range of frames. This young grower's place is one which, from present appearances, is not liable to become hide-bound at the one-man-and-a-helper stage, but seems destined to grow.

John A. Bruce & Co. are rushed with orders in consequence of the early season. I found the affable Tom Lawson at the counter with hardly time to talk.

Walter Holt has been under the weather for a few days with grip. He is pretty well rushed with orders.

Webster Bros. have almost their full force of men and helpers at work. They expect a largely increased trade from the Northwest Territories this Spring.

Horticultural Society.

R. B. Whyte, of Ottawa, lectured before the Society on the 6th inst. The subject was "Bulbs and Bulbous Plants." Spring bulbs, of which he had many samples of flowers with him, came in for a large share of attention. Gladiolus were also specially mentioned, and in this connection H. H. Groff was given due credit for the magnificent improved strains he has produced.

Jas. Garrett and J. Milton Graham attended the meeting as delegates from the Gardeners' and Florists' Club, and were well received.

This Society is flourishing under the management of President McCulloch. Arrangements have been made for a Fall Show in the Armory, and if the present arrangements are carried out it will be the biggest horticultural exhibit seen in the city for many years.

G. & F. Club Meeting.

The regular meeting of the club was held on the 7th inst. President Turner announced that through the kindness of Fred Foster a neat bank account had been unearthed; it had been the property of the old Florists' Club, which went out of existence 11 years ago. Arrangements have been made so that the funds are being transferred to the treasurer of the present club.

C. Webster reported that T. Manton, of Toronto, had agreed to deliver an address before the club after the Spring rush. Arrangements are to be made with Roderick Cameron, of Niagara Falls, to address the next meeting to which the members of the Horticultural Society will be invited.

Montreal.

News Jottings.

We have had several rainy days, but the probs predict fine and warm weather for the balance of the week and for Easter. If this forecast proves correct a great trade will be done in this city; never before have the prospects been better. The florists' stores are stocked from floor to ceiling with great quantities of splendid plants, lilies and spiraeas predominating. Roses and carnations will be scarce, but bulbous flowers very plentiful. No smilax whatever can be had.

Miss Isabella Cairns has her neat store in the Art Gallery block well filled and the arrangement of the flowers is very tasteful. Miss Cairns reports a large number of advance orders over last year, and expects trade to increase 50 per cent.

L. H. Goulet reports a great demand for roses and carnations, with supplies short.

S. S. Bain's two stores are very busy. His greenhouses were open for inspection last Saturday, but as the weather was inclement very few visitors attended.

Club Notes.

Thirty members attended the regular monthly meeting Monday night. Mr. Darcy read a paper on lilacs, which was well received.

The club will hold a euchre (twenty-five tables) after Easter. Handsome prizes will be given the lady and gentleman winning the highest number of points. This will be the last social given by the club this season.

Mr. Gibb, of the City Gardens, will read a paper at the next meeting on "Public and Private Parks as Seen in Boston."

Great interest is being taken in the chrysanthemum show to be held in the Windsor Hall next November. This exhibition promises to be the best yet.

Some of the growers are complaining of the quality of carnation cuttings being sent out. One man who received one hundred Adonis says he will be lucky if twenty-five of them grow. Considering the high price charged, and the chances of the variety being half as good as it is cracked up to be, this is discouraging.

W. C. H.

Sandwich, Ont.

The greenhouses of the Windsor and Sandwich Floral Company were in the line of the hail storm of April 2. Two-thirds of the glass in the greenhouses was broken, and most of the stock damaged. The loss is stated at $1,000. The glass was double thick, 16x24.

TORONTO. Business continues good, and, although stock is very plentiful, it is nearly always cleaned up. There has been offered a large supply of both Harrisii and longiflorum lilies during the last ten days, but the store decorations have cleaned up most of these. Prices have often been very low. Most growers ask from 8c. to 15c per bloom, but last week and this one of the large department stores sold them at retail at 8c per bloom, and they were snapped up. Most of the flowers are full out, and would not keep very well until Saturday. Roses are not over-plentiful, but are generally of good quality, and are likely to sell at good prices for Easter. The same may be said of carnations; they have generally cleaned up well all Winter, and there is no overstock as yet. Prices for Easter are stiff. Violets have been of good quality all Winter, but are scarcer now, and I only know of one grower who has a really good cut for Easter—Wm. Fendley, of Brampton. He has also a fine cut of carnations. W. J. Lawrence has had a very fine lot of lilies; his roses are doing very well; he has a fine stock of young ferns coming on. Miller & Sons, of Bracondale, are sending in some very nice lily plants; and their carnations are quite up to their standard. Jay & Son have two good houses of carnations; some good lilies just right, and a fine stock of bulbous stock. Their foreman, Arthur Charlton, is leaving to go up to the Dale plant, at Brampton. George Mills has been having fine carnations all Winter, the plants are a little off just now, and his Easter cut will not be so heavy as usual. His plants, however, look fine. Glacier has been his best white, and he will plant more of it next year. This variety has done very well all around Toronto this year. Dunlop will have a fine cut of roses, his carnations are not in full crop, but he will have a nice lot of good blooms. The Toronto Floral Company is a little light on roses and carnations, which have been cut very close. This firm has some pretty American Beauty roses in pots just right.

The St. Lawrence market will be filled with stock on Saturday.

W. W. Gammage, of London, was in the city last week. He says business is very good there this season and he expects to build several houses this Summer.

Chicago.

ws of the Week.

The past week has seen some her erratic weather changes. We ve had Summer and Winter conditns in less than twelve hours. This s had a considerable effect on the rket The clear and bright days will d to increase the supply of roses; but do not think there will be any relief ded in the case of carnations, ich are bound to be in short supply d prices higher. At this writing, esday, it is difficult for the wholers to fill their shipping orders for nations. Present indications point the fact that there will be more lilies the market than can be cared for perly.

he wholesalers and retailers are of opinion that the coming Easter de will be better than this city has ore seen.

he new store opened by A. Lange, 47 Monroe street, has been given the me of "The Floralia;" Lee Walz is manager. There are two as fine w windows as could be wished for. enry C. Rowe has leased the store 39 Monroe street, and will use it as nporary quarters during the Easter h.

Raske, of the Board of Trade wer store, reports business good, both his old place and the new one he recently opened in the Grand Pac Hotel.

aughan's Seed Store is busy at the sent time with retail trade.

he Anderson Floral Company is ndling some very fine white antirrum, which is selling, retail, at $1.50 $2.00 per dozen.

IcKellar & Winterson report sales of ster novelties away ahead of last r's.

eorge M. Garland last his paint p by fire early Friday morning, April By the extra exertions of the bucket brigade his other buildings were ed. The destroyed structure was t recently completed.

J. Hauswirth had the decorations the presidential receptions. Those the luncheon were in red and green, ile Spring flowers were used in the nquet decoration.

B. Deamud is again around after a ge of sickness.

M. Gasser, Cleveland, Ohio, was a ent visitor.

ROBERT JOHNSTONE.

Cromwell, Conn.

3v the last of this week A. N. Piern will have shipped about 150,000 lium longiflorum blooms and buds, of ich at least 120,000 have gone in pots. Two good pieces of work are finished he rose grafting and the planting of of the valley. There will be someng over 100,000 of the former, and ile many of the young plants have eady been shipped the larger part ve been held until after the Easter h is over. In regard to the latter, out 2,000,000 pips have been planted s Spring.

he sale of violets in bunches and ts has always been an important ture of the Easter trade. This year, ing to the warm and unseasonable ather of the past three weeks, there none at all. They simply ran out ore their time, and the house has en given up to sweet peas, which already attained a good growth in nch pots.

H.

Hackensack, N. J.

he Red Towers Greenhouses do not m to be feeling the effect of the rently inaugurated competition. Their siness is double that of last year at s time. The nursery department is o booming, necessitating overtime rking.

Bloomfield, N. J.

ohn Rosbach & Son grow a general ck. They have made some happy ikes in annuals lately, which sell dily. An attractive store at Bloomd Centre draws considerable passing tronage.

J. B. D.

Lowell, Mass.

everal of the local florists are canates for the position of superintend of parks and commons, among em Charles Marshall and John Oliver. e commission will make its selection May.

Orange, N. J.

A greater Easter preparation has been made this year than ever before. kin & Collins have kept up a veritable flower show in their windows since Christmas time. At the Bell Street Greenhouses this firm has a fine bench of lilies, free from any disease and robust in growth. The bulbs were planted last August, and have been kept cool and grown with excellent judgment.

Charles Read has a full supply for Easter. Emil Decker is depending largely on a call for cut flowers. His mignonette, from which he has been cutting since December, still furnishes good spikes. The strain is one which it has taken him six years to perfect.

George Atkinson has devoted the "Castlewood" houses to lettuce, but at the houses on the Northfield road his carnations are in fine condition.

At Manda's, in South Orange, a large business has been done for Easter. Mr. Manda reports a shortage of lilies for this section. An increased call has been experienced for orchids, principally cattleyas and lælias. Cœlogyne cristata is also in demand for bridal bouquets. A large consignment of South American orchids has just been received. Jean Greyot, recently sent out by Mr. Manda to collect orchids in Mexico, was stabbed there, and until within a day or two was believed to be at the point of death. A large and valuable collection of conifers has just been set out. All are named and classified. Some fig trees in tubs are being grown. The recent enlargement has admitted of a better display of palms. Mr. Manda is erecting a hexagonal end, nearest the railroad, and anticipates a further addition of a curvilinear-roofed palm house in the east side of his establishment. Dan. MacRorie has returned from a successful trip.

The sheriff visited Fenner, of Mountain Station, on April 7.

J. B. D.

Montclair, N. J.

J. C. Williams reports trade in nursery stock brisk.

A. D. Rose is adding a carnation house to his plant. He scored a triumph in the decoration for the marriage of Joseph Jefferson's granddaughter at this place. His lilies are in excellent shape for Easter.

A. S. Wallace is a very successful grower of bulbous stock here. Paul Wilcox grows for the wholesale trade. Mr. Reed has taken the place of Oscar Carleson as head gardener.

Los Angeles, Cal.

The Grace Hill Nursery has acquired thirty-seven acres of land here, to be devoted to carnation growing. Joseph W. Wolfskill is the proprietor, and the head gardener is George W. Watson. Mr. Wolfskill was one of the first to engage in the enterprise at Redondo, and Mr. Watson spent thirteen years there in charge of this work.

The new carnation farm already begins to show the extensive plans made for the enterprise. Three greenhouses have been completed and are occupied. They are each 200 feet long and 15 feet wide. Just to the south of these six similar greenhouses are to be constructed.

A complete steam-heating plant is installed.

During the last week about five acres have been prepared for the young carnation plants, and most of these were set before the recent heavy rains, giving them a great advantage. This tract is irrigated by a system of 4,000 feet of 1-inch and 1,700 feet of 2-inch pipe, supplied from the city waterworks

It has been determined that an abundant water supply can be procured on the land, and in the near future two wells will be sunk.

The investment in the new enterprise at present represents an outlay of about $10,000, and this is but the beginning of the industry.

San Francisco.

The State Floral Society met recently, when the following nominations for officers for the approaching term were made: For president, Professor Emory E. Smith; first vice-president, Mrs. L. O. Hodgkins; second vice-president, Dr. Harry L. Tevis; recording secretary, Mrs. H. P. Tricou; corresponding secretary, Mrs. W. H. Wiester and Miss Georgia Barker; treasurers, Mrs. M. Grothwell and J. Thompson; accountant, Mrs. A. R. Gunnison. The society has decided to join the Horticultural Society of England.

FOLEY
CAST IRON
GUTTER

This cut is not full size. We make two sizes
2⅞x5 inches and 2⅞x6½ inches, inside measurement of waterway.

No rotting at the ends of bars. The end wood is not punctured. Bars always have perfect bearing, and the drip falls free into drip conductor.

Your bars will last five years longer than on old style gutters. The lugs through which the screw fastens the bar are cast on the gutter.

WATER LILIES

Hardy and Tender
NELUMBIUMS, VICTORIAS, Etc.

We are Headquarters for Water Lilies and Aquatic Plants of all kinds.

Intending planters will gain a long start and early blooms by procuring dormant tubers of the tender Nymphæas now, and starting same indoors, thus securing strong plants for planting at proper season, and also save the expense of heavy express charges. We shall be pleased to furnish estimates and offer practical suggestions to those intending planting either large or small ponds.

SEED TRADE REPORT

AMERICAN SEED TRADE ASSOCIATION

Walter P. Stokes, Philadelphia, President; C. N. Page, Des Moines, Iowa, Vice-President; C. S. Burge, Toledo, Ohio, Second Vice-President; S. F. Willard, Wethersfield, Conn., Secretary and Treasurer; A. N. Clark, Milford, Conn., Assistant Secretary.

Western Sugar Corn Seed.

Editor Florists' Exchange:

Noting the remarks in your paper by Frank T. Emerson, Waterloo, Neb., regarding sugar corn seed, we wish to give some of our Eastern seedsmen a little sample of our experience with their famous "Eastern grown sweet corn."

A few seasons ago we endeavored to obtain some very fine "Eastern stock" of Stowell's Evergreen sweet corn for seed purposes, and wrote one of these gentlemen who handled only "Eastern grown" corn. The sample came and was satisfactory, and we ordered five or six bags to be sent to our grower for seed, as we were sure we were getting Eastern grown seed, and something that would excel anything that could be grown in the West. Imagine our surprise when changing the bags to find, out of the six bags, two labels which read: "Two Bushels Stowell's Evergreen Sweet Corn, from Chauncey P. Coy & Son, Waterloo, Neb."

Since then we have not had the exalted opinion of the famous Eastern grown seed corn that we formerly had. And this party no doubt would be just as ready as some others to say that the Western grown seed corn was only fit for pig feed.

We Western seedsmen are not on to a good many things that our Eastern brethren are familiar with, but, after we pay the freight, we become like the Dutchman that learned "somedings."

W. W. HARNDEN.

Kansas City, Mo.

European Notes.

We are still waiting for that burst of fine, dry weather which it is hoped will put some fresh life into the trade, especially in agricultural seeds, which, on account of the impossibility of working the land with the quantity of rain that is falling, move very slowly.

Careful examination of crops in the seed-growing districts of England reveals that all varieties of cabbages, turnips, Swedes, etc., will be irregular as to earliness in blooming, very many fields having already part of their number blossoming, while the remainder are either a week later, or even not yet giving signs of flowering at all.

Cabbages, both early and late, are particularly irregular. A good deal of this is due to the fact that many growers were unable to get their plants set out early enough in the Autumn, having been retarded by the unusually late harvest last year. Those planted earlier have, on the whole, run well; but those planted later, both early and late varieties, do not as yet give very satisfactory promise, only a few here and there having run up to the present time.

Turnips and Swedes have stood generally very well and are making bold efforts to break into bloom. In one district, however, a white maggot has made a serious attack on the roots, bred doubtless by the prevailing humidity of the weather, and has in some cases so seriously damaged the crop that the farmers have had to plough them up. It is thought that a week or so of fine, dry weather will be the only possible remedy for this disease.

Onion crops give excellent promise, having been set out during a spell of propitious weather, and should be able to hold their own against all contingencies.

The beet crops in France are planting rather badly, a rather large quantity rotting away. There was, however, a plentiful supply of plants, and at present only a small loss need be feared.

Pomology.

Under the classification of pomology (appliances, methods, and products) there will be installed in the Horticulture Palace of the Universal Exposition of St. Louis, 1904, displays as follows:

Pomaceous and stone fruits: Apples, pears, quinces; cherries, plums, peaches, apricots, nectarines, etc.

Citrus fruits: Oranges, lemons, limes, shaddocks, pomelos, etc.

Tropical and sub-tropical fruits: Pineapples, bananas, guaves, mangos, tamarinds, figs, olives, sapodillas, etc.

Small fruits: Strawberries, raspberries, blackberries, dewberries, gooseberries, currants, etc.

Nuts: Almonds, chestnuts, filberts, hickory nuts, walnuts, etc.

Casts and models of fruits in wax, plaster, etc.

Appliances and Methods of Pomology.

Tools for nurserymen: Spades, picks, hoes. Tools for pruning, grafting, gathering, packing, and transporting products; pruning and grafting knives, ladders, watering apparatus.

Arboriculture.

Fruit trees and methods of propagating, planting, growing, training, pruning, etc.

There will be no charge for space occupied by exhibits, and a limited amount of power for the operation of mechanical devices to illustrate processes of special interest will be furnished to exhibitors without cost.

For the annual meeting of the American Association of Nurserymen, to be held in Detroit, Mich., June 10-12, a railroad rate of fare and one-third, on the certificate plan, has been authorized.

Timely Reminders.

This is the time to prune back closely Hydrangea paniculata grandiflora. The closer it is cut the stronger the shoots and heads of flowers.

Wherever the mercury does not indicate more cold than an occasional drop to zero, the Aucuba japonica will thrive if in the shade. The male and female flowers are on separate plants. To have the female ones bear berries the plants must be fertilized by the male ones. When a plant is well berried it finds ready sale by florists in the holiday season.

Buddleia globosa, seen and admired by so many in the south of England, will not stand our climate, but is an excellent tub plant. Several other buddleias are hardy.

It is noticed that seeds are being offered of Berberis Fremonti by some seedsmen. This is a grand new one, having foliage almost blue. It comes from Arizona, Utah and neighboring States.

So many English hollies are being imported for Christmas uses that many of them are finding their way to lawns for a permanency. This is all right for Philadelphia, as this holly is hardy there, but it might not do further north unless in well-protected places.

One of the handsomest of early flowering herbaceous plants is Saxifraga crassifolia. The large, fleshy leaves are evergreen, and as soon as Winter is over its heads of pink flowers appear and make an attractive display. It is a very good thing.

Magnolia Lennei seems much overlooked, considering its merits. Its large, cup-shaped, rose-colored flowers are quite distinct from those of any other sort. It is a robust grower, and one of the hardiest of the Chinese section of this genus. And it blooms a little later than M. Soulangeana, which almost insures the flowers from late frosts.

An Extraordinary Freeze.

On Sunday morning, April 5, the thermometers in this vicinity recorded 7 degrees of frost, the reading being 25 degrees. A most puzzling matter to many is the small damage done. Many magnolias, especially M. conspicua, were fully expanded, and such flowers were killed. But buds not fully perfected were not. Pear, cherry, numerous trees and shrubs were almost in leaf, yet were not hurt. Peaches in flower were not injured. Weeping willows had been in leaf for two weeks previous, yet were unharmed. To me, the strangest sight of all is to notice that bushes of forsythias in full expansion of flower on the night of the freezing are entirely uninjured. Of the many shrubs observed, Deutzia gracilis is the only one hurt, and it is not badly damaged. It froze again two degrees on Sunday night. On many occasions I have seen forsythia flowers ruined with but a degree or two of frost.

A Good Hardy Fern for Grouping.

One of the best of hardy ferns for forming a group is the ostrich fern, Struthiopteris germanica of the older school, and Onoclea germanica of the newer. It is one of the large growing ferns, and the fronds are arranged that they form a "bird's nest" appearance. Then the bearing of the two kinds of fronds, the sterile and the fertile, adds to its interest.

Why it is a good plant for grouping is because of its habit of increasing by underground stolons. A vigorous plant set out this year would give a half dozen in a year or two. New plants crop up at a distance of a foot or more from the parent. Then the new ones become parents in turn, and very soon there is a large clump of this fern where the one was set in the first place. Naturally, they are found wild in a low situation; but in cultivation they do not stand on demanding a similar place. It is just the fern where a "wild clump" is desired.

Purple-Leaved Sycamore Maple.

On many of the older estates in the country, the English sycamore maple is often met, making a grand shade tree. The purple-leaved variety is a desirable sort, and in growth follows the typical form closely. As with some other purple-leaved trees, the purple color is chiefly observed on the under side of the foliage. About the time the foliage is fairly developed in Spring is when the purple color is most pronounced. On large trees, where the underside of leaves can be viewed, this maple is much appreciated.

It may be said of both this and the green-leaved sorts that it could be safely recommended to customers to plant them. I have before mentioned that the bunches of seed hanging in trees all Winter is thought objectionable, but trees do not seed until of good size and then, the branches being well above ground, are somewhat out of sight. Personally, I think the objection a very slight one.

Cutting Down Shrubs for Layering.

To the nurseryman, layering is of much importance in the increasing of his stock. There are many shrubs and trees that root readily from layers, and others which appear to defy almost all other methods of propagation. Such shrubs as magnolias are raised from layers to better advantage than by any other method. This is a good time to prepare stock which it is intended to layer. As all branches are much easier layered when starting from near the ground, it is a good way to cut them down pretty close to the ground at the present time, to encourage a growth of young branches from that point. The gain is both in the securing of young shoots and having them close to the ground. Cut down now, before growth has started, there should be a strong showing of long, vigorous shoots for layering.

It is the practice in many establishments to cut down such shrubs in the Winter season, when the excised branches are utilized for cuttings, but the top would be of no use for that purpose this late in the season.

Layering should commence as soon as the shoots of this season are of length sufficient to permit of it. The earlier the work is done, the better rooted will the layers be by Autumn.

Planting Cuttings and Layers.

The layers of shrubs rooted last season, whether still on the original bushes or in heeled-in positions after having been cut off last Fall, as well as cuttings of shrubs made during the Winter, should be got into the ground at the very earliest opportunity. Early planting takes high rank as a promoter of success. Growth is then pretty well assured, and at the end of the season many of the cuttings, or layers, will be plants large enough to sell.

The cutting down or not of layers when planted depends for decision on what the plants are. As a rule, a cutting back is the best thing to do, assuring a bushy growth; but the Japanese snowball comes to mind as being better left as it is, without cutting it back.

When setting out the cuttings and layers, place them pretty close together in the rows, looking forward to transplanting them next Spring, after which there should be nice plants for selling. Some of the quick growing kinds make plants of a salable size the first year, and such sorts may be set further apart than the others, to aid their development.

Balls of Earth With Evergreens.

The practice of lifting balls of earth with evergreens is better appreciated every day. Time was when such a thing was almost unheard of. In the hurry of a nurseryman's shipping period it was deemed of too little importance to be practiced. In fact, to my own knowledge, a nurseryman doing an extensive business said that the ball of earth was entirely unnecessary, simply adding to the labor and cost of transplanting, with no compensating feature attached to it. Shaking off the soil made the handling of the tree more expeditious, was his idea, and he thought, with proper ramming of the soil, the tree was in just as good a position as it would have been had a ball been taken with it. A view like this is a strange one when it is an every-day experience of gardeners that a plant from a pot, with soil intact, will transplant with far more safety than another with no soil to it. Besides this, there is the transplanting of trees going on every Spring and Fall, giving to every observant person an opportunity to judge which is the better system. The tree with a ball of earth never fails; the one without it often does.

There is a class of evergreens which make but few roots and so carry a ball with difficulty. Pines are examples. With frequent pruning of the roots, such as transplantings result in, there are roots enough at length to carry some soil, but never with the ease retinosporas, Arbor vitæs and the many forms of cypress do.

Foreign nurserymen are much more alert to the importance of a ball of earth than are our own. Observe the stock often imported from abroad, and whether from England, France, Germany, Holland, or elsewhere, there will be found each one tied up in a bale, the roots carrying a ball of earth Fortunately, as ocean freight is by bulk and not by weight, the ball of soil adds but little to transportation charges.

Our own nurserymen would find a source of profit in following the example of saving a ball. Consider the loss of trade and discontent of customers following the dying of purchased stock. Put this against the trifling expense of bagging the roots, the living tree, the pleased customer, and the balance is greatly in favor of the ball of soil.

It is a pleasure to add that the practice of balling the root is growing with us, as an observation of stock arriving from various nurseries makes evident.

THE Water Garden
BY William Tricker
A Standard Work Written by Request of the Publishers of the Florists' Exchange

THE cultivation of the Lotus or Water Lily, and other aquatic plants, is easily the most fascinating of all pursuits, and this is the only book ever published on the subject. The writer is the standard authority for America. Every detail is covered, all water plants described, and no other guide is needed.

The text describes all operations from the growing of plants in tubs to the large water garden, excavation of grounds, construction of ponds, adapting natural streams, planting, hybridizing, seed saving, propagation, the aquatic house, wintering, correct designing and planting of banks and margins, and all other necessary details. The work contains nine beautiful plates, eighteen full page descriptive views of leading water gardens and ponds, and numerous smaller pictures prepared with special reference to this book. Printed on heavy enameled paper. Elegantly bound. Large octavo, cloth. Price, $2.00, by mail, postpaid.

NEW WHITE CANNA MONT BLANC

The Greatest Novelty in Cannas

MONT BLANC will become one of the most popular Cannas for bedding purposes; it contrasts so beautifully with the crimson varieties, and grows so even in beds. It has ample bright green foliage; the flowers have fine form, the spikes are large, entirely erect and are borne just the right distance above the foliage.

Potted Plants, 75c. each;

$7.50 per Dozen; $50.00 per 100.

GREAT REDUCTION

On the best list of Cannas ever offered; **50 Varieties**, all different shades; **strong healthy roots. Our Cannas never kept so well. Prices** have been lowered **25 per cent.** to reduce surplus. **This offer good for a short time only. No order accepted** for less than 100 roots, or 10 of a kind, at these prices.

New York.

The Week's News.

The steamer Trinidad, on its arrival from Bermuda, on Friday, April 10, was reported to have 1,031 boxes of Easter lily flowers on board, each box containing five dozen buds.

The Oaks, an old mansion on the estate of John H. Taylor, Bayside, L. I., was destroyed by fire on Monday night. The burned building was one of the landmarks of Bay Side. It was erected during the war of 1812, and for the last 25 years had been occupied by a family named Clark. The damage is estimated at $10,000, partly covered by insurance.

Mackintosh, the Broadway florist, will on the 1st of May move to No. 1144 Broadway—a few doors below his present location.

Young & Nugent had a tent in the rear of their store to accommodate their plant trade. Someone from an upper window in the building threw out a lighted match and the result was a fire. This happened on Good Friday afternoon. It took but a few moments to fill 28th street with fire engines, hook and ladder trucks and other fire-fighting paraphernalia. The firemen got the blaze under subjection in short order. The tent was ruined and some of the plants were damaged—but it might have been much worse.

The plant growers who attend the Clinton Market have found a means of protecting themselves from the weather by purchasing a large tent. This tent is to be erected immediately and, as it will cover the space within the market proper, a substantial shelter will be afforded.

The officers of the Market Florists' Association, after repeated conferences with the alderman of the district in which Clinton Market is located, and with various interested politicians, feel very sanguine about a new market, and believe that by the time the season of 1904 opens a suitable market structure will have been erected. John Birnie is devoting a good deal of his time and energy toward securing the new market, and whatever is accomplished in the end will be, in a great measure, due to his personal efforts.

D. M. Ferry & Co. have protested against the appraisement of the Collector of Customs at Detroit, on certain seeds imported from Germany. The case will come before the Board of General Appraisers here for adjustment on an early day.

Boston.

The Week's News.

The Easter trade at the retail stores is reported as having been very satisfactory. Plant sales are said to have been enormous, though here and there considerable stock was left over, much of it of the large expensive kind, such as specimen azaleas, acacias, hydrangeas, Crimson Rambler roses, etc. Of course, lilies were the best sellers; azaleas and the medium-sized Crimson Rambler roses also proved very popular, being in demand next to lilies. Bulbous stock in pans did not sell as well as usual, nor did hydrangeas; and heaths went slowly. Spiræas, genistas, Primula obconica, cyclamen and hybrid roses, cinerarias, calceolarias and such plants, which were medium-sized, cleaned up pretty well.

The auction sales at N. F. McCarthy's rooms opened Friday with a sale of hardy roses and evergreens, including much imported stock.

Stephen J. Quinn, of Brookline, has the sympathy of his many friends in the trade in the loss of his wife, who died Friday and was buried Monday.

M. A. Patten brought into the market last week a flower from a Mrs. Lawson plant which showed exactly one-half pure white, with the remainder of the true Lawson shade.

Many protests have been registered by retailers and growers against the indiscreet and decidedly unfair action of several growers and salesmen, who all Saturday afternoon and evening sold their goods at retail at the flower market. Without a doubt such action hurt the neighboring stores, and no doubt will work injury to other growers who were in no wise connected with Saturday's transactions. There is talk among the buyers for the different stores of boycotting those growers who resorted to these unfair tactics, and other growers realize that such action has a tendency to make the retailer buy his goods elsewhere, and fear that with concerted action on the part of the retailers a very costly lesson might be taught. F. J. NORTON.

HAERENS BROS., SOMERGEM, BELGIUM

HYDRANGEA HORTENSIA MARIESI

A NEW FLORIST'S HYDRANGEA.

This charmingly distinct, highly decorative and attractive new Hydrangea was sent out in 1900 by James Veitch & Sons, London, England, who described it "As having remarkable, very large, sterile flowers three inches in diameter; color, a light pink, shaded mauve, and the finest of Hydrangea Hortensia."

Awarded a gold medal at Temple Show, London, 1899.

Fine stocky, well established plants, 6 to 8 inches high, $2.50 per 10; $20.00 per 100.

J. T. LOVETT, LITTLE SILVER, N. J.

Mention the Florists' Exchange when writing.

RYSANTHEMUMS

anthemums in Cold Frames.

Wm. Scott before the Tarrytown Horticultural Society.

time after the middle of March nthemums can be handled satis- y in a cold frame; and if pro- at that time should be plants at four inches high and well rooted all pots. As they will likely have out of warmer quarters than a ame, it would be well to allow o remain for a few days in the which they are received until come somewhat acclimated, be- tempting to shift them; but after a week they can safely be trans- to four-inch pots.

r they have got a hold on the oil and made a little growth, the should be pinched out to induce ing. Air must be admitted to me every day and regulated so temperature will not rise much 65 degrees; but in the afternoon mes should be closed when the ature begins to fall below this, to retain all the sun heat possi- To help keep up the night tem- some sort of covering should vided for the frames.

hard and fast rule can be laid in regard to watering, but the should be looked over once a or even twice in very bright r, and water afforded when the ows signs of dryness; but great must be taken that the plants are rwatered, as more plants are apt me sickly through too much wa- an by too little.

n the four-inch pots are well with roots the plants should be i into sixes and later into eight- pots, and finally into twelves, stage they will reach early in

aking our compost heap in the e use four loads of sod to one ll-rotted barnyard manure. Af- anding all Winter this is ready to potting in the Spring. Before it is well chopped up so as to thorough mixing. For the first s we use a little leaf mould and as to render the compost some- lighter; but for subsequent pot- we use it without these additions. r the final potting we add a good ling of bone meal; and if the soil a heavy nature, some finely- n charcoal. In the last potting gh drainage must be provided, ng plenty of crocks in the bottom e pots, and the soil should be d moderately firm. Pinching l begin, as before stated, when ants are in four-inch pots, and be ued according as the shoots at- length of about three inches. Sev- hoots will be produced from each , and the stronger ones should nched out a day or two ahead of eaker ones so as to give the latter nce of strengthening. After the f July pinching should be discon- l, and the plants allowed to make e growth they can before setting flower buds.

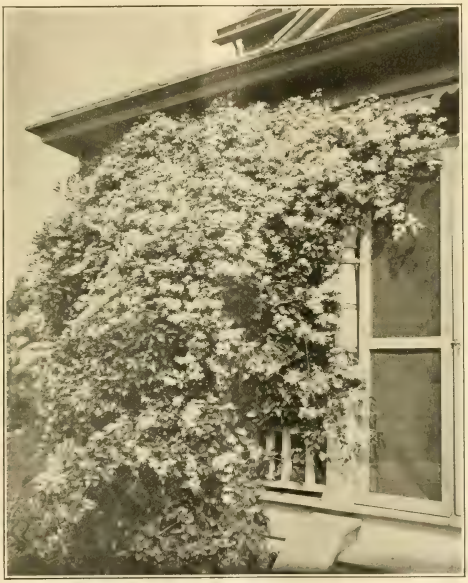
he end of August, and beginning ptember, selecting of the flower will have to be attended to. The date will depend on the variety, setting earlier than others; but, eneral rule, with plants that have kept pinched up to the end of July safe to take the first bud that . By taking the bud is meant the ing of the central bud by re- g all buds and shoots that appear d it.

growth advances, sufficient space be allowed for development, and shes heightened according as the s require it, plenty of air being night and day after all danger st is over.

oughout the growing season suf- t stakes should be placed to the s to insure support and to bring lants into shape; but the final g should not be done until the begin to show color. Several methods of staking are adopted, some growers supporting every flower by an individual stake, while others make a regular wire frame over the surface of which the blooms are evenly distributed. This latter plan makes the neatest looking plant, as it is easier to get the shoots well down over the pot and to give the plant a more symmetrical form.

The varieties I would recommend for bush plants are: Glory of the Pacific, pink and its white sport Polly Rose, are two good early dwarf varieties; A. J. Balfour, pink; Mrs. Henry Robinson, white; October Sunshine and Robert Halliday, yellow, and George W. Childs, red.

In growing plants for specimen blooms under cold-frame culture, I consider the best time to strike the cuttings from the first to the tenth of May. With greenhouses at my disposal I always prefer to strike my late cuttings in cold frames, as I find that better results are obtained.



CLEMATIS PANICULATA

A plot about three inches deep should be procured and filled with clean, sharp sand. Into this the cuttings should be placed, about two inches apart, the sand being moderately damp, so it can be well firmed around the cutting. Keep well watered and have the frame in which they are placed rather heavily shaded for the first few days until the cuttings begin to callous, after which more light can be allowed; but the shading should not be entirely removed until root action has taken place. The closer the frame can be kept the better while the cuttings are striking, as air has always a flagging influence; but as the shading is lightened more or less air must be given to keep the temperature from rising too high. When well rooted, pot up into three-inch pots, and when these are well filled with roots, shift into sixes, which will be found large enough in which to flower the plants. Keep them growing to a single stem by removing all side shoots as they appear. Should buds appear previous to the end of August, they should be pinched out. Several shoots will result from this pinching, and the strongest one should be taken for a single stem, as before, all others being removed.

The selecting of the buds largely depends on the variety. The plants produce what are known as first crowns, second crowns and terminals. A crown bud is a bud surrounded by shoots. These shoots, if the bud is removed, will make more or less growth according to the variety before a bud is again produced; while a terminal bud is one surrounded by buds, designated terminal as it terminates the growth of the plant for the season.

Few varieties do well on the first crown. A notable exception is H. J. Jones, which must be taken on the first crown to give satisfactory results. I have also had some good flowers on the Mme. Carnot varieties from first-crown buds, but, as a rule, the flower comes too dense to open properly, and with a long, bare neck. The second-crown bud is the one on which the majority of varieties produce the best flowers. This, as a rule, is produced about the beginning of September, though some of the early varieties will produce terminals about that time. Some varieties, again, such as Colonel D. Appleton and Goldmine, give the best results on the terminal bud. But the list of varieties is such a long one that it would take far too much time to enumerate them or describe the bud most suitable to each. Suffice it to say that the denser the flower is inclined to be the later the bud must be taken; and as new varieties are being constantly produced, the grower can only learn by experience and a close study of his varieties what buds he ought to select.

Opinions differ greatly regarding the time when feeding should be commenced, but my experience is that if the plant has had a suitable soil feeding is not necessary until after the buds have been taken, and if done much before then is apt to produce soft, pithy growth. I invariably use liquid manure, produced by soaking sheep manure, and take good care that it is not given stronger than the plants can take it up. Twice a week I find often enough to apply it. I use sulphate of ammonia at the rate of one-quarter of an ounce to one gallon of water, applying it about six times in all, but discontinuing it when the buds begin to show color. Some varieties can be given more than others; those that are inclined to damp should be given all the less.

It should be borne in mind that sulphate of ammonia is more of a stimulant than a feeder, hence it should be changed off with other liquid manure, and not afforded too often without intermission.

Clematis Paniculata.

It is no wonder the Clematis paniculata is so popular, for there is no other vine known before it or since that could fill the place it does. Before the introduction our reliance was on the C. flammula if we looked for sweet odor, and on C. virginiana or C. vitalba if we wished for quick growth and starry white flowers without fragrance. In C. paniculata we have quick growth, perfume and flowers in profusion, the merits of all others combined in one. How well the plant is suited for a porch or similar structure the picture shows.

There is a good deal to be gained in having a porch of proper color, that the contrast of vine and flower with it may be pleasing. In the case of a white painted porch the white sprays of flowers are lost sight of if they wander from their green background of foliage. Fortunately, this clematis makes such a mass of verdant leaves that no matter what the color of the porch the white blossoms have ample background.

This clematis is easily raised from seeds and, as it seeds freely, there is no difficulty in getting plants of it. Sow the seeds in boxes in the greenhouse in the Fall. The seedlings will appear in Spring and these plants potted and grown on, or even planted in the open ground, will be strong enough to give some flowers the year following. JOSEPH MEEHAN.

BRIEFS FOR BUSY FLORISTS.

AZALEAS that are to be kept over until another year should receive some attention as soon as the flowers begin to fade. If the plants are of last Fall's importation, they are probably in very small pots, according to their size, and should now be repotted. Use a light, fibrous loam, with a good proportion of either leaf mould or peat intermixed. Do not give the plants very large shifts —1 or 2-inch larger pot is all that is necessary. Pot as firm as possible, using a rammer to pack the soil firmly all around the ball. If the plants are at all unshapely cut them in where needed and remove all flowers before the seed pods form. After potting, water thoroughly to settle the soil, after which care must be taken not to over-water, as but little will be required until growth starts. A light syringing, however, should be given daily.

ROSES.—With the coming of milder weather and corresponding longer hours of sunshine, the rose houses have to be ventilated much more freely. If due care be not taken in this respect a dose of mildew is easily acquired about this time of the year. To prevent mildew there is no better plan than to have the foliage strong and leathery by giving plenty of air on all possible occasions, avoiding high temperatures and afternoon syringings. Young stock for the coming season's planting should be in the pots now; and if the plants cannot be kept near the glass in a moderately cool house they would be better placed in a frame outdoors, providing regular daily attention can be given as regards watering, etc.

CYTISUS AND ACACIAS can be put at the end of a cool house after through flowering, where they may remain several weeks without further injury. Young stock should be potted along, using a coarse, well-enriched soil. Cut any straggling shoots back into shape and water very sparingly until new growth commences. A cool house is the best place for the plants, although they should have full sunlight.

SUMMER-BLOOMING LILIES.—For pot work during the Summer months L. auratum, L. rubrum, L. album and L. Melpomene all make excellent subjects; and where there is any demand for pot plants through the Summer and early Fall a collection of these lilies should be grown. Pot the bulbs and put them under a bench until they start growing, then give them the full light in a cool house, fumigating or spraying occasionally with tobacco insecticide to keep down aphis.

FOUNDED IN 1888.

THE FLORISTS' EXCHANGE

A Weekly Medium of Interchange for Florists, Nurserymen, Seedsmen and the Trade in general

Exclusively a Trade Paper.

Entered at New York Post Office as Second Class Matter

Published EVERY SATURDAY by

A. T. DE LA MARE PTG. AND PUB. CO. LTD.
2, 4, 6 and 8 Duane St. New York.
P. O. Box 1697. Telephone 3765 John.

REGISTERED CABLE ADDRESS:
Florex, New York.

YEARLY SUBSCRIPTIONS.

To United States, Canada and Mexico, $1.00. To foreign countries in postal union, $2.00. Payable in advance. Remit by Express Money Order, draft on New York, Post Office Money Order or Registered Letter. The date on the address label indicates when subscription expires.

BINDERS.

The publishers can supply binders which will hold the papers for one complete volume, keeping them in perfect order for ready reference. Price, postpaid, $1.25.

ADVERTISING RATES.

Per inch, $1.25. Special positions extra. Send for Rate Card, showing discounts on continuous advertising.

For rates on Wants, etc., see column for classified advertisements.

Copy must reach this office not later than Thursday to secure insertion in issue of following Saturday.

Orders from unknown parties must be accompanied with cash or satisfactory references.

ILLUSTRATIONS.

Electrotypes of the illustrations used in this paper can usually be supplied by the publishers. Prices on application.

BOOKS.

The publishers of The Florists' Exchange are headquarters for all standard books pertaining to the Florist, Nursery and Seed Interests. Send 2c. stamp for complete descriptive catalogue.

Owing to pressure on our columns this week with the Easter trade reports, several valuable articles have been crowded out, among them a most interesting one on "Noteworthy New and Little Known Hardy Plants," read by Mr. Greensmith, of Henry A. Dreer, Inc., before the Philadelphia Florists' Club.

"GRAFT," Bernardsville, N. J.—The Florists' Exchange does not publish anonymous communications. If you will forward us your full name and address—not necessarily for publication, but as an evidence of good faith, showing, also, that you have the courage of your convictions—your letter shall have attention.

Canna Mont Blanc.

The disseminators of this variety are CONARD & JONES CO., West Grove, Pa., and not as given in last week's issue, page 428.

Easter, 1903.

We present in this issue reports from quite a number of cities and towns showing that the Easter trade of 1903 was generally satisfactory and an advance on its predecessor, in some instances of 40 per cent., thus continuing the gratifying condition that has characterized the Easter business for several years. It was again a plant holiday. Stocks of all kinds, excepting carnations and violets in some places and lilies in others—certainly not in New York or Chicago—seem to have been sufficient for all demands.

Owing to the scarcity of carnations the sale of bulbous cut flowers increased in several localities. Among plants nothing new was offered. Azaleas of the lighter colors were great favorites, second to the lily. Rhododendrons had no great call; and among rose plants the Crimson Rambler, although, perhaps, not as extensively grown as formerly, was preferred to the hybrid perpetuals; in fact, the former seem to be supplanting the latter as well as the moss varieties. Hydrangeas of the deeper blue color found ready sale, but for the ordinary sorts no extra demand was experienced.

Spiræas sold fairly well; but genistas and acacias lagged; in fact, yellow, both in cut flowers and plants, appears to be passing out of favor at Easter. The popular predilection seems, too, in these latter days, to lean toward the plant, "unadorned," with the exception of an appropriate and plain pot cover. Where ribbon was used at all it took the form of a simple bow. Paper trimming, also, was but sparingly employed.

Very large specimens of any class of plant were not wanted.

For the continued increase in the Easter business much is no doubt attributable to the influence exerted by the daily newspapers. Page after page, containing articles and illustrations, have been devoted to accounts of the extent of the flower and plant trade at this festival; the materials available, and the prices to be charged. This is a feature of the holiday business the trade would do well to encourage. And it will serve the most useful and profitable purpose when correct and reliable data are furnished those in search of information on the subject.

Easter, 1904, comes on April 3.

The C. S. A. Exhibition for 1903.

The Chrysanthemum Society of America, through its president, Arthur Herrington, of Madison, N. J., is making most satisfactory progress in the matter of interesting various local societies, to the extent of these associations providing premiums to be competed for at the national Society's show, next November, by members of these bodies only. Already the Tarrytown Horticultural Society, the Morris County Gardeners and Florists' Club, and the New York Florists' Club have fallen in with the plan. It is understood, also, that the Massachusetts Horticultural Society has appropriated a substantial sum for a similar purpose; and, doubtless, other organizations will follow suit.

The plan proposed is something which no local society can object to, for, in addition to augmenting the interest centering in the exhibition of the C. S. A., the society contributing premiums in this wise aids its own membership as well.

A preliminary schedule, providing for a large number of classes, is in course of preparation, and will be issued as soon as definite arrangements with the American Institute—under whose auspices the show will be held—as to an exhibition hall and other matters, have been made.

In view of the increased enthusiasm in the work of the C. S. A., created by the very sensible decision of its officers to hold an annual convention in connection with the yearly exhibition, there is every reason to hope that a successful show will result. Doubtless, too, the Society will see the advantage of broadening its scope so as to take greater cognizance of the amateur element, both as regards its membership and exhibitions, and thus encourage the whole chrysanthemum cult, instead of, as heretofore, confining its efforts to the purely commercial side, which has narrowed its field and restricted its usefulness. This is now all the more imperative because of the growing popularity of the garden chrysanthemum in all parts of the country.

We would urge all associations favoring the proposed society or club contests to advise Mr. Herrington of their decisions thereanent, so that the schedule may be as complete as possible on that point before distribution.

American Carnation Society.

VARIETIES REGISTERED.

By A. Herrington, Florham Farms, Madison, N. J.

PHOEBUS—Yellow, with red markings; flowers about two and one-half inches in diameter and a free bloomer. A seedling from William Scott and Miss Audrey Campbell.

By Augustus Spies, New Springville, N. Y.

MRS. ERNEST FLAGG—Color, salmon pink, size equal to that of Mrs. Lawson; stem medium stiff, continual bloomer; excellent commercial variety.

ALBERT M. HERR, Secretary.

Dutch Horticultural and Botanical Society.

The floral committee of this Society, on March 25, 1903, granted first-class certificates to Tulipa Kaufmanniana coccinea, a new plant; also to T. K. aurea, shown by P. W. Voet, of Overveen, near Haarlem; to Iælia Jongheana, from W. C. Baron van Boetselaar, Maartensdijk; to Cypripedium × Mme. Hacke, from H. C. Hacke, Baarn.

Certificates of merit were given for Muscari Syovittianum sub-cœruleum, Chionodoxa lucillæ grandiflora alba and Iris Warleyensis, from E. H. Krelage & Son, Haarlem; to Iris Willmottiana, a new plant, from P. W. Voet.

Honorable mention was awarded to Viola odorata, a variety with pink flowers, from P. Vermeulen, at Wonnerveer; to Helleborus hybridus rosea superbus Otto Froebel, from H. D. Willink van Collen, of Brenkelen; to Cypripedium × Lathamianum var. Mr. Hacke, from H. C. Hacke.

A silver medal was given to D. J. Tas & Sons, of Aalsmeer, for a collection of forced shrubs; and to W. van Veen, of Leiden, for a collection of forced irises.

The Leonard Seed Company's Fire.

A disastrous fire occurred at the above company's wholesale warehouse, 71-73 West Monroe street, Chicago, on April 4, entailing a loss estimated by the insurance companies at 75 per cent. on a total insurance of $151,000, which is carried in 54 companies. It is creating considerable interest in insurance circles on account of the lawsuits which resulted from the firm's fire of 1899 in their warehouse on West Lake street and which were carried to the United States Supreme Court and decided against the insurance companies several months ago. The firm has opened at their new warehouse at 79-81 East Kinzie street, which was leased last November and was to be ready for occupancy by them May 1. They are able to fill all orders as they are received, although put to considerable inconvenience, and will be pleased to see all their old customers either at their retail store on Haymarket Square, or at the new quarters, 79 to 81 East Kinzie street, Chicago. R. J.

PAMPHLETS RECEIVED.

Catalogue of Greenhouses.

Lord & Burnham Co., Irvington-on-Hudson and New York City, have favored us with a copy of their new catalogue of greenhouses. Some 62 half-tone illustrations show the styles of greenhouse structures designed and erected by this firm in different parts of the country, both for commercial and other purposes. Other interesting data are also furnished.

Ferns and Fern Hybridizin

Editor Florists' Exchange:

I read with interest in a recent
of the Florists' Exchange the a
of W. N. Clute on the subject of
I am a pteridologist myself, and I
exception to certain statements in
article, particularly the one refe
to the hybridizing of ferns. I en
copy of a lecture delivered by m
fore the Newport Historical Sc
on February 16, 1903. I wish y
publish it in its entirety.

Hybrid ferns come by chance
through man's agency. The repr
tive organs are so small that th
not allow of man to work with
except with the aid of a powerfu
croscope.

Then, again, in my estimation
plenium ebenoides is only a var
of Asplenium ebeneum and is n
any way classed with Camptosoru
zophyllus; in other words, our
North American Scolopendrium
phyllum.

I would like to correspond wit
Clute on Cryptogamia.

T. FIELDHOU

[We regret we cannot afford spa
Mr. Fieldhouse's lecture in full,
goes very fully into the history of
generally. Referring to the hybr
tion of ferns, he says: "I have
asked many times if it were po
to hybridize ferns artificially so
produce new species, but it appe
me to be impossible. It is one
that has to be left to Nature
course, new ferns are all the tim
ing discovered, and we have q
quantity of hybrids, especially th
tive British ferns are very notic
The species Scolopendrium vu
found growing in limestone rock
in old wells, from which we have
ly 100 hybrids; Lastrea Felix-M
another example. I have many
sown spores of various species
gether in one pan or pot, but
never got anything new."

Mr. Clute replies to the fore
communication as follows:

Editor Florists' Exchange:

Your correspondent who has
doubts that ferns can be hybr
has apparently not had access
the literature on the subject.
students in general are so familia
the facts in the case that it did n
cur to me to mention the public
in which the information ma
sought. If your correspondent w
fer to back numbers of "The Fern
letin," he will find various notes
cerning hybridization; but the
complete work is Lowe's "Fern
ing," a British book selling for
$5.00 and one which treats the su
most exhaustively. It is quite
that the greater number of fern
ties have arisen as "sports," but
just as certain that others have
produced by hybridizing as I have
ed. If one, by careful work, se
the prothallus in such a way that
organs of a sex are left on each
and places pieces of one sex clo
those of another, it is not possib
anything but a hybrid to result.
is a dew-like substance which co
upon the under side of the proth
and when the antherozoids are
ated they swim about in this until
reach the archegonia. It is thus
for them to cross from one secti
another, provided the two are clo
gether.

There can be no doubt that suc
bridizing has been successfully do
the case of Asplenium ebenoides.
has only to consult the nearest bo
cal manual to find that this has a
been considered a good species,
as I have stated, it has often bee
timated that it is a hybrid. The h
dizer took prothallia of Campt
rhizophyllus and Asplenium ebe
and by planting the sectioned pro
lia close together, Asplenium eben
resulted. For references to the o
ing theories regarding this fern
may consult my book, "Our Fer
Their Haunts." Your correspond
right, however, in assuming that
hybridizing is a difficult matter.
quires both care and skill.

WILLARD N. CLU

Binghamton, N. Y.

Obituary

James W. Withers.

James W. Withers, of the American Gardening Publishing Company, New York, died Monday morning, April 13, 1903, in Jamaica, West Indies, whither he had gone in hopes of recuperating his health. He had been suffering from a complication of diseases for some time.

Mr. Withers was born in Welshpool, Montgomeryshire, England, 42 years ago. After receiving a common school education, he was apprenticed as a gardener on an estate near his native place in 1879, and followed his vocation successfully at different points for several years, having occupied some important gardening positions, and winning prizes for fruits, flowers, and vegetables at the leading exhibitions in England. In 1886, on the advice of Mr. Brian Wynne, the present proprietor and publisher of The Nurseryman and Seedsman, he went to London to better his gardening education, and there secured employment in the nurseries of John Laing & Sons, in their begonia department, growing many of the firm's exhibition blooms. While there he officiated as a judge at some of the South of England shows. The last three years of his residence in the old country were spent as a merchant, buying and selling on Covent Garden, the Boro, and other wholesale markets of London.

Coming to America in 1892, Mr. Withers entered the employment of the Oasis Nursery Company, at Westbury Station, Long Island, then under the management of Thomas Griffin, an old country acquaintance—a concern famous for its collection of tuberous and other begonias at that period. Subsequently he formed one of the galaxy of gardeners in the Pitcher & Manda establishment at Short Hills, N. J., where he remained until 1894, when he joined the staff of the Florists' Exchange. His conscientious work on behalf of this journal was highly valued by the publishers. In October, 1898, he purchased American Gardening from the A. T. De La Mare Printing and Publishing Company, Ltd. In 1901 his firm was converted into a stock company, incorporated under the New Jersey laws, with Mr. Withers as president and treasurer.

During his stay in the United States the deceased did some excellent work in the cause of horticulture. He took a keen interest in exhibitions and did everything in his power to encourage them. He was an active worker in various horticultural organizations, among them the New York Gardeners' Society, the Horticultural Society of New York, the American Dahlia Society, the New York Florists' Club, and others. He was a member of the S. A. F. O. H.; also of the F. and A. M. For several years he acted as manager of the flower shows of the American Institute, and through his instrumentality the horticultural section of that body was instituted. His services as a judge were much in requisition by the local horticultural societies; and for some years past he had officiated as one of the New York committee of the Chrysanthemum Society of America in the judging of new seedlings and sports.

In the untimely death of Mr. Withers horticulture has surely lost a valued exponent and true friend.

He leaves a widow and one baby a girl—to mourn his early calling away.

Emmerson Orvis.

Emmerson Orvis, Elmira, N. Y., died April 11. Mr. Orvis was of English ancestry and was born in New York State April 4, 1844. For over thirty years he had been engaged in the market gardening and wholesale florist business in Elmira, utilizing more than 100 acres of land and carrying on an extensive trade. For several months Mr. Orvis had been ill, suffering with a cancer of the throat.

The deceased was prominent in G A. R. circles. In January, 1862, he enlisted in Company I, 103d New York Volunteer Infantry, and was honorably discharged in the Fall of 1865.

Archibald F. Barron.

On Thursday, April 16, 1903, a cablegram was received from England by Leonard Barron, Editor of American Gardening, New York, announcing the death of his father, Archibald F. Barron, on that day. Mr. Barron was a Scotchman, and one of the best known British gardeners. He was for many years superintendent of the Chiswick experimental gardens of the Royal Horticultural Society of England, from which position he retired a few years ago. He was an authority on fruits; and his book on the grape, entitled "Vines and Vine Culture," is considered the standard work on the vinifera grape in Great Britain. The book has been translated into French. He was also the author of a work on British apples and one on pears.

For his services to horticulture, the deceased was awarded the Victorian Medal at the time of its distribution by the R. H. S. He was also the first recipient of the Veitchian Medal of Honor.

THE LATE JAMES W. WITHERS

Jacob Wride.

Jacob Wride, the veteran florist, of Auburn, N. Y., died last week. Mr. Wride was born in England sixty-four years ago, but had lived in Auburn many years and was one of its pioneer florists. The first of the present year he retired from active life, and with his wife took up his home with his son, E. G. Wride, in Chapel street. Several weeks ago Mrs. Wride died suddenly of heart failure.

Joseph Cochrane.

Joseph Cochrane, of Readville, Mass., died April 12, aged 59 years. He was in the florist business a long time. A widow, five sons and three daughters survive him.

The Grasscutter.

The thrifty man looks at his lawn,
"That grass," he says, "I'll cut at dawn."
! ! ! ! ! ! ! ! ! ! ! ! ! ! ! ! !

And this is how it looks, when o'er
The lawn he runs his dull lawn-mower:
/ / / / / / / / / , / / / / / / ,

"I see," says he, "it's merely bent,"
And back he goes, though well-nigh spent:
)))))))))))))))

"Well, I'll be switched! Confound such hay!"
He cries, "I'll go the other way."
(((((((((((((((

Grown desperate now, the shears he snatches
And cuts the grass—in gobs and patches:
—! ! !——(((——! ! !——)))——! ! !—

Only to find next day, at dawn,
A dandelion-spangled lawn:
* * * ! ! ! * ! ! ! * * * ! ! ! * ! ! ! * * *

THE EASTER TRADE OF 1903

Reports Show an Increased Business over that of Last Year, Ranging in Volume from Ten to Forty Per Cent. Plants still Favorites, but Cut Flower Sales Steadily Advancing

NEW YORK.—The Easter trade in this city was of a more satisfactory nature than has been the case for several years past. The weather was favorable, both Saturday and Sunday, a little rain fell on Saturday toward midnight, but there was not enough of it to have any deterrent effect on the cut flower business. The plant trade was of increased proportions over any previous year. This class of stock was landed at the stores earlier in the week than has hitherto been customary, and Easter displays throughout the city were, if anything, more elaborate than usual.

The wholesale plant market at Clinton and West streets did not show the activity usually noticed here, in fact, the interior of the market was only occupied by one or two stand-holders, but some forty or fifty men with their wagons were ranged on the curbstone in the neighborhood, the growers preferring to stand outside rather than enter the old market in its present unsatisfactory condition. The plant peddlers were the principal buyers at this mart and while all the stock offered sold at some price, it cannot be said that the fact of its being Easter Saturday brought any more money to the growers' pockets than would materialize on any other Saturday during the season. Azaleas and rhododendrons sold at 50c. and upwards, according to their size; hybrid roses, nice plants, could be bought at $4.00 and $5.00 a dozen, pans of hyacinths and of narcissus fetched $2.50 per dozen, cinerarias sold at $2.00 per dozen, and good geraniums could be bought at various figures, ranging from 80c. to $1.00 a dozen for the very finest. Lilies in pots went at 10c. per bud and flower. Large well-grown hydrangeas were offered at $4.00 and $5.00 per dozen, some of these were exceptionally fine stock and should have realized higher prices. It was not long after daylight appeared, however, that the contents of the growers' wagons had all been transferred to the wagons of the peddlers, and the latter were on their way through the streets of the city.

With the opening of the Cut Flower Exchange in the Coogan Building, at 5 a.m., the cut flower business of the day commenced. The floor space was crowded with people, and here and there among the crowd were seen some of the dealers from the commission district, evidently down for the purpose of getting a line on the business prospects. Lilies were in abundance and there was no standing out for high rates, the best stock sold at 8c. and poorer flowers went at 6c. Carnations, however, started off at a good figure, which was maintained throughout, $4.00 and $6.00 a hundred being realized, with the exception of some very inferior stock that only brought $3.00 per hundred. The supply of Ulrich Brunner roses was not large enough for the demand, the long stemmed flowers sold readily at $5.00 a dozen, and the short ones fetched $1.50 a dozen. General Jacqueminot also sold readily at 8c. and 10c. each. Tulips and narcissus of the ordinary kinds realized $2.00 per hundred, and there was a tremendous supply brought in. Double tulips fetched $3.00 and $4.00 a hundred, selling better than they had done for some days previous. Smilax, adiantum and rose geranium all went well, and when the rush was over everything had been cleared out, and every one was free to admit that business had been decidedly satisfactory.

The New York Cut Flower Company's room was thronged with buyers within a few minutes after it opened for business. Stock of all kinds came in plentifully, especially American Beauty roses. The top grades of these were started off at 40c. each, but that figure proved too high to be maintained and a general cutting was done before the stock was cleared out. Some went at $3.00 per dozen, and many much lower than that even, 15c. each being reached in some instances. Bride and Bridesmaid roses were anything but uniform in quality, and the range in value was a wide one. A few very fine Bridesmaid realized 20c. each, though the majority of the specials fetched from 10c. to 15c. each. Extras brought 6c. and 8c.; No. 1, 4c. and 5c., and anything shorter had to be sold at 1½c. and 2c. each.

Carnations went off well, nothing going much lower than $5.00 per 100 and fancy stock as high as $10.00 per 100.

Lilies were too plentiful to bring more than 8c. or 10c. each, and some went below these figures.

In the wholesale commission district supplies poured in heavily, roses and lilies being particularly numerous, also yellow bulbous flowers. American Beauty and the other roses held at about the prices already mentioned. Carnations were in brisk demand and good ordinary stock brought $5.00 and upwards per 100. Violets had a good call and the supply was below expectations; the prices ranged from 75c. to $1.50 per hundred, and there was not enough to go around. Flowers that last year would not have sold for 35c. per 100, were easily got rid of at 75c.; and it can safely be said that for the violet and carnation growers this has been the best Easter that has been experienced for several years.

It was painful, however, to see how the trade in lilies lagged. Where they all came from one can hardly tell, though A. N. Pierson, of Cromwell, Conn., and a Japanese firm in Secaucus, N. J., are responsible for a good many thousand blooms. It was simply no use in trying to keep up prices with such a stock in view, and the flowers sold at from 10c. down to 6c. each.

The lilies and the single and double yellow narcissus, of which there were also countless thousands on hand, formed the greatest glut in the market, and when the business wound up on Sunday afternoon the largest percentage of flowers left over were of these kinds.

Callas brought $1.50 per dozen and were in good demand. Pansies also were good sellers, realizing $5.00 per hundred bunches. Sweet peas sold well, as also did lily of the valley, though ordinary prices ruled.

The retail trade throughout the city was considered very good. More plants than ever before were handled, and while it was apparent that a little over-buying had occurred at one or two places, there is a general satisfied feeling.

Nothing new was seen in the flowering plant line, though at some of the Fifth Avenue stores some very blue hydrangeas were noticed. These were very effective when arranged among the other flowering plants and we have no doubt they proved good salable subjects. There were also some very well-grown plants of the yellow erica, E. Cavendishii.

In this issue are presented illustrations of some of the principal stores which give a better idea of the prevailing styles of window dressing in this city than any pen pictures could convey.

After Easter.

Although there has been quite a little doing among the retail stores since Easter, in the way of large weddings, etc., it cannot be said that the price of cut flowers in the wholesale market has held up as well as one would expect. The tremendous supplies of roses, lilies and some other bulbous stock available for Easter did not begin to abate much until the latter part of the week, and retailers who were fortunate enough to have extensive decorations on hand this week have been enabled to do the purchasing of cut flowers at their own figures almost. Take, for instance, American Beauty roses. One retailer required five hundred special blooms on Easter Monday, and they were bought at $10.00 per 100. In fact, the crop of American Beauty roses has been so heavy the past week or two that they have had to be sold at all kinds of figures in order to get rid of them.

Bride and Bridesmaid roses of the top grades have been firmer; an occasional sale of these has been made at 12c. each, though from 10c. down has been the rule.

Carnations have held up fairly well right through, good ordinary grades fetching from $3.00 to $4.00 per 100. The question as to whether the variety Mrs. Thos. W. Lawson is a fancy or not comes up occasionally, and we may observe here that there are more different grades of this carnation coming into this market than of any other flower.

During the Easter rush lily of the valley was not much in demand, and low prices were the rule. On Wednesday and Thursday, however, the supply was hardly adequate for the demand and a material advance in price resulted.

White sweet peas have also had a good call the last day or two. Violets are coming in in but small quantities and prices are keeping up well toward those obtained at Easter. Narcissus Von Sion and N. Princeps, of the improved type, can be moved at about $2.00 per 100, but the host of other yellow narcissi is the greatest drug in the market, and these flowers are freely offered at $2.50 per 1000.

Lilies are abundant and bring from 4c. to 6c. each. Competition was so keen on Monday last when it was known that several thousand had to be used at a certain function, that the lilies (we are informed) were finally placed at a figure below 6c.—and this on Easter Monday.

White and colored Dutch hyacinths are coming in plentifully and about $2.00 per 100 is all they realize. Gladiolus also is seen regularly now, but does not sell as fast as one would expect.

Smilax seems to be more plentiful and the price is weakening.

CHICAGO.—The Easter business, taken as a whole, was much larger than has ever before been done in this market. Probably better results would have followed had the commission men been advised of the quantities of stock likely to be thrown on the market, particularly in the case of lilies, a good many of which were to be seen around at the close of business on Sunday noon. From reports, it would appear as if a good many of these flowers had been placed in cold storage and held for Easter. Never before were there so many lilies sold as at this season. All growers have been well cleaned out of these. There were more roses on the market than has been the case heretofore, and they were fairly well cleaned up from day to day; a break, however, occurred toward the end of the week and prices were a shade lower than market quotations. The wholesalers had a very large shipping business to points much farther distant than usual, very many orders coming from Eastern florists. In fact, the shipping business here is extending from the Atlantic to the Pacific. A large number of lilies was shipped from Chicago to the New York market. McKellar & Winterson had one order for this class of stock from Cumberland, Md.

At this writing, with cloudy, rainy weather, everything with the exception of carnations is at a standstill; both the local and shipping demand has fallen off considerably, while cuts remain the same as last week.

Growers of potted plants for Easter are well satisfied with the trade done. All were sold out toward the beginning of the week. The call for flowering plants increases every year. No novelties were offered, although there would seem to be a good field for some one to take up this branch of the trade. All seen in the stores are bought in the East, and are evidently profitable stocks to handle.

The market for the past week has been good, and although much more stock was received than anticipated, prices have not fallen much below quotations, with the exception of lilies, which arrived in larger quantities than could be handled. The rose market is not so good as could have been wished for; bright days before Easter brought in an increased cut. The carnation condition stood as predicted; not enough were to be had to fill orders, while the prices obtained for carnations exceeded those at Christmas. Fancy stock ran as high as $10.00 per 100, and ordinary grades were hard to get at from $4.00 to $6.00 per 100. At present writing, Tuesday, the price has dropped considerably; $4.00 per 100 will take most of the fancy flowers, with the exception of Prosperity, Harlowarden and others which wholesale at from $5.00 to $6.00.

Bulbous stock of all kinds has sold well at prices quoted in Easter lists. A break in the market for lilies was experienced as early as Friday, and every dealer had more than he knew what to do with. Prices were down to as low as $6.00 per 100 for fairly good stock.

Violets were rather scarce, and those obtainable not of first quality. A great many were handed direct from the grower to retailer, the former going from store to store and selling in this way.

The call for miscellaneous stock was not too brisk. R. J.

ST. LOUIS.—From all the reports gathered from the different florists everybody seems well pleased with the Easter business done. The majority of them say that never before was there such a call for blooming plants, especially lilies. Of these latter there was a scarcity, and long before Saturday noon all had been sold. Prices ran from $1.50 to $5.00 per plant, according to the number of flowers on it. Hydrangeas and rhododendrons were of better quality this year, and were in keeping with the azaleas as to demand; in fact, everything that had a bloom on it found a ready sale. Mr. Weber, Mrs. Ayers and Young & Sons claim that at no other Easter did plants sell so well, with much better prices.

As to cut flowers, we had plenty of everything except violets. Cut Harrisii lilies and callas were in great abundance, as were tulips, lily of the valley, Von Sion narcissus and Dutch hyacinths. L. Harrisii brought $1.80, and callas, $1.50 per dozen; tulips, 3c. and 4c.; lily of the valley, $4.00, and Dutch hyacinths, $5.00 per hundred. There was a goodly supply of extra long American Beauty roses at $5.00 and $6.00 per dozen, with plenty of shorts at from $5.00 to $10.00 per 100. Bride, Meteor, Bridesmaid and Golden Gate were in good supply; for these the price was $12.00 for choice, and from that down to $4.00 per 100.

Sweet peas were very fine, with extra long stems, but not enough of these came in for the demand; from 50c. to $1.50 per 100 was the price. The few violets available sold quickly at $1.00 per 100, and the flowers not very good at that. Carnations had one of the greatest calls in the history of this market. The supply looked large at the three wholesale houses, but the orders ahead took nearly every flower in sight. The prices were $4.00 for the poorest and $6.00 for fancy stock. White is still very scarce in the market; with plenty of funeral work every day.

The wholesalers were kept very busy with both shipping and local trade. They all claim that this was the biggest Easter they have had in years. Great quantities of lilies were disposed of. Kuehn handled 1000 for the Veseys of Fort Wayne; Ellis and Berning handled an equal number for others; among the three nearly 10,000 lilies were disposed of. The quality of the stock was generally good. Very few complaints were heard as to pickled flowers. ST. P.

BUFFALO.—The recent predictions regarding prospects of a good Easter trade were largely verified in a happy degree. The weather lent influence that allowed easy delivering of plant stocks, as a rule, though in the rainy rawness of Saturday afternoon and evening, and part of Sunday, it mitigated against cut flower business and reduced that item somewhat.

On all sides, in retail lines, comes the report of a trade nicely in advance of that of any former year, the guesses on the increase ranging variously from 20 to 30 per cent. over that of a year ago, some estimating much higher.

It may be referred to largely as a plant trade event. The uncertainty of definite supplies in flowers, coupled with high values demanded, led retailers to concentrate energies on the plant trade, and flowers can hardly be said to cut much of a figure beyond the supplying of the select grades that in any event will beget a certain call. It would seem, too, as though some shipments of flowers were held back too late in the week. Certainly some stocks in roses offered late Saturday went begging for buyers. Some kinds of bulb stock were a bit in over-supply, also. Violets came in in goodly lots, and fair qualities, but the demand called for more. Carnations, too, did not seem to show up in quantity proportionate to their importance and demand, and at wholesale were generally divided up in allotments to regular customers. The quality of bloom generally was above the average.

As to prices, 25c. per bloom for lilies, either cut or on the plants, seemed to be a settled figure with everybody at retail. A department house advertised the offering of a limited stock at 20c. per bloom, but it evidently exerted no influence. The supply was short of the demand, so the regular price was readily gotten. Some short growth stock, that was recently treated by planting from 3 to 5 plants in pans, went off nicely, being easy to handle, and making, too, a good appearance. Rhododendrons sold better than last year, the lavender tinted variety Catawbiense being prominent, and perhaps most effective. A limited number of nice lilacs offered sold well, as also did hybrids and Crimson Rambler roses, the which, too, were not grown in such large numbers as sometimes before.

The stock of azaleas, as a rule, cleaned up well also. In these, local growers discreetly gauged the stocks provided, more nearly to the probable demands, so better results will be netted.

Some of the retailers worked off a fair number of novelty baskets filled with blooming plants, and more or less embellished in fanciful finish.

Though never seen of nicer quality, Dutch hyacinths in pots and pans seemed almost a drug. Double light pink Murillo, and the bright yellow and red Tournesol tulips, in pans of liberal dimensions, met ready sale and, in some quarters, an unsupplied demand for mignonette in pots were noticed.

In the retail Main street stores, the prices obtained at retail for cut flowers naturally varied materially. For good grade blooms they seemed to run, in Bride and Bridesmaid roses, from $2.00 to $4.00 per dozen generally, exceptions going as high as $5.00; Meteor and Liberty, $3.00 to $4.00; American Beauty, $6.00 to $18.00. Carnations are mentioned at all prices between $1.00 and $2.00 per dozen. Violets went from $2.00 and over; and bulbous flowers from 75c. to $1.00 per dozen. L. H. Neubeck had provided a lot of Antirrhinum majus in good large sprays, but found the demand for it hardly encouraging, even at $1.00 per dozen. But sweet peas here, at 15c. for bunches that might be called modest, came short of the demand. VIDI.

CINCINNATI.—Easter business was the largest ever experienced in this city. Cut stock of all kinds sold well and at fair prices. Of carnations, there was not one-tenth part enough to go around. Peterson's hydrangeas and Crimson Rambler roses were the finest plants seen. All lilies sold, and at good prices. The stores and wholesale houses here had all they could handle. Heller Bros., of New Castle, still stand as kings among rose growers, and always have stock when it's needed. W. K. Partridge also had a fine Easter cut.

In the Jabez Elliott flower market the growers did a tremendous business in plants. Cut stock sold well there also.

No special plants were noticed, only the general line usually seen at Easter.

E. G. GILLETT.

DUBUQUE, IA.—Total Easter sales reached about 25 per cent. more than last year's, the increase being chiefly in flowering plants. Ornamental foliaged stock was not in demand. Prices were about the same as those ruling in previous years. On Saturday the weather was ideal, both for sales and delivery. Friday and Sunday it rained. W. A. H.

TSBURG. Everybody was satis- with the Easter trade. I think I safely say it was the best ever ex- nced, and if the weather had been favorable everything would have cleaned out. It rained almost the day Saturday, which hurt the sale ants very considerably; and also af- d store trade to some extent. The nd for cut flowers was brisk. Peo- were not complaining much about the prices, which were about the same ose of last season. Good lilies were dant, selling well and averaging t $3.00 per dozen retail. The best ght 15c. wholesale. Callas were in demand at the same prices as L. sil. Roses were not too plentiful, as s were somewhat afraid of buying high prices prevailing. American ty sold at $10.00 per dozen and bet- Bride and Bridesmaid at $3.00 up- , the stock was choice. Carnations well at from $1.00 per dozen and ud; at wholesale from 5c. to 10c., verage price being about 7c. The of carnations was better than usual Easter, with an increased demand, with many dealers a shortage was able early Saturday afternoon. t peas were scarce. Mignonette and s were in fair call; yellow daisies too high priced. Bulbous stock was abundant, but sold remarkably well r figures. Good tulips, costing from 6c., sold at from $1.00 per dozen d. Daffodils brought from 75c. up dozen; cut hyacinths were not plenti- All bulbous stock was pretty well d up. Some bunches of outdoor were in about the first of this sea- shipped from the South.

re was an abundance of plants, dec- and blooming, selling well at prices. Azaleas brought from 75c .00 apiece at retail; Crimson Ram- roses from $3.00 to $15.00; hydran- all prices; hybrid roses, good s, in bloom, from $1.50 up. Genistas very slow. Tulips and daffodils in and pans sold at good prices about er bloom; hyacinths at 15c., two e found ready sale. The markets illed with plants, and if the weath- d been better many more would been sold. E. C. R.

EVELAND. Easter of 1903, taken whole was the largest one for the s in many a year. The only item marred the event was the weather, day before Easter being one of the days that we have had this Spring. y long the rain came down and the rature was near the freezing mark uyers had things, as far as weather oncerned, against them. The week d brisk, with plenty of shipping s and at the end of the week some s were all bought up. Crimson Ram- oses are still favorites, and for color k this season has done them proud, all of them were lacking that blue ist so often seen in other years. e lilac in pots sold far better than before, and large quantities of them disposed of. Azaleas did not sell as well as in other years, perhaps se so many of them were a little their good use. Hybrid roses in proved one of the fastest-selling s, and more could have been dis- of had they been obtainable. The of lilies in pots was not near up to of other years, and there seems to reason; the buyers simply passed by. Colored tulips in pots and pans great favorites, while the lighter had a tendency to drag. Hya- s were moved in large quantities, some really good ones were to be Spiræas, deutzias, daisies and hy- eas were slow sellers, and of these plenty were left over.

ut flowers, violets had the lead, and at were available went at good , and, in most cases, fancy figures the rule. Carnations were favorites cond place, and there was not near- ough to go around. The very poor- rades sold readily at $1.00 per dozen. were in good supply, although the was not as good as in other years. ulbous stock of all kinds sold well much better than in former years. e Easter the weddings have start- come thick and fast, and flowers till at holiday prices. Should the dark weather continue, a real ty will be the result. G. W. S.

LTIMORE.—Most all are satisfied the Easter trade, which showed no advance over that of previous years. s of themselves cut no figure, but a deep cut in the accounts, as they scarcely to be had, and lily of the did not fill their place. Carna- were not over plentiful, neither were

nts went well, medium sizes more ularly. Bulbous stock sold fast, but Soft and salted roses were in nce; in fact, some of the growers id it. Easter, 1903, was good, but poch making.

EDWIN A. SEIDEWITZ.

ATTLEBORO, VT. — The Easter here was the best it has ever been. were just about enough lilies to y every one. D. McGillivray had nest lot ever seen here. His daffo- ere fine, too. The prices were about ame as last year. The supply of thing was good, and the weather at could be desired—calm and pleas-

OUTSIDE EASTER DISPLAY OF ALEX. McCONNELL, FIFTH AVENUE, NEW YORK.

ST. PAUL.—While weather conditions were not perfect, Easter trade was exceedingly good, and everything sold at good prices. The week was a busy one from start to finish. Everything was in good demand, and when one kind of plant was all sold, the buyers readily turned to another. Lilies, as usual, had the call, but these popular flowers were not equal to the demand, and but few good blooms remained after Friday night. The wholesale price was 15c. per bloom. There seemed to be a good sale for all colored flowers, and with the exception of lilies, they sold quicker than white ones. There was the usual good supply of azaleas, hydrangeas, Crimson Rambler roses, spiraeas, Hybrid roses, genistas, lilacs, etc., etc. For novelties Swanson had standard snowballs and Wistaria sinensis in tree form, as well as fancy baskets filled with bulbous stock and trimmed with ribbon. May & Co. had baskets of hyacinths, automobiles, etc., which were both attractive and salable. All the others had fine displays of excellent stock, the most noteworthy being Halm & Olsen's and E. F. Lemke's.

In cut flowers the colored stock was sold the quickest. American Beauty roses and violets took the lead. Liberty and Meteor were also in great demand. White carnations and other roses were also popular.

A conservative estimate indicates an increase of 12½ per cent. over previous years' records. One daily paper had the estimated sale of flowers in St. Paul for Easter week at $10,000; 1-10 of that estimate would be nearer the truth. The weather was detrimental to shoppers, but as everything was sold and delivered in good shape, no serious complaint can be made on that account.

Shipping business was unusually brisk and surpassed all previous records. Altogether this Easter was another record-breaker, and no one has reason for complaint.

Visitors since my last report were J. D. Thompson, of Joliet, Ill., and Mr Blaauw, of Boskoop, Holland. VERITAS.

GRAND RAPIDS.—Trade conditions were strong all the week; shipping was steady, and, the last three days, heavy. Retail trade was never better. The supply of stock to meet the Easter rush seemed almost inexhaustible. In lilies, the supply was large. Crabb & Hunter cut over 15,000, besides handling pot plants. Henry Smith bought most of his Easter pot plants, except lilies, of which he had plenty. The Grand Rapids Floral Company were well stocked with both plants and cut flowers. Crabb & Hunter gave a special sale at Brown's seed store. Other sales were held at the Boston Store, Herrick's grocery store, and last, but not least, the wagons alongside the curb, belonging to Peter Kunst, Freyling & Mendall and Bruinslot & Son. They sold large quantities of pot plants. As predicted, carnations were in short supply; roses equal to the demand, while in other lines there were plenty and to spare.

Not being able to get carnations, plants proved a very satisfactory substitute, and more plants were sold from a money value point of view than cut flowers.

In pot plants Crimson Rambler roses and azaleas stood next to lilies in public favor. Dwarf lily plants were very suitable for the purpose. The bulk of the bulbous pot plants were handled by the wagons, cheap, so the stores, in a measure, felt the influence. Early in the week the Boston Store (dry goods) had a special sale of dormant hardy rose bushes at 15c. each, two for a quarter, followed by an American Beauty pot plant sale at 50c. apiece, fine plants. This was followed by a lily sale, the variety was extremely dwarf.

Cut flower prices were as follows: Carnations, 75c. to $1.00 per dozen, although the wagons cut to 50c. in some instances; roses, $1.00 to $1.50 per dozen; American Beauty, $3.00 to $6.00 per dozen; lilies, $2.00 to $3.00; violets, 20c. per dozen; tulips and lily of the valley, 50c.; daffodils 75c. In plants, the lily led. Dwarf plants sold at 15c. per flower and bud, the tall plants at 20c. per flower and bud; azaleas, $1.00 to $5.00, according to size; $1.50 to $2.00 was, however, the popular price. Crimson Rambler brought 75c. to $2.00. Both Smith and the Floral Company had some very fine specimens. Hardy roses reached 50c. to $1.00; violet pans, 25c. to $1.00 each; hydrangeas, 50c. to $2.50; not as many of these were sold as usual. Daffodils and tulips in pans went at 10c. up, according to the number in a pan. Hyacinths sold in immense quantities at 15c. to 25c. in 4-inch pots. There was any amount of pot plants left over, but had it not rained and stormed everything would have been cleaned out. Very little business, comparatively, was done after 2 o'clock Saturday afternoon. As a whole, business was better this year than last by about 20 per cent. increase. Of course, there was a large increase of glass to be allowed for. G. F. C.

KALAMAZOO, MICH.—Easter trade fulfilled all expectations here and every one reports satisfactory business. The weather was bright and pleasant all the week, which helped open up the buds as well as to bring out the buyers. All kinds of flowers were in sufficient supply except, perhaps, carnations; however, these have been short all the season. Pot plants sold as well as usual, lilies, of course having the call. These fetched 20c. per bud. Of novelties none were in evidence, but a very nice, desirable line of standard plants was carried by every dealer. Prices ruled a trifle higher than usual: Roses, from $1.50 to $3.00 per dozen; American Beauty, $3.00 to $5.00, a few long-stemmed 75c. each; carnations, 75c. to $1.00 per dozen, a limited number being sold at $1.50 and cheap grades at 50c. Lilies brought 20c. per bud, daffodils, 75c. per dozen; lily of the valley, 75c.; violets, 25c. Green material the usual prices. The wholesale prices ruled about the same as those of Chicago. Prospects for a few weeks more business appear promising. S. B.

ELMIRA, N. Y.—Easter, 1903, was notable for favoring conditions of weather. Locally, I do not recall anything like it, and it enabled us to make a grand display outside as well as in. The charming weather was the supreme factor of success in record sales.

While it was a plant Easter, cut flowers were equally in demand. The call for violets was extraordinary, beyond all anticipation, and the supply was soon exhausted. Lily of the valley, both in cut flowers and growing plants arranged in pans, baskets, etc., sold better than usual. Roses and carnations, where quality was in evidence, were short of the demand. Rawson had a corner on lilies and Leavitt a superabundance of rhododendrons. The latter make a fine show, but azaleas are preferred by the retail trade. Azaleas in light colors were the best sellers. While you could not say bona fide novelties were much in evidence, there was much variety, not usually seen at Easter. Ixias were specially attractive as cut flowers. Large pans of daisies, forget-me-nots, and choice pansies filled out many cemetery orders. In most cases, the decking out of plants with ribbons, etc., curtailed their sale. "Fussy-looking" arrangements were passed by, beauty, natural and unadorned, being much preferred. Would this be called "the nude" in plants?

Prices were but little in advance of the usual Easter figures; sales about 25 per cent. to 50 per cent. additional in some instances. Several stores had annexes. Easter, 1903, was an actual record-breaker—one long to be remembered.

GROVE P. RAWSON.

SYRACUSE, N. Y.—Total Easter sales average greater. Prices were about same as last year, except on carnations, which were higher—$1.50 to $3.00 per dozen. The supply of plants was equal to the demand, save lilies—only one florist reporting enough of these. In cut flowers carnations were scarce. Violets were in demand but none were to be had without sending away for them. Palms and Boston ferns sold poorly. But nearly everything in flowering plants went well except spiraeas and cinerarias, which in this market seem to be "back numbers." In cut flowers everything sold well—daffodils better than formerly. Carnations were most in demand, but on account of the shortage and high prices the trade was shifted to bulbous stock considerably. Crimson Rambler roses led the hybrids. Baskets of miscellaneous flowering plants sold readily. An increased demand was apparent for flowering plants, especially for the cheaper ones.

L. E. MARQUISEE.

NEWARK, N. J.—Trade this Easter was better than that of last year, especially in plants. Azaleas sold very well, as did lilies and other seasonable stocks. Bougainvilleas are becoming favorites here. Cut flower business was fair, violets having a good call.

A. BERGEROW.

BOSTON.—Easter business this season proved very satisfactory to all concerned. Plant trade was enormous; with the growers everything that was in flower sold, and, this season, the day coming so late gave all a chance to have lots in bloom, so that all in all it shoud prove the most profitable Easter with the plant growers in recent years.

In cut flowers, too, the trade was immense, with carnations and violets at the head. Roses, however, never sold so poorly at Easter as this year. This remark applies to American Beauty and other colored roses, as well as to white ones. The supply of roses was very heavy. Bulbous stock, as usual, moved very slowly; but with these two exceptions the enormous quantity loaded upon this market on Friday and Saturday was disposed of with ease at equally as good figures as those of a year ago.

In roses, no advance in values was obtained, as early in the week it was seen that this stock was moving slowly; in fact, no advance was asked, most growers being satisfied could they dispose of all their cut at the prices that prevailed last week. General Jacqueminot, Ulrich Brunner and Souvenir du President Carnot, which were not very plentiful, sold out well; but American Beauty, Bride, Bridesmaid and others of the more plentiful kinds moved slowly.

Carnations cleaned up exceptionally well and the supply was very good, a few white ones being about the only things to be had at the wholesale markets Saturday evening. Good ordinary stock made $4.00 to $5.00 per 100, with extras and specials at $6.00 and even $8.00 per 100.

In bulbous stock no change in prices was realized on Von Sion and Trumpet narcissus, tulips or such stock. Lilies early in the week were held at $12.50 per 100, but by noon Saturday many were offered at $10.00. A little batch of L. candidum, of excellent quality, was brought in by Mann Bros. These sold very well at $4.00 to $8.00 per 100 flowers. Lily of the valley was in very good supply and sold pretty well at $3.00 to $4.00 per 100.

Violets were in great demand, especially, as the supply had shortened up somewhat, owing to the running out of the crop of Princess of Wales with many growers; 75c. per 100 was easily realized for good stock. Small bunches of sweet peas, pansies, Mayflowers, primroses, marguerites, etc., sold well.

There were few, if any, novelties in either plants or cut flowers.

This week business was fairly good Monday and Tuesday, but Wednesday it fell flat. Everything is in good supply and carnations are lower in price again, making $2.00 to $2.50 for the best of ordinary sorts, with the better kinds at $3.00 and fancies at $4.00 per 100. Roses are very plentiful and are moving slowly. Violets are selling well at 60c. to 75c. per 100. Bulbous stock continues in overstock, though not to such a degree as was the case two or three weeks ago, and values are about stationary. Quantities of stock were shipped to Newport, R. I., on Monday to be used in decorating for the Vanderbilt-Neilson wedding. F. J. N.

WORCESTER, MASS.—The florists of this vicinity had been anticipating a prosperous Easter, and with one or two exceptions their hopes were realized. One firm had the misfortune to leave windows open during the cold spell of April 5 and 6, and lost more than 200 pots of lilies and some other stock. Violets were scarce, but other flowers were in profusion, with prices about as usual. No specialties were introduced, regular work demanding all attention.

Potter & Cousins, of West Boyleston, only make a specialty of carnations and bedding plants. They report their trade as far ahead of last year's. Fisher & Son did not have as many flowers as usual. They have closed up their branch store and devote their whole time to their old stand, near the post office. The Boston Store (Denholm & McKay Co.) did not see much change as compared with the business done a year ago. H. F. Littlefield had a tremendous sale. He is reaching out more and more each year for church decorations and this season had ten to care for in addition to his greatly increased regular business. He also reports a large number of orders booked for Memorial Day.

Chas. D. Mackie was very much pleased with his first Easter season. He makes a specialty of house decorations for weddings and receptions. Quite a number of churches fell to his share and April 14 he decorated for a large home wedding. April 15 he moved into new quarters. F. D. Madans had a better trade than last year. H. F. Lange had an usually heavy sale. He had a number of churches to decorate. Barnard Sumner and Putnam Co. run a flower department in their large store, which is under the general supervision of one of the regular florists of the city. W. E. Sargent considered the trade about as last season. CAROLUS.

PITTSFIELD, MASS.—The prices for cut flowers were about the same as last year's, as was the amount of business done. The quality of the flowers was not so good, especially of roses, which were in great demand when good. Carnations sold best.

All blooming plants, if in good condition, sold well; not much call for palms was experienced. Japanese pot lilies sold well. I had some excellent L. Harrisii. In a general way I am inclined to believe that plants of every description, in good shape, sold readily.
JOHN WHITE.

NEW BEDFORD, MASS. — Easter trade was ahead of that of former years. The best selling stocks were carnations and lilies. The prices for the former were higher than those of last year.
W. S. BROWN.

NEWBURYPORT, MASS.—E. W. Pearson has a force of men at work clearing the land between his office and Marlboro street, and he will begin work at once on the erection of a new greenhouse which will be used exclusively to grow carnations. Later on he will build to the street with an office in front.

SOME OF THE ORNAMENTAL PLANTS SHOWN AT "THE ROSARY," NEW YORK.

LEOMINSTER, MASS. There was an increase of 20 per cent. on the sale of lilies over last year's. Bulbous stock was not in great demand. Carnations, retail, brought 75c. to $1.50 per dozen for fancy flowers. Lilies realized 20c. to 25c. per bud or bloom. Crimson Rambler roses realized from $2.00 to $3.50 each.
J. FULLER.

PROVIDENCE, R. I.—For a week preceding Easter there were constant weather uncertainties, and even at this date the rain and chill remind us of the narrow escape from a repetition of the past two years at Eastertide. But this time we had a glorious two-days' feast of sunshine and warmth, and everything moved smoothly, especially the deliveries.

Violets were a vexatious problem with a great shortage and a clamoring demand. These flowers fetched 75c. and $1.00 per hundred, wholesale, for poor stock, and sold for twice that figure at retail.

Carnations cost the trade 3c. and 4c., and sold at 75c. and $1.00 per dozen. The quality was generally good on a short cut. Roses were in full crop and, strange to relate, there was a quantity left over on some growers' hands, and the stores found no difficulty in obtaining full supplies of Bride and Bridesmaid, which realized $1.50 to $3.00 per dozen.

Next came the bulbous flowers. Made up in pans they find considerable sale, but the people overlook them as a cut flower product. Alney had a beautiful lot of tulips and daffodils, grown well, but for all that the public balked at buying them.

Hoffman grew fewer of them this year and perhaps is thus open to congratulation. Anyway, these flowers were quoted at 2½c. and 3c., and brought 50c. to 75c. per dozen for what were sold. Good white tulips were scarce.

Lilies were completely used up at 10c. and 12c. per bud, and the demand exceeded the supply. Perhaps lilies gave the most satisfaction of anything handled this Easter.

The department stores made desperate efforts to obtain a business in flowers, and cut each other. Meanwhile the industrious, fair-minded retail florist is obliged to suffer in mind and purse, only waiting for the time to come when the growers will cut each other in bidding for this outside business. C. S. M.

WOONSOCKET, R. I.—Easter trade this year was better than ever before, with prices about 40 per cent. higher than last year. Every florist in this city sold all his stock and had to get flowers from Boston wholesalers to fill orders. Carnations brought $1.00; single tulips, 65c. to 75c.; double tulips, $1.00; cut hyacinths, $1.25 per dozen. Roses sold for $2.00 to $2.50 per dozen for ordinary stock. Callas went at from $2.50 to $3.00 per dozen; L. Harrisii in pots at 20c. to 25c. per flower and bud; cut lilies at the same prices. Tulips, hyacinths and Von Sion narcissus in pots sold at about 25 per cent. better prices than those cut and sold by the dozen. There were no novelties offered this year.
THOS. H. GREENE.

NEWPORT, R. I.—Easter trade this year was ahead of that of all previous years, both in quality and quantity of stock. Pot plants sold much better than formerly. Lilies were all sold out on Saturday night, realizing 25c. per bloom or bud. F. L. Zeigler's store was packed to overflowering all Easter week; he cleared out everything excepting a few azaleas and genistas. His Crimson Rambler roses were a fine sight; he handled most of the plants sold in town. Bulbous stock went slow at first, but finally cleared out in fine shape. Cut flowers sold well, especially lilies and carnations.
T. F.

HARTFORD, CONN. — Easter trade was far ahead of that of last year or any previous year, and the amount of business done compared with last year was perhaps 25 per cent greater. We had ideal weather. It was indeed a plant year, and the trade in that respect seems to be growing yearly. Lilies and azaleas were perhaps the best selling plants. The former sold for 20c. a bloom almost everywhere, and the plants averaged in price from 75c. to $1.50 each, some selling at $2.00 each. Azaleas brought from $1.50 to $5.00 each, the medium-priced ones going best. Tulips in pans also sold well, at from 75c. to $1.50 a pan. Genistas and spiræas did not seem to go as well as in former years, although there were some very good specimens of each to be had. The former brought $1.00 and $1.50 each, the spiræas from 50c. to $2.00 each. There was also a good demand for hyacinths in pots and pans. They brought, in pans, from 50c. to $2.00 each, and a single bulb in a pot 25c. each. Daffodils in pans sold well at 75c. and $1.00 a pan. There were but few Crimson Rambler roses in the market; they sold well at from $2.00 to $5.00 each, and were good specimens. But little call was experienced for hydrangeas, rhododendrons or lilacs, and there was but a limited supply of these, but it was plenty large enough for the demand. There was a number of calls for small plants, and many small cineraria plants were sold for 25c. each, geraniums and heliotropes at 10c. to 25c. each.

In the cut flower line perhaps the largest call was for carnations and violets. The former were very scarce, consequently the prices were somewhat high, and many customers bought bu flowers rather than pay the prices for carnations. The commoner var of the latter brought $1.00 a dozen, Mrs. T. W. Lawson, Prosperity and others realized $1.50 a dozen. V were rather poor in quality, mar them being small and light in caused by the warm weather prec Easter; they brought $1.00 a hun Roses sold well, the call being for and Bridesmaid, which were very f quality, and sold at from $1.00 to $ dozen. There was a good demand f kinds of bulbous flowers, of which was a good supply. Daffodils, tulip Roman hyacinths sold for 50c. a lily of the valley 75 cents a dozen mignonette at from 50c. to $1.00 a
J. F

CROMWELL, CONN.—Compared one year ago, the Easter trade o ran considerably ahead. There v very heavy shipment of lilies and a ter prices than were obtained last There was a better demand for l the valley of the best quality, abou 000 being shipped during the week ceding Easter. Violets had a larg but owing to the unusually warm w of the past month these flower been forced along so fast that the ply was nearly exhausted by E Roses were, as usual, in good dema fair prices, ranging about the same year ago, and the supply was su to fill all orders, although the house cut to the limit to meet the require Carnations seem to be increasing in larity every year, especially the varieties. The sales were far in of those of one year ago, althoug supply was much below the de There was a large sale of Crimson bler roses and at better prices tha merly, everything in this line bein posed of.

The new electric light plant ha completed and was found very s able before Easter, when the p rooms were run all night to fill the for the early morning trains. It necessary at this day to say anyt the convenience of this method of ing. And when the matter of sa considered, owing to the absen matches and the dangers that attend the use of kerosene, there is ng to compare with it in a large house plant.

The shipment of grafted rose which was somewhat delayed duri Easter rush, has been very activ week, about 50,000 plants having acked and started for their vario tinations.

NEW HAVEN, CONN.—The Easter was one of the best in years, with good prices and a lar mand for pot plants, lilies leadi azaleas a good second. There fine lot of tulips, hyacinths and sus in pans, for which there larger call than in former years. well-grown Crimson Rambler ros well. Roses, carnations and vio cut flowers sold well; violets wer in supply and commanded good Champion, Munro and Moore had church decorations. Prices were the same as last year's—carn 75c. to $1.50; roses, $1.50 to $3.00 cissus, 75c. per dozen. W.

SYRACUSE, N. Y.—Glorious w Saturday and Easter Sunday help florists clean out pretty thor Trade was about 25 per cent. large last year's. Pot plants were in go mand. Azaleas sold well, as did well-done Crimson Rambler roses. only thing in the way of novelties some pretty baskets filled with and bulbs by Quinlan & Co. Lilie very scarce—not nearly enough of to go around—the disease has raised and some growers declare they wi up the attempt to grow lilies a year. Cut flowers were very high- which made the call for them shorter than usual. Many purc contented themselves with a flo plant instead. Azaleas had the firs roses second. Potted bulbous stoc very well.

In cut flowers, carnations were n demand. Roses sold fairly well. were scarce. Bulbous flowers of all were plentiful and prices of pot were about the same as in previous of cut flowers, about 50 per cent. than ever before; that is, for roses nations and violets. The following prevailed generally: Cut flowers, can Beauty roses, $9.00 to $24. dozen; Bride and Bridesmaid, $3 $5.00; Perle des Jardins and Sunset, to $4.00; Meteor and Liberty, $2 $4.00; carnations, $2.00 to $3.00, n less than $2.00 per dozen; lily of th ley, $1.00; daffodils, $1.00; tulips, violets, $3.00; hyacinths, cut, $3. dozen.

Pot plants—Crimson Rambler $1.50 to $5.00 each; azaleas, $1.50 to hydrangeas, $1.00 to $5.00; spiræa to $1.50; hyacinths, 25c., and lilies up.
B

ELIZABETH, N. J.—Easter trad year was at least 20 per cent. bette last, with a greater demand for blo plants of all kinds, at a good fair Azaleas proved the best selling st
JOHN WH

WINDOW DISPLAY OF "THE ROSARY," FIFTH AVENUE, NEW YORK.

LADELPHIA.—The general ver- of both growers and retailers Easter business is that it was satisfactory. We have heard year that this one did 20 per cent. , the other one 10 per cent. bet- nd so on; but, leaving out actual s, there is no doubt the volume of ess done is annually slowly in- ing. It is clearly evident that before were so many plants in sold around this city than last It really causes one to stop and of the vast resources that are us, after visiting the florists' and viewing their immense dis- , also the large quantity of stock at the seed stores and the large tment stores. Then, as you go d the city and see every avail- empty store, either in use by a er for a delivery store, or occu- by a grower retailing his surplus , the amount thus offered was nous, and you wonder where it all go to. On Friday and Satur- housands of plants were seen on idewalks; all cheap stock most would say. But no! Plants were that retailers were looking for on sday. I, myself, saw two rhodo- ons, one of them fit for any re- store; so, evidently, most of this was bought early in the week, as bad weather started Saturday noon, much of it remained unsold. he retail stores sold out well, of them even had to stop selling s by 6 p.m. Saturday, and to put entire force at the cut flower s. Owing to the fact that a lot of ng orders were booked for this , several retailers had growers re- plants for them for delivery. g the growers, it is learned that ents of plants to New York were than usual this year, but many were sent West and South than evious years.

cut flower business was also very There was a slight scarcity of tea roses. Carnations and good s were also scarce, everything being in sufficient supply for all nds.

bad weather on Easter Sunday very disastrous to the florists at eashore. One retailer at Atlantic told me that his receipts were on Saturday and only $200 on ay, against $1,100 last year; and of the stock was an entire loss. weather has been bad ever since. large amount of stock offered this proved detrimental to many small s, as there was lots of cutting of s late on Saturday.

ists around the cemeteries did o so well this year, as the bad weather on Sunday kept a great many cash customers away.

The display of bulbs in Independence Square is now very good, and worth going to see. The bulbs were all supplied by Henry F. Michell; and he has already received several letters complimenting him on the excellence of the stock.

The seed houses of this city are all well pleased with business so far. The season is a good one. High prices on many things have tended to turn people's attention to other seeds on which the margins of profit are better.

DAVID RUST.

PHILADELPHIA, PA.—John Welsh Young will build two greenhouses, each 100x22½ feet.

OMAHA, NEB.—Easter trade this year was the best we have ever had. Some of the florists report a third more business than in previous years, but take it all through, we might say it was 20 per cent. better than last year's. The weather was a great help, as we had the nicest Easter week for many a year. It made the lilies come out in good shape. Cut flowers were plentiful, especially roses. Stock was good this year and brought good prices. Some lilies were shipped to and sold at one of our department stores for 15c. a blossom, although they were not worth 10c. The regular florists sold all their lilies at 25c. a flower; some reductions were made to churches. Azaleas went well. Hyacinths sold likewise; and good cinerarias went like hot cakes.

In cut flowers, roses sold at $1.00 to $1.50; American Beauty at $2.00 to $8.00 per dozen; carnations, 75c. to $1.00 per dozen. Bulbous stock was more in demand than at any Easter in the last ten years; in fact, all the season it has sold out every day. Violets and lily of the valley did not sell as well; the price of violets was too high for the quality.

The florists did themselves proud this year in making fine window displays. S. B. Stewart had his window banked with lilies and an assortmet of cut flowers. A. Donaghue's window showed a nice lot of azaleas, lilacs and cinerarias, very nicely arranged. Peterson Bros. had a fine lot of lilies, hyacinths, bunches of daffodils and tulips. Arnold showed a variety of cut flowers. L. Henderson had his window packed with baskets of cut flowers and plants, very attractive. Hess & Swoboda displayed large bunches of long-stemmed American Beauty roses; potted plants of all descriptions—blue and pink hydrangeas, azaleas, cinerarias, etc.

Hess & Swoboda are finishing a 200x24-foot rose house for early planting.

A. Donaghue is putting in a new large boiler and intends to enlarge his plant this season.

J. J. Hess will leave for Europe June 18.

GRIPPE.

WASHINGTON, D. C.—Easter business this year did not much exceed that of last season; large and expensive plants did not go so well as last Easter. Carnations were very scarce, the poorest realized $1.00 per dozen, the best bringing $[illegible].00. Roses had no great call. All the available bulbous stock was disposed of. Violets were very scarce and of poor quality. Lilies sold readily at $[illegible].00 per dozen, and twice as many were disposed of as last year. A much larger number was grown. Rain began to fall Friday evening and continued until Easter Sunday morning. The [illegible] florists report a good business.

C. W. W.

WATERBURY, CONN.—The amount of Easter business done was almost double that of last year. Plants sold better by far than cut flowers. Carnations were scarce; roses in good crop. Of lilies we had plenty. The largest sales in plants were of lilies; second, bulbous stock, which went well. Large quantities of daffodils, tulips and hyacinths were disposed of. Azaleas sold well also; Crimson Rambler roses fairly well. There were very few violets; pansies took their place to some extent. Hydrangeas go slow here.

A. DALLAS.

WINDOW DISPLAY OF THOS. YOUNG, JR., FIFTH AVENUE, NEW YORK.

ROCHESTER, N. Y.—Never have the florists here had so good an Easter trade as this year. They anticipated a large demand and were prepared for it. H. E. Wilson said, in spite of the fact that he had twenty-three clerks at work, men and women would come in and take the flowers away without even waiting for them to be tied up. He ran out of cut stock. Carnations sold at $1.50; roses, $2.00 to $3.00; American Beauty, $8.00 to $12.00, and Ulrich Brunner at $6.00. Violets brought $2.00 and the supply was far too short.

J. B. Keller's Sons had an immense sale of hydrangeas and an extra demand for violets. They sold carnations at $1.00 to $1.25; roses at $2.50 and up, and American Beauty at $7.00 to $10.00. They are looking forward to the best May and June trade they ever had.

E. R. Fry Florist Company had an annex and sold almost everything in both stores after replenishing the stock from the greenhouses half a dozen times. The sale of lilies led, with a spirited demand for azaleas, and pans of half a dozen hyacinths at $1.50. American Beauty roses sold in larger quantities than usual at $10.00.

Salter Bros. sold over fifty thousand violets at $2.00 a hundred and could have sold more if it had been possible to get them. The only really new thing was the blue hydrangea that sold at $4.00, and every plant was disposed of. Heaths and deutzias in pots sold in larger quantities than usual; also American Beauty roses, which readily brought $10.000.

C. P. W.

AUBURN, N. Y.—Everything sold out for Easter, the demand exceeding the supply. The call for potted plants was extensive, azaleas being the most popular. Our florists did better this Easter than ever before. John A. Kraus reports business beyond his expectations. He has just installed a handsome refrigerator made of tile and plate glass. He reports an amusing incident which occurred Saturday. One of the florists, having a surplus of plants, placed them on sale in a drug store window, and the opportunity was seized upon by Mr. Kraus, who purchased the plants at retail prices. They brought double at his own store. Roses were sold at $2.00 and up; carnations, 75c. and up; violets, $2.00 a hundred; Harrisii lilies, 20c. per bloom; callas, $2.50 a dozen; daffodils, 75c. a dozen; tulips, same price. J. A. K.

ALBANY, N. Y.—The Easter business this year was characterized by great activity and universal demand. The business was too great to be handled to the best advantage. Stocks of plants in the various stores were in great profusion, but all customers could not be properly taken care of, as so many do not look to buy until Saturday. Azaleas and Crimson Rambler roses were about the best selling plants among the higher priced ones. Hyacinths and tulips, for the cheaper plants, were most in evidence. Carnations in cut flowers were scarce; many more thousands could have been sold if good flowers could have been procured when the demand came. Everyone did well and everyone is satisfied.

W. BROS.

COLUMBUS, O.—Our trade during Easter week was larger than in former years. Plants in general sold well. Lilies were very scarce and we were sold out two days before Easter. There were nothing new in the flower line this season, but plenty of good stock, both in cut flowers and plants. Prices were lower on the average than in former years, but the increased demand made up the shortage. We were fortunate in having all our own stock, thus putting us in fine shape to meet all demands.

THE LIVINGSTON SEED CO.

LOUISVILLE, KY.—Local reports show that Easter trade equalled last year's in volume—perhaps a little better. The demand for good plants was excellent. Bulbous stock was not very satisfactory; what came into the market was so far advanced as hardly to hold until Easter day. Such growers as disposed of their entire supplies of bulbous stock were fortunate. Some good hydrangea plants were shown by several dealers. In cut flowers, lilies were in greatest demand, with roses and carnations following closely. The call for violets was very good, but as the supply was nil, the demand cannot be counted.

Prices realized were about the same as last year, except on lilies, on which the figure was advanced. The weather conditions for the proper handling of Easter trade were bad. It rained Friday afternoon and Saturday morning, and again Sunday afternoon. A. R. B

NORFOLK, VA.—Easter trade here was very brisk. The changeable weather before Easter caused lots of trouble. Some of the bulbous stock, such as hyacinths, was too long in the stems. The prices were 5 per cent. higher than those of last year. Some of the finest displays were shown by Lloyd Blick and Auman. These gentlemen had very fine lilies, hydrangeas, as well as roses and carnations. In general, there was the same common stock on market that one could have got in New York and Philadelphia more than fifteen years ago.

OBSERVER

BIRMINGHAM, ALA.—Easter weather was ideal. Extra early Spring brought out large quantities of hardy flowers—snowballs, wiegelias, spiræas, violets, dogwood, and wild honeysuckle. But for this, the supply of cut bloom would have been far short of the demand. As it was, carnations led in the race for public favor. Harrisii lilies were short in supply. Prices ranged about the same as last year, and total sales about 25 per cent. more. All here claim the best Easter trade ever experienced. LINDSAY.

KNOXVILLE, TENN.—Easter trade was at least 25 per cent. better than last year's. The best selling stocks were carnations of all colors, American Beauty, Bride and Bridesmaid roses, Lilium Harrisii, lily of the valley, hyacinths, jonquils, etc. In plants, lilies, azaleas and spiræas sold well. Prices were firmer and the supply plentiful.

C. W. CROUCH.

TOPEKA, KAN.—Trade was about ten per cent better than for last Easter. Lilies went rather slow, prices being higher. Carnations sold best in cut flowers at $1.50 per dozen. Potted plants, such as hyacinths and other small plants, went well. JAS HAYES.

THE LATE ARCHIBALD F. BARRON.

(See Obituary, p. 455.)

JACKSONVILLE, FLA.—The volume of our Easter business was about the same as last year's, but under last year's conditions would have greatly exceeded it. This year Easter came so much later; then we had an unusually mild Winter and outdoor flowers were abundant, consequently a great many people who last year had to buy of the florist made out with what they had in their yards or could get from their neighbors. Such being the case, we feel very much gratified with our sales. We had no novelties, but sold largely in potted plants, azaleas, hydrangeas, callas, L. Harrisii, double petunias, of which we had a fine lot, well grown in 6-inch pots, and geraniums. In cut flowers, carnations, callas and Harrisii lilies were most in demand. We are pleased to note a great improvement in the appreciation of, and demand for, nice flowers and plants for Easter, and considering the quantities of outdoor-grown, common flowers usually to be had in greater or less supply, owing to the season, we think the florists have little to complain of as regards Easter business. C. D. MILLS.

READING, PA.—Everybody reports a good Easter trade, selling out clean, plants being most in demand. Prices were about the same as last year's, except for lilies, which this year brought 15c. and 20c. The department stores here are hurting legitimate trade; they sold lilies at 10c. and 12c.; azaleas and hydrangeas at 49c., and other stock in proportion, at wholesale prices. No novelties were in evidence. IRVING H. ANDERSON.

Canadian News

TORONTO.—Easter, 1903, has kept up the standard of the regular increase in the florists' business here. There appeared early in the week to be a scarcity of some lines of stock, but an immense quantity was brought into the city and sold. The retailers all agree that they handled more stock than ever before. All, or nearly all, of the principal stores of the city in every line of business appeared to be using plants or cut flowers for decoration; and on Saturday in the florists' stores there was an immense quantity of both plants and cut flowers. Lilies, both Harrisii and longiflorum, were to be seen everywhere, and they sold at about all prices, from 6c. to 35c. per bloom. The good stores getting the big prices were about sold out, while several of the others had still some on hand. Azaleas were the next favorite plants; a great many of these were disposed of and generally at good prices. Rhododendrons were offered in limited quantities, but did not sell very well. Hydrangeas were a better article for the public, but the plants were not all sold. Genistas were also offered, but are too well known to find much favor with buyers. Spiræas were not so plentiful as in former years, and most of those offered sold fairly well. Some good H. P. roses were offered and generally sold well. C. Tidy had some very nice ericas, but they were high in price and did not clean up. Quite a number of small palms were sold; and there were not enough good small ferns to supply the demand. Pans of hyacinths, narcissus, lily of the valley and tulips all sold fairly well. Quite a few lilacs were offered, but did not go well. Cinerarias, primulas, mignonette and wallflowers were in smaller quantities than usual; geraniums were not seen at all. Only a few Crimson Rambler roses and bougainvilleas were in; also a few orchids. Tidy had in his window a fine specimen of Laelia purpurata with about thirty flowers on it. Dunlop had a fine specimen of Cymbidium Lowii with fine sprays, and Hill had a fine piece of Cattleya Trianæ. Calla lilies were not plentiful, and there was not much call for them.

MONTREAL. The florists have no cause for complaint as regards Easter trade, on the contrary, all the storemen report having sold out all their stocks. The remnants consist of poorly-flowered plants, or bulbs in pots. The buyers' taste was invariably for plants, and choice well-grown stock sold on sight. There were just about enough lilies to go around, those Montreal-grown being far ahead of the Western plants. Real good spiraeas sold well; Crimson Rambler roses fairly well. There was a brisk demand for bulbs in pots. Hybrid roses, when done well, sold splendidly; also hydrangeas. There was no call for lanky stock of any kind; the public know a good plant and will not have any others.

Roses, carnations, daffodils, tulips, lily of the valley and mignonette were cleaned up completely, especially carnations, these latter selling at a good price.

The weather was grand for delivering, and there were no complaints in this respect. It was noticed, however, that one or two florists delivered their lilies packed pot to pot in their wagons, which means that a good many people received bruised and battered flowers, which certainly cannot be very good for trade.

Wilshire Bros. handled a very fine stock of pot plants and cut flowers, and report largely increased sales over last year. Joseph Bennett had the finest lilies and Crimson Rambler roses, and he reports a splendid trade all around. C. Campbell carried an immense stock and reports good business.

Prices per 100 were: Roses, American Beauty, $10.00 to $30.00; Liberty, $6.00 to $15.00; Bridesmaid, $4.00 to $10.00; Bride, $4.00 to $10.00; Meteor, $4.00 to $10.00; Sunset, $3.00 to $8.00; carnations, $2.00 to $5.00; lily of the valley, $1.00 to $3.00. Violets were out of the market. Daffodils brought $2.00 to $3.00; callas, $8.00 to $12.50; longiflorum lilies, $8.00 to $10.00; Asparagus plumosis, 75c. per string. W. C. H.

FREDERICTON, N. B.—We had all the Easter business we could attend to, shipping many orders for plants and cut flowers, some as far away as Quebec. Azaleas sold best in plants. In cut flowers roses brought $2.00 to $3.00; carnations, 50c. to $1.00 per dozen; lily of the valley, $4.00 per 100; violets, $2.00. The weather was favorable, conducing to the best Easter business we have experienced.

Hamilton.

Club Meeting.

The club will meet on Tuesday, 21st inst. Arrangements are making to have Roderick Cameron, of the Queen Victoria Park, Niagara Falls, address the meeting upon the subject of perennials. It is sure to be of great interest, as Mr. Cameron is an authority on the subject. It is intended to invite the members of the Horticultural Society, and a full house is expected.

The American Carnation | How To Grow It

A Standard Work Written by Request of the Publishers of the Florists' Exchange.

By C. W. WARD

THE CARNATION in America has reached a status and importance in the florist's industry possessed by no other flower of modern times, and a practical work on the subject of the cultivation of the plant has become an urgent necessity. This want is fully and completely met in the present volume, which furnishes the results of years of actual experience of the author, who is recognized as being among the foremost of carnationists in America. The scope of the book will be gleaned from the subjoined table of contents:

History and Development of the Carnation—The Carnation in America—The Commercial Importance of the Carnation Industry—The American Carnation Society—Use of Carnations as a Decorative Flower—General Greenhouse Culture—Soils—Manure and Fertilizers—Propagation and Shipping of Young Stock—Treatment of Young Stock preparatory to Planting Out—Field Culture—Lifting and Planting Carnations from the Field—Treatment after Benching—Picking, Packing and Shipping Carnation Flowers—Insects and Preventives—Diseases and Injuries—Packing and Shipping Field-grown Plants—Forcing Houses for Carnations—Bench Construction—Sub-irrigation—Heating Carnation Houses—Carnations for Summer blooming—Bedding and Hardy Carnations—Carnations for Pot Culture—Raising Carnations from Seed—Cross breeding and Fertilizing—Varieties—Sports and Variations—The Ideal Carnation—Traits and Peculiarities—Various Classifications of the Carnation—List of Varieties for Different Localities—The Future of the Carnation—Its Commercial aspect and Prices—Who shall engage in Carnation Growing—Does it Pay to do things Well—Calendar of Operations—Carnations in California, Canada, in the West, the East, the South.

It will at once be seen that a work of this nature should be in the hands of every florist and others interested in the subject who desire to keep abreast of the times, and to make the growing of carnations, by the most modern methods, a profitable part of their business.

The Book is profusely illustrated by original engravings from life made specially for this work, with four colored plates. Handsomely printed from large, clear type on fine enameled paper. Quarto, cloth. Price, $3.50.

Adiantum Hybridum

Finest of its class for either cutting purposes or as a pot plant. (See illustration in Florists' Exchange, April 4, page 406.) Grows freely in hottest weather when Adiantum Cuneatum goes off. Fronds are large, averaging 18 inches to 2 feet, produced abundantly, and realize double price at least of ordinary Maiden-Hair Fern. It produces no spores, being a hybrid, raised by J. H. Ley, between Adiantum Decorum and Adiantum Amabile.

SEE WHAT FLORISTS SAY:

Your Adiantum Hybridum which I had from you two seasons ago has proved a money maker. Having increased my facilities for growing same kindly book me one thousand more.

JAMES MACFARLAND,
Staatsburg-on-Hudson, N.Y.

I have been using your new Adiantum a good deal. The fronds are very much liked by my patrons. As a pot plant I consider it one of the best.

Z. D. BLACKISTONE

Your Adiantum Hybridum is a great improvement on other varieties. Fronds are very fine for cut uses.

GEORGE C. SHAFFER.

Your new fern Adiantum Hybridum is the grandest fern for cut sprays I ever handled, demand far greater than supply. It stands better, lasts longer, and sells better than any other fern on the market to-day.

F. H. KRAMER,
Anacostia, D.C.

I consider the most valuable point about your Adiantum Hybridum, is that it will grow splendidly during the hot weather, which Adiantum Cuneatum will not do. Its lasting qualities are also far superior. For a pot plant it is really grand.

P. H. MEHAN,
Grower for F. H. Kramer, Anacostia, D.C.

Stock has been very limited, but have now a few thousand elegant young plants to offer as below:

2½ inch pots, good . . . per 100, $15.00 4½ inch pots, extra strong, per 100, $35.00
3½ " " strong . . " 20.00 12 2¼ size mailed with balls of roots, $2.

New York Florists' Club.

A very gratifying post-Easter attendance graced the inaugural meeting in the new club rooms, which certainly are first-class in every respect. They are located in the Grand Opera House building, corner of Twenty-third street and Eighth avenue, easily accessible from all ferries and railroad stations.

Not much business was before the club. The committee on donating prizes for the forthcoming show of the Chrysanthemum Society of America recommended that the club offer as premiums, to be competed for by members of this club only in a class for best 25 blooms, in five varieties, five blooms of each, on stems not less than 24 inches long, $25.00, $15.00, and $10.00. The recommendation was adopted.

An appropriation of $200 was voted to cover all indebtedness in connection with prizes at the late show. Mr. May made a donation of $50.00 to the Guarantee Fund, receiving the thanks of the club therefor.

The death of James W. Withers, of American Gardening, having been reported, President Troy appointed Messrs. De La Mare, Wallace, and O'Mara as a committee to draw up suitable resolutions of condolence to be sent to the bereaved family.

Mr. Wallace gave a brief account of the work of the Executive Committee at Milwaukee last month and referred to the great enthusiasm prevailing throughout the entire West relative to the coming S. A. F. convention. He spoke of the hospitality of the Chicago and Milwaukee brethren, and predicted the largest trade exhibit and meeting in the history of the S. A. F., for which the Exposition Building provided ample accommodation. The bowling feature, and the elegant equipment in the Cream City for a large contest, were also touched upon.

The president appointed as a committee on transportation to Milwaukee, Messrs. May, Sheridan, and Butterfield. Mr. May spoke of the desire of the Detroit delegation to have the Eastern members join them at their home city and travel via Bay City, then across the lake to Milwaukee—a route that received the endorsement of several of the members present. It is believed that the Western delegates may also elect to travel by water from Chicago to the convention city.

A few blooms of a rose named variously No. 19 and Mrs. Westinghouse were on exhibition. It was stated that a belief was prevalent that the variety was Killarney, but no corroboration of this was forthcoming at the meeting.

Joseph Millang, manager of the New York Cut Flower Co., was proposed for membership.

Providence, R. I.

Easter Echoes.

Business aggregated much larger than Easter, 1902.

T. J. Johnston heavily stocked up on budded azaleas and hired the adjoining store to accommodate his display.

Keller made a tasteful display, shown to good effect.

Messrs. O'Connor and Kelly handled big crowds at their greenhouses on the previous Sunday.

Macnair had a heavy display of pot stock and made splendid preparations for the crowds; but he is handicapped for show room.

Crawshaw did a wholesale business on potted bulbs. His lilies were well grown.

A visit among the trade after the rush showed the usual haggard looks and nervousness and prompts me to say that the game is not worth the effort put forth at present profits.

It might be well for us to look into the matter of lightening the worry at least and finding means to adjust the profits according to the extra labor.

C. S. MACNAIR.

Cleveland.

News Jottings.

Last Saturday night, while returning home from market, the wagon belonging to Caspar Aul was struck by a street car and badly smashed. Both Mr. Aul and the driver were thrown out, the former receiving injuries which will confine him to his bed for a few weeks. The horse escaped unhurt.

H. Perry Brush, the scientific ventilator man, was a recent caller, and from reports some greenhouses in this vicinity will be equipped with automatic ventilators next season.

Harry Van Koolbergen was also a visitor and no doubt will be the last Holland salesman for the season, much to the joy of the greenhouse man.

Smith, of Wade Park avenue, had a house of their seedling carnation Magdalene in full crop for Easter, and realized some fancy prices for them.

G. W. S.

Newport, R. I.

I recently visited Mr. J. Allen's place at Caswell's greenhouses, and found everything in first-class, up-to-date order. One house, 200 feet, planted with carnations, looked exceptionally good; also a house of Bride and Bridesmaid roses. He plants 15,000 carnations, mostly Daybreak and Mrs. Lawson. His best white is Queen Louise, which was looking fine; in red, Jahn's Scarlet does best. A bench of Melba was extra good.

This firm also grows a large quantity of grapes, mostly Muscats and Hamburgh.

Nursery work in town is brisk. Mr. Vanicek has thirty large cases of stock arriving from Belgium this week.

Fred Smythe, of Wadley & Smythe, and a host of helpers are in town decorating "Arleigh," the home of Miss Neilson, for the Vanderbilt-Neilson wedding. Two car-loads of flowers have been shipped on from New York, to say nothing of plants. T. F.

y plants, from Fall-sown seed, of the shortages reported by who grow them extensively. Ger- s will be in the usual supply. the sure prospect of there being er demand for them this year St. Louis has ever experienced, rs will lose an opportunity of to their profits if they do not p the price or increase it over f former years. The trouble is l not agree to do it, and many have to suffer for the faults of a few who sell at any figure as long as there is some profit, and ready cash coming in. F. W. M.

Grand Rapids, Mich.

A Cloud-Burst.

A lightning and rain storm struck this district on Saturday afternoon last, doing considerable damage to greenhouses in its path. The establishment of Peter Kunst suffered to the extent of $25; that of Cunningham, $50; Crabb & Hunter, $100; others slightly. The basement of the Brown's seed store was flooded, and seeds, onion sets, potatoes, etc. were damaged to the extent of $500.

The next meeting of the club will be held at the Board of Trade rooms on Friday, April 24. G. F. C.

Lockport, N. Y.

The Easter trade here was reported as ahead of common, with the supply of lilies quite short of the demand, and called for almost down to close buds.

Fred G. Lewis, of the younger generation of this name in Niagara County horticulture, recently purchased the former F. B. Lewis property. The former houses located thereon were repaired, and a new house added. Carnations form the specialty here.

VIDI.

Woonsocket, R. I.

The Summit Greenhouses will add about 1,600 square feet of glass to grow chrysanthemums for the Fall trade. Work on the addition will start at once and will probably be finished by the first of June. T. H. G.

S. Jacobs & Sons, Greenhouse Builders.

Recently we had the privilege of going through the factory of S. Jacobs & Sons, manufacturers of greenhouse material, 1365-1373 Flushing avenue, Brooklyn, N. Y. It is somewhat out of our line to give a detailed account of the machinery necessary to prepare sash bars, eave plates, ridge boards, etc., from the raw material, and we can only say that with its extensive and well equipped factory the firm of S. Jacobs & Sons is in a position to turn out any and all kinds of greenhouse structural material at the shortest possible notice.

The firm furnishes everything needed in the greenhouse construction line, and sends out men to erect and equip with heating and ventilating apparatus when so desired. The concern confines itself to no particular style of sash-bar, but makes any kind of bar desired. All the putty used is manufactured on the premises, and nothing but the best material is employed in its manufacture. The boiler this firm uses is manufactured for it by a well-known concern in Reading, Pa., and is guaranteed in every particular. All the wood used for sash-bars, etc., is of natural cured red gulf cypress from Louisiana, which is considered the best that money can buy for greenhouse construction.

The firm, issues a neat catalogue which can be had on application.

Jottings About Town.

James Fraser had a good cut of carnations just ready for the Easter business, as also some good longiflorum lilies. His new houses have been a great success.

Van Bochove & Bro. had some 5,000 lilies ready for the market, and they sold clean out. Roses and carnations were also in good crop with them. The brothers are already at work on their new block of houses which, I understand, are to be built on the short roof principle. Their plant is now assuming large proportions, close to the 100,000-foot mark.

Dunkley Floral Co. reports a good season also. Carnations have done well again this year. The firm had a large supply of pot plants, etc., for the Easter trade, and feel satisfied with the business done.

Since moving into its new store on Main street, the Central Michigan Nursery Co. has done a most satisfactory business and is pleased with the results. The concern carried a large supply of stock for Easter, prominent among which were a number of Crimson Rambler roses, eight feet high, well proportioned and in full bloom, which made splendid specimens. The plants were forced at the firm's greenhouses and, I understand, fetched the neat sum of $15.00 each. The company is already at work on the new addition of 12,000 feet of glass and expects to have the houses ready for early planting.

John Calder finds business improving right along, although he has experienced some hard luck the past season. We hope his luck will change this year.

Fred Marker is getting ready to make his addition as soon as weather permits. He is well located, and business increases with him all the time.

The writer had a nice cut for Easter, also. S. B.

West Seneca, N. Y.

HARRISII BULBS

For August Delivery

Good straight stock of Harrisii are not plenty. We have the sale of as large a supply of carefully grown and well rogued stock as can be found on the Island of Bermuda. There is no more profitable forcing bulb in the whole list than true Harrisii. Place your orders with us now and you will get the best bulbs produced this year.

Our arrangements for high grade bulbs of French Romans, Paper White Grandiflora, Callas, Japan Longiflorum, London Market Valley and picked bulbs of all **Dutch Hyacinths, Tulips, Narcissus and Spiraea** are unexcelled.

Bulbs secured from us will be subject to careful inspection and approval on arrival, and if in any way unsatisfactory, will be made good at once.

By combining your order for a full line of this stock with us, you get each in season and all at the closest cost for high grade stock. Economy in carload freight shipments and large importations supply half our profits.

Write for prices before closing any forcing stock order.

SEED TRADE REPORT

AMERICAN SEED TRADE ASSOCIATION

Walter P. Stokes, Philadelphia, President; C. N. Page, Des Moines, Iowa, Vice-President; C. S. Burge, Toledo, Ohio, Second Vice-President; S. F. Willard, Wethersfield, Conn., Secretary and Treasurer; A. N. Clark, Milford, Conn., Assistant Secretary.

The estimated yield of beans for the entire State of Michigan in 1902 is put at 68 per cent. of an average crop.

PEORIA, ILL.—The Louis Stocker Seed Company was a heavy loser through a fire which occurred here on April 18.

DETROIT, MICH.—The American Seed Company has filed articles of association; capital stock, $25,000, with $15,000 paid in. The incorporators are: Joseph L. Gillespie, Chas. W. Latham, John Burgen. Joseph L. Gillespie, trustee.

European Notes.

Trade has been a little brisker this week, and it seemed as if better times had commenced; but a succession of cold winds has put a very effectual stop both to business and to forward growth outdoors. In consequence, there have been several rather discouraging reports from the growing centers, but at present it is too early to estimate what damage can have been done to the early crops.

EUROPEAN SEEDS.

HOLLAND BULB CROPS.—Bulb fields are now at their best so far as hyacinths are concerned, and it is worth noting that this has not happened for the last twelve years that hyacinths should be in their full glory on the first of April. At the same time it is quite certain that the crop of hyacinths will not be more than one-half the quantity that was in the market last year, provided that no more disasters turn up before harvesting time comes round; and there is planty of time yet for all sorts of mishaps that Nature is sometimes willing to provide. Very likely the week after Easter will find the bulk of the tulips in full bloom, which is fully two weeks earlier than last year, and it must be said that so far they are looking exceedingly fine and healthy.

As all the bulb fields have now been uncovered, it appears that many more bulbs in the grounds have been killed outright by the early frost, and among these are the English iris, in the first place of which nearly all the stocks have been destroyed. The Iris hispanica have also suffered badly in many places, thus leveling by a single stroke the overstock that was in the market last year. Ixias have also suffered seriously; and of the narcissi, both the double and single jonquil stocks have been diminished to such extent that not one-half the usual quantity of salable bulbs can be expected in the markets this season, and this peculiar state of affairs of bulb crops generally will no doubt cause, during the coming season, some awkward surprises for the dealers.—Horticultural Trade Journal.

DORMANT ROSES

Two-year, field-grown, strictly first-class, mostly own roots. I offer, subject to sale, at these prices. No bundles will be broken.

Nursery Department

MERICAN ASSOCIATION OF NURSERYMEN
Charles A. Ilgenfritz, Monroe, Mich., President
S. Lake, Shenandoah, Ia., Vice-President.
orge C. Seager, Rochester, N. Y., Secretary;
L. Yates, Rochester, N. Y., Treasurer.

Nursery Notes.

If you are in the way of receiving ıstom in Summer, do not let the sea- n pass without potting vines, ever- eens, and shrubs that can be sold ter the planting season is over for ock in the open ground.

The Douglas spruce, from the Rock- s, is destined to become a most pop- ar evergreen. Hardy, beautiful, and rapid growth, it also transplants ıstly, which cannot be said of all ever- eens.

Watch closely for San Jose scale at ıis season, especially among bought in ees. The insect is widespread, and is worth a good deal to a nursery- ıan to be able to guarantee his stock ee from it.

Sambucus pubens is in flower now. here is no great attraction in its flow- s, but the red berries are attractive, nd they quickly follow the flowers. It ell deserves its common name, "red- rried elder."

Apple trees branched almost to the round, so popular in the West, are ıt favored by our fruit growers, and urserymen will find a better sale for ıose partly trimmed.

It is uncommonly hard to transplant ıe sour gum, Nyssa multiflora, even hen in small sizes. Prune them in ery close, to have a chance of their ving.

Magnolia Lennei.

Probably it is because that Magnolia ennei is scarce in most all nurseries ıat specimens of it are rarely met with n private estates. By those who pos- ss it, it is prized as one of the most orthy of the whole class of early flow- ing sorts. This is not saying that in s display of flowers it is more worthy, ut it is a week or two later in bloom- ıg than M. conspicua and M. Soulan- eana, the two well known Spring- looming sorts, and this difference of me in flowering usually insures the erfecting of the flowers without hin- rance from late frosts. The flowers re purplish red, large and cup-shaped. n growth this variety makes a heavy yle of twigs and has perhaps fewer f them than the others mentioned.

Occasionally this one, M. Soulange- na, M. Alexandrina, and others bear ed pods, and many seedlings may re- ılt from them. As they are all vari- ies and not species, the seedlings are ırely just like the parents, but often ery nearly so, and invariably as good a way as the parent from which they pring.

The most satisfactory way to increase ıis class of magnolia is by layers. Set ıt plants especially for this purpose. nrich the ground well, and cut down ıe plants almost to the ground. This ill result in a lot of young, strong, ngthy shoots, just the kind for layer- ıg. As soon as the shoots have made ngth sufficient, layer them. Repeated yering of the top weakens a plant, nd the practice is to let the plants row at will every other year, to keep p their vigor.

Pyrus Japonica Varieties.

That fine old shrub, Pyrus japonica, ıay be found in almost every garden ı the land, so much is it esteemed for s handsome scarlet flowers in early pring. As transplanting is now going ı, affording the opportunity of getting ıany root cuttings, I would refer to me of the many worthy varieties of ıis bush. All of those I shall name re as worthy a place as the old type, . japonica. Before me as I write, in vase on the table, are four distinct rts. They are Maulei, brick red; car- inalis, light red; rosea alba, light pink; nd nivalis, white. As they appear, lending one with the other, the com- ination is exceedingly pleasing. The hought occurs, what a lovely group ıch plants would form, the color prop- ly arranged, and the common scarlet ıe being added. It is getting late for ansplanting with us, as the pyrus does ot move well when advanced in leaf, nless severely pruned. It will be bet- r to make a note of it for Fall plant- ıg. Transplanting is not a risk then. s at any time when dormant the work may be done safely.

Mentioning root cuttings, as I have done, this is the usual source from which young plants are obtained. The Fall or Winter season is the best time to cut roots from the parent plants. These are cut into lengths of about three inches, kept in a cellar until Spring, and then planted out in rows, set deep enough that the tops are about level with the ground. Almost every root should make a plant.

Evergreen Seedlings.

Referring to the decision of the Board of General Appraisers at New York that a seedling, though transplanted, is still a seedling for the purpose of appraisement, the decision is not in accord with what is commonly understood as a seedling by the nursery trade; however, it may agree with the spirit of the law to call the plants such for the levying of duties. Following the nurseryman's ideas of a seedling, it applies altogether to such as have not been transplanted. For example, take the following as an illustration: "Betula lenta, sweet birch, 1 to 2 ft. seedlings." Everyone in the trade would understand that referred to stock not transplanted. But, though transplanted, in many catalogues the name "seedling" is still used, notwithstanding the stock is transplanted. But the use is for the guidance of the purchaser, that he may know the stock has originated as seedlings, and not as layers or cuttings. And in this case, if transplanted, the catalogue reads, "1 to 2 ft. trans. seedlings." In other words, stock offered as "seedlings," with no explanation, is understood to mean not transplanted. I do not know of any law for this, but it is certainly how the case stands with those in the trade. When transplanted, nurserymen are interested to so explain, as the stock is more valuable. The use of the word "seedlings" is as explained, to show the derivation of the plants, seedlings being preferred to layers or cuttings by some buyers.

While on the subject of catalogues, how much more necessary information is conveyed in ours than is to be found in those of Europe! Ours usually give the age and size of stock, and whether seedlings or cuttings. How often has it vexed me when looking over foreign lists to find after each item "1 year," "2 year," "3 year," and other ages, with not a word about the most important matter of all—the height. The American wants to know the height first of all; the age is secondary with him. Some of the English and French lists are very tantalizing in this way, and I am confident many an order has failed of being sent across the water because of this defect.

Colorado Blue Spruce.

As this is the season when nurserymen are consulted as to the best evergreen to plant, it is well to keep in mind the desirability of those from Colorado. Not only are they hardy anywhere from Colorado to the Atlantic States, but many of them are of extreme beauty. The gem of the whole of them would be the blue spruce, were the favorite to be decided by vote. There is really no other evergreen of like character. Hardy, robust, symmetrical of growth, and, in the best types, of a lovely blue, it exceeds in beauty any other evergreen. When of a height of from six to twenty feet, a specimen of it is an uncommon attraction on a lawn. And to add to its good points is but to say that it is ranked as being not hard to transplant.

There is a great difference in the depth of blue in this species. The color varies from that of the green of the Norway spruce to a deep blue. Many propagators have selected a very deep blue one and propagated from it, and in this way we get Koster's blue, Meehan's blue, Waterer's blue, etc.—all presumed to be of unusual excellence of color. There are seasons of the year when the color of all is more intense than at others. In Spring it is good, lasting through the Summer.

There need be no hesitation in planting this spruce in any position, no matter how exposed. It will stand it. This is a good season to set the tree, and with ordinary care it will grow. All the spruce family have a good share of roots. If these are kept fresh and planting be not delayed, the percentage of loss in transplanting will be small. The blue sorts are propagated by grafting, chiefly, though when raised from seed a large number of good blue ones may be selected from a bed of seedlings.

This is the season to sow the seeds. Sow outdoors, or in frames. Have the soil made smooth, and cover the seeds lightly, shading the beds slightly until the seedlings appear, when the shading material should be removed gradually.

JOSEPH MEEHAN.

BRIEFS FOR BUSY FLORISTS.

MEMORIAL DAY.—With the approach of Memorial Day, it is in order for the suburban florist to begin to get his stock in shape for that time. There are very few in the business who do not find an extremely large demand for all kinds of flowering plants for grave ornamentation on that day, and especially is this so where the florist happens to be located near some cemetery. There are many patrons of florists' establishments, however, who seek something more permanent than a few flowering plants for the adornment of their cemetery plots, and it is well to have on hand some of the decorative shrubs in order to meet this demand. It would, of course, be best to have such as are planted in tubs; they are easier to handle, and they could be conveniently stored in some shed, or other outbuilding, through the Winter months. Of the various trees or shrubs that are well adapted for cemeteries we may mention bay trees, aucubas, boxwoods and euonymus in variety, and we feel sure that it would pay well for florists who grow most of their own stock to carry a line of the decorative evergreens mentioned.

HYDRANGEAS that did not get in for Easter time should be placed in the coolest house, so as to hold them over until Memorial Day. They will be in good demand at that time. To have masses of geraniums, also, at that time, it is well to take large-sized pans and fill them with geraniums. Select plants of uniform growth, and preferably of one variety, though a few pans filled with mixed sorts will not fail to please some customers.

ASPARAGUS PLUMOSUS.—If a new bed of asparagus is in contemplation make it a solid bed, and use one-year-old plants for filling.

Among the seeds that should be sown now are those of primulas, Solanum capsicum annuum, nasturtiums and cobeas; also successive sowings of asters, stocks, phlox, etc.

Profit in Gardens.

The profit side of the small garden is worthy of more consideration than it generally receives, writes Edwin C. Powell in Good Housekeeping. The average gardener sums it up after a season's experience by saying that he can buy his vegetables cheaper than he can grow them. An investigation made by the writer some years ago of over fifty city and village gardens, located in various parts of the United States, shows some interesting and valuable figures. These gardens contained on an average about fifteen thousand square feet, or nearly two-fifths of an acre. The average total value of the produce grown, which included vegetables, fruits and flowers, was $61.56. The cost of labor expended in preparing, planting and cultivating the garden, based on prevailing rates for day laborers, amounted to $19.50, seed $8.68, fertilizer and manure $7.12, use of tools $1.70 (which was figured at 10 per cent. their value), and incidental expenses 50 cents, making a total cost of $37.59 and leaving a profit of $23.97. As many of the gardeners bought novelties in the way of vegetable and flower seeds and flowering bulbs and plants, the item for seeds was necessarily somewhat large.

CATALOGUES RECEIVED.

E. H. HUNT, CHICAGO.—Spring Price and Seed List.

PLANT SEED COMPANY, ST. LOUIS.—Trade Price List of Flower Seeds.

W. C. KENNEDY, ST. JOSEPH, MO.—Catalogue of Vegetable, Farm and Flower Seeds. Illustrated.

CARNATIONS

We are passing through what I alays consider the discouraging time of the year for the carnation grower. The reason for this feeling is apparent, for the work which should be done must often be neglected in order to give the young stock the care which is needed to insure good results from it; and the houses are very apt to suffer in consequence. The slump in the Spring of the year can be avoided, if one has plenty of help; but there is always an extra amount of work, and if anything must be neglected it should not be the young stock.

Before these notes get to press a goodly share of our young plants will be in the field, and if we are favored with a shower or two within a few days after planting, the future of the plants is practically assured. The important factor in shifting young stock to the field successfully is a good ball of roots, and I do not believe it wise to put small plants into the field until they have become well established in pots. This, with late propagation, makes it late when the plants get into the field, but they take hold better, and will be far better in the end than stock which was poorly rooted when set out.

Several interesting points have come up in connection with young stock, and the fact that the February struck cuttings are in the best shape is very apparent. If propagated before February a shift to 3-inch pots has been found necessary, and this requires a great deal of space and quite an expenditure of valuable labor. On the contrary, cuttings struck during March are not sufficiently rooted in the pots to send abroad, and these will lose the coming few weeks, which, being cool and with plenty of showers, are very conducive to a good start in the field. If your cuttings are early propagated they should be in the field; if late, give them all the show there is, and have them ready to set out as soon as possible. By getting the young stock into the field early you have a chance to devote your time to your old plants, and if they are in the shape that ours are in they will need all the attention you can give them.

To consider the old stock for a few moments. A heavy mulching is an absolute necessity, for without it the benches dry out too rapidly, and far too much washing of the roots will result in order to keep the benches sufficiently moist. One of the first to show the result of the warm weather and shortage of food is Mrs. E. A. Nelson, G. H. Crane being a close second. In fact, nearly all of the varieties will need an abundance of food if the quality of the bloom is to be maintained. We like to give a dressing of bone meal, or super-phosphate, and on top of that soil and cow manure, and, later, a dressing of ashes to stiffen up the growth, which is apt to be soft during the bright weather succeeding a spell of cloudiness or rain. It will also tend to keep the color of the blooms up to the standard.

In one of my notes I referred to the use of Ivory soap for red spider, but I do not wish to be understood to mean that the spraying of the plants with this solution is an improvement over a good syringing. When you have an infested corner, or a few plants, the solution named will clean out the pest; but in the Spring, with plenty of sun to dry out the plants, they should receive thorough and systematic syringing to keep red spider in check. Perhaps rust will be a result of too much water; but at this season I do not consider rust of any importance, for your propagation is ended and the old stock, during the Spring, seldom suffers from this disease enough to injure the quality of the bloom; while red spider will, if not kept in check, destroy everything. You will find red spider on the buds and around the calyx of the bloom, and the syringing should not be confined to the base of the plants. Syringe thoroughly, and syringe often.

One of the results of heavy syringing is a disarrangement of the plants, and they will need a great deal of attention to keep them within the supports.

This must be attended to, if you wish to keep the stems straight; and the plants should be gone over after each syringing. These points attended to will keep the quality of the blooms up to the standard for some time to come. Working over old plants is not as satisfactory an operation as to handle them when coming into their prime; but a good many dollars will repay the attention, for May and June are the months of big cuts, even though the prices are not high.

I have written very little on the subject of the field for planting out carnations and our method of planting, for the reason that circumstances usually control this feature. We cannot all do as we would like to, but in general let me say, that if you can rotate your crops and use a different field each year you will find it an improvement. Try to have the field well drained-upland, with a friable soil, and add enough fertilizing ingredients to make it able to support the growth the plants should make. We like to use a field which has been cultivated the previous year, because it is then in better mechanical condition, and there is no sod in the process of decomposition. When sod is decomposing there is apt to be stem rot in abundance. This should also be a hint to us as to the quality of the soil used in benching. Avoid half rotten sod. Lay up your compost, if possible, a year in advance and you will find little stem rot from this source. We are planting out this year in a field in which millet was grown last season; and an improvement on this would be to plant in a field which has had a crop of clover, or some nitrogenous gathering plant, plowed under. Nitrogen gathered from the air is obtained very cheaply and the value of the leguminous plants as nitrogen-gatherers is being realized by those who make a study of the fertility of the land. W. R. PIERSON.

A Rochester (N. Y.) Carnation Grower.

A hurried visit to the place of George Bennett, the largest carnation grower around Rochester, N. Y., fills one with envy. He has about 17,000 feet of glass entirely devoted to the growing of many of the best varieties. Quite a space is also given to the cultivation of Marie Louise violet, the monthly cut averaging a good round number. From 15,000 to 18,000 plants of this violet are housed every year, and it is hardly necessary to say that he would put in more if only he had the room.

Here for white carnations may be found Peru, Glacier and Norway in their prime; for pink, Mrs. Frances Joost, Genevieve Lord and The Marquis have an equal share in praise; Red Jacket, General Maceo, Harry Fenn and G. H. Crane are growing in the same house, and at time of writing were looking in fine shape, with stems easily two feet long and buds looking like small pears.

This is the second year for a new variety that, when speaking about, Mr. Bennett holds his head up. "It's got 'em all beat" is his expression, and to look at it, compared with others, one must admit its blooming qualities are away up. It is a sport from Flora Hill; color deep pink, splashed white; stem 22 to 30 inches, erect and strong, differing from its weak-stemmed ancestor. No two flowers are marked alike. The variety is a very early bloomer, leaving no doubt that it can be handled with good satisfaction by the ordinary grower and retailer. No plants of it have as yet been sold, as Mr. Bennett would prefer to dispose of it outright to any party requiring it. The entire output is handled by J. B. Keller Sons, which firm thinks that the new variety is worth disseminating to the trade.

Shading the houses here is quite a job, and is done on the inside, whiting being mixed to the proper proportions and then put on with brush upward toward the ridge. This way is most satisfactory here, because the rains have a tendency to wash off light shading, thus necessitating doing over the work. In Fall the shading is rubbed off with a cloth, when dry, at the same time leaving the inside of the glass perfectly clean.

But with all the carnations on the market, Mr. Bennett claims that none can beat the old Daybreak and Lizzie McGowan, which four or five years ago were in such profusion here as to be one complete mass. In addition to the varieties mentioned, Queen Louise, Prosperity, Flora Hill, Enchantress; in fact, any variety worth trying is found in small quantities. Two houses are being extended 50 feet each this Spring, and larger boilers and a new tank are being installed in order that the proprietor may be able to help supply the ever-increasing demand. A. H. S.

A Large Rhode Island Greenhouse.

The J. A. Budlong & Son Co. have three greenhouses such as illustrated by the accompanying cut. These are located near their large pickle works at Auburn, R. I. The houses are used for carnations exclusively. They are built of the modern iron frame construction, which is covered with cypress capping, glazed with both French and American glass. The houses are fitted with wooden benches and with Lord & Burnham Company's self-oiling ventilating apparatus operating the ridge sash and with their standard apparatus for the side sash.

Greenhouses of the above mentioned length are exceedingly rare, the only others of the same size in the East being the two rose houses put up by the same firm of builders for the Waban Rose Conservatories at Natick, Mass., and a house 850 feet by over 50 feet wide which W. H. Elliott, of Brighton, Mass., built last year at his new place in New Hampshire. At the time of the building of the houses at Natick the question of successfully heating the same was discussed through the trade papers, and it was considered an experiment. The J. A. Budlong & Son Co. had their own men install the steam-heating apparatus according to plans furnished by Lord & Burnham Co., and they report satisfactory results.

Gold Medal

Another Honor for

PANDANUS SANDERI

Above is a fac-simile of cablegram announcing the award of a **GOLD MEDAL** to the **NEW GOLDEN PANDANUS** (Pandanus Sanderi) at the **Great Quinquennial Show, Ghent, Belgium.** This is the most important exhibition of plants in the world, and is visited by all leading horticulturists in Europe. Previous to the above mentioned award, the following honors had been given this new plant:

First-class Certificate by the Royal Horticultural Society of Great Britain, the highest distinction that can be given, and one that is rarely awarded.

Gold Medal. Paris Exposition, 1900.

Silver Medal (highest award). Pennsylvania Horticultural Society, March, 1901.

Silver Medal (highest award). Pennsylvania Horticultural Society, Nov., 1901.

Silver Cup (highest award). American Rose Society, N. Y., 1901.

Gold Medal (highest award). All-American Show, Kansas City, 1902.

Silver Medal (highest award). Chrysanthemum Show, N. Y., 1902.

Silver Medal, Massachusetts Horticultural Society, March, 1903.

A Denominational Garden.

"This here is a denominational garden, an' I got every congregation I ever heard of planted in it. I ain't got no faverite hed. I keer fer 'em all jes' alike. When you come to think of it, the same rule holds good in startin' a garden as does in startin' a church. You first got to steddy what sort of soil you're goin' to work with, then you have to sum up all the things you have to fight ag'inst. Next you choose what flowers are goin' to hold the best places. That's a mighty important question in churches, too, ain't it? Then you go to plantin', the thicker the better, fer in both you got to allow for a mighty fallin' off. After that you must take good keer of what you got, an' be sure to plant somethin' new each year. Once in a while some of the old growths has to be thinned out, and the new upstarts an' suckers has to be pulled up. Now, if you'll come out here I'll show you round."

She started down the path, and Lovey Mary, somewhat overwhelmed by this oration, followed obediently.

"These here are the Baptists," said Miss Viny, waving her hand toward a bed of heliotrope and flags. "They want lots of water; like to be wet clean through. They sorter set off to theyselves an' tend to their own business; don't keer much 'bout minglin' with the other flowers."

Lovey Mary did not understand very clearly what Miss Viny was talking about, but she was glad to follow her in the winding paths where new beauties were waiting at every turn.

"These is geraniums, ain't they? One of the girls had one, once, in a flowerpot when she was sick."

"Yes," said Miss Viny, "they're Methodist. They fall from grace an' has to be revived; they like lots of encouragement in the way of sun an' water. These phlox are Methodist, too; no set color, easy to grow, hardy an' vigorous. Pinchin' an' cuttin' back the shoots makes it flower all the better; needs new soil every few years; now, ain't that Methodist down to the ground?"

"Are there any Presbyterians?" asked Lovey Mary, beginning to grasp Miss Viny's meaning.

"Yes, indeed, they are a good, old, reliable bed. Look at all these roses an' tiger lilies an' dahlias; they all knew what they was goin' to be afore they started to grow. They was elected to it, an' they keep on bein' what they started out to be clean to the very end."

Miss Viny crossed the garden, and stopped before a bed of stately lilies and azaleas. "These are 'Piscopals," she explained. "Ain't they tony? Jes' look like they thought their bed was the only one in the garden. Somebody said that a lily didn't have no pore kin among the flowers. It ain't no wonder they 'most die of dignity. They're like the 'Piscopals in more ways 'n one; both hates to be disturbed, both likes some shade, an' "—confidentially—"both air pretty pernickety. But, to tell you the truth, ain't nothin' kin touch 'em when it comes to beauty! I think all the other beds is proud of 'em, if you'd come to look into it. Why, look at weddin's an' funerals! Don't all the churches call in the 'Piscopals an' the lilies on both occasions?"

Lovey Mary nodded vaguely.

"An' here," continued Miss Viny, "are the Unitarians. You may be s'prised at me fer havin' 'em in here, 'long with the orthodox churches, but if the sun and the rain don't make no distinction, I don't see what right I got to put 'em on the other side of the fence. These first is sweet william, as rich in bloom as the Unitarian is in good works, a-sowin' theyselves constant, an' every little plant a-puttin' out a flower."

"Ain't there any Catholics?" asked Lovey Mary.

"Don't you see them hollyhawks an' snowballs and laylacs? All of them are Catholics, takin' up lots of room an' needin' the prunin'-knife pretty often, but bringin' cheer and brightness to the whole garden when it needs it most. Yes, I guess you'd have trouble thinkin' of any sect I ain't got planted. Them ferns over in the corner is Quakers. I ain't never seen no Quakers, but they tell me that they don't believe in flowerin' out; that they like coolness an' shade an' quiet, an' are jes' the same the year 'round. These colea plants are the apes; they are all things to all men, take on any color that's round 'em, kin be the worst kind of Baptists or Presbyterians, but if left to theyselves they run back to good-fer-nothin's. This here everlastin' is one of these here Christians that's so busy thinkin' 'bout dyin' that he forgits to live."

Miss Viny chuckled as she crumbled the dry flower in her fingers.

"See how different this is," she said, plucking a sprig of lemon-verbena. "This an' the mint an' the sage an' the lavender is all true Christians; jes' by bein' touched they give out a' influence that makes the whole world a sweeter place to live in. But, after all, they can't all be alike! There's all sorts of Christians; some stands for sunshine, some fer shade; some fer beauty, some fer use; some up high, some down low. There's jes' one thing all the flowers has to unite in fightin' against—that is the canker-worm, Hate. If it once gits in a plant, no matter how good an' strong that plant may be, it eats right down to its heart."

"How do you get it out, Miss Viny?" asked Lovey Mary, earnestly.

"Prayer an' perseverance. If the Christian 'll do his part, God 'll do his'n. You see, I'm tryin' to be to these flowers what God is to his churches. The sun, which answers to the Sperrit, has to shine on 'em all, an' the rain, which answer to God's mercy, has to fall on 'em all. I jes' watch 'em an' plan fer 'em, an' shelter 'em, an' love 'em, an' if they do their part, they're bound to grow."—Extract from "Lovey Mary," by Alice Caldwell Rice.

New York.

News of the Week.

The fourth annual meeting of the Horticultural Society of New York takes place at the New York Botanical Garden in Bronx Park, on Wednesday, May 13. An exhibition will be held, in connection with the meeting, in the Museum building of the Garden. A schedule of premiums has been issued, which includes classes for cut flowers and plants. The usual $50.00 will be awarded for the best horticultural novelty in plant, fruit, flower, or vegetable—that is, anything distinct, and not previously in general cultivation in America. Leonard Barron, 136 Liberty street, is secretary.

Fred'k W. Kelsey, the well-known nurseryman, is being boomed as park commissioner for the Oranges. His candidature is endorsed by some of the best citizens, who call attention to the fact that Mr. Kelsey was the originator of the park plan and author of the Essex county park system; commenting also on the good work done by him previously as a park commissioner, and his valuable offices in park matters ever since.

At the opening of the new Stock Exchange building, which occurred on Wednesday morning last, the handsome floral decorations were executed by Dunne & Co., 54 West 30th street.

Twenty-eighth street was the scene of a bad runaway on Wednesday forenoon. A horse belonging to Alex. Warrendorf got frightened and made a dash through the street, crossed Broadway, and almost reached Fifth avenue before it was stopped. Luckily no one was injured, though the horse received a few cuts and the wagon was damaged somewhat.

Wm. Elliott & Sons' auction rooms are the scenes of much activity these days. The offerings this week have consisted of both flowering and decorative stock, and good prices are the rule all round.

H. Weber, Oakland, Md., spent a few days in town recently on his way home from visiting a daughter who is staying at Yonkers, N. Y.

Wm. R. Smith, of Washington, was also a visitor on Burnsiana matters bent. That national monument to the Scottish poet at the Capitol City is still receiving Mr. Smith's best attention.

C. H. Joosten, importer and dealer in bulbs, seeds, etc., 178 Chambers street, will shortly move to more commodious quarters at 120 West street, New York.

Chas. H. Atkins, until recently engaged on the Twombly estate, Madison, N. J., has now charge of the landscape department of Bobbink & Atkins, Rutherford, N. J.

There will be a meeting of the stockholders of the Cut Flower Exchange on Saturday, May 2, at 9 a.m., in their rooms in the Coogan Building, corner 26th street and Sixth avenue.

Dr. N. L. Britton, Director of the Botanical Garden, has returned from an exploring trip in Cuba. He believes the agriculture and horticulture of the island could be much improved and helped by the establishment there of an experiment station. Several valuable plants were acquired, and will be added to the garden equipment.

Rutherford, N. J.

Bobbink & Atkins, nurserymen and importers, Rutherford, N. J., have received about a hundred carloads of choice ornamental trees and shrubs this Spring, and their extensive nursery grounds are well worth a visit. Special features among their recent importations are large specimens of blue spruce. Some of these have sold at $200 each. Of bay trees, the largest specimens ever brought over the Atlantic are to be seen here. There is also an array of very large standard box trees, symetrically shaped and perfect in every particular. Euonymus in many varieties have arrived in perfect condition, and there is a noted demand for these beautiful specimens.

A very important part of the nursery is that devoted to topiary plants. Here are to be seen buxus trained and grown to every conceivable shape almost; not only are birds and animals represented, but also sea-going vessels, such as yachts, man-of-war vessels and steamships. Importations of this class of shrubs are increasing yearly, and they seem to meet with ready demand among the larger private estates.

Rhododendrons are also in very heavy supply, and the list includes all of the best known varieties either in medium or large sizes.

A new department has recently been inaugurated, viz., the manufacture of tubs. Heretofore it was utterly impossible for the firm to secure tubs suitable for large bay trees, rhododendrons, etc. Now the difficulty has been overcome by erecting a suitable workshop and employing practical tubbers, and having the goods made on the premises.

As an indication of the rapid growth of Messrs. Bobbink & Atkins' business, we may state that there are 85 workmen regularly employed, in addition to the office staff.

Indianapolis, Ind.

Window Dressing.

As each year passes the home florists become more adept at window dressing. The windows this Easter were simply elegant. A cross, nine feet in height, of galax leaves, bordered by small incandescent lights with a large bunch of lilies at the center, a mass of rock studded with ferns and tiny electric lights at the base and a background of Adiantum Farleyense, lilies and azaleas was the feature in Bertermann Bros.' window.

Wiegand's window was filled with a variety of blooming plants effectively arranged.

John Rieman's window had a large vase of cut flowers and electric lights in the center, with a quantity of lilies and lilacs at the sides; it was greatly admired.

Jottings.

The Indianapolis Plant and Flower Co. lost a number of Mrs. Lawson carnations which had been stored in the cellar for Easter. Mr. Hasselmann's favorite expression now is "rats!"

Several of the market florists, foreseeing a large demand Saturday, were content to hold their goods for stiff prices until the other fellow had disposed of all his choice stock at cheap figures, and came out ahead. I. B.

ST. LOUIS.—The Chicago Florists' Bowling Club paid a visit to St. Louis last Sunday. They were seven in number, among them Ed. Winterson, Charles Balluff, George Asmus, George Stollery, Phil Hauswirth, Fritz Balluff and Leonard Kill. Chairman Beneke chaperoned the party to the World's Fair Grounds, and in a ride through the residence part of the city in the morning. The afternoon was taken up with the bowling match, in which the Chicago team won all three games. A number of the local florists were at the alleys as onlookers. The St. Louis bowlers felt quite bad over the loss of the games, but say they will turn the tables next August. After the bowling the party was taken to Faust's for supper and a social talk, which lasted until nearly train time. The trip to the depot, which was an eventful affair, passed off smoothly, and as Ed Winterson, the last one to pass through the gates, said, "Boys, we had the best time of our lives; come up and see us soon and we will do the same thing. I didn't get mine, but Balluff did."

The score:

New White CANNA MONT BLANC

The Greatest Novelty in Cannas

MONT BLANC will become one of the most popular Cannas for bedding purposes; it contrasts so beautifully with the crimson varieties, and grows so even in beds. It has ample bright green foliage; the flowers have fine form, the spikes are large, entirely erect and are borne just the right distance above the foliage.

Potted Plants, 75c. each, $7.50 per doz., $50.00 per 100.

Send for List and Prices of 50 other leading varieties of Cannas.

New Crimson Rambler, "PHILADELPHIA"

Flowers larger, more double, do not fade white, more durable, brighter color, not subject to mildew as Crimson Rambler is. 2¼ in.

$1.50 per doz., $10.00 per 100, $80.00 per 1000.

VIOLETS

Now is a good time to get them out, and why not grow the best? La France leads them all; will bloom two flowers to one of Princess of Wales. Well rooted crowns in healthy condition: **La France,** $1.00 per 100; $8.00 per 1000. **California, Princess of Wales** and **L. H. Campbell,** 75c. per 100; $5.00 per 1000. Add 15c. per 100 for mailing. Money Order Station, Eddington, Bucks Co., Pa. Cash with order, please.

P. M. DE WITT, Bridgewater, Bucks Co. Pa.

The Princess of Wales Violet

Violet growers cannot afford to to be without this grand and popular variety. Growers in the vicinity of Boston know that this Violet is rapidly and surely becoming more popular and sells for higher prices than any other variety, either double or single, growers in other sections have a great opportunity for taking up and growing this variety.

I have the largest and healthiest stock in the country and am booking orders NOW for strong young plants for April and May delivery, at $2.00 per hundred; $15.00 per thousand. 500 at thousand rates.

WILLIAM SIM, Cliftondale, Mass.

What our Advertisers Say 482

Kansas City may have no flower show this year.

English growers are agitating the inauguration of still another floricultural society—this time a Pansy and Viola Society.

Wm. F. Dreer, of Philadelphia, is laying out fine private grounds adjacent to his California residence at Santa Barbara.

Considerable excitement is prevalent in England over the National Sweet Pea Society's decision to exclude members of the trade from acting in the capacity of judges at the forthcoming exhibition of the society. The policy is characterized as narrow-minded and ungenerous.

THIS WEEK'S SUPPLEMENT.

Magnolia Soulangeana.

In the whole list of exotic trees and shrubs we recall nothing that so forcibly reminds us that Spring is here as does the Magnolia Soulangeana every April. We say every April, because the plant is just as sure to flower as that April will come. Wherever hardy, which is practically over the whole of our country, omitting the extreme North, it is the chief ornament of the lawn at that season, beautifying the surroundings, and giving pleasure to thousands who see it.

The illustration, showing the myriads of flowers, depicts nothing unusual. This particular bush and all similar ones are filled with flowers in a like way every season. Note how this bush stands alone in its Spring beauty amid other bushes and trees near it in a dormant state! In a large park bushes of these and other species of magnolia flowering at the same time are objects of great beauty, presenting as a whole great masses of pink or white blossoms.

The one before us, M. Soulangeana, is termed a pink one, because the unexpanded buds are pink. When the flowers open they display the white color of the inside of the petals. It is then that the great beauty of the whole is presented to view, the pink buds and the expanded white flowers mingling together. Such a picture was our bush when photographed. As will be seen, the flowers on the upper branches were not expanded, while those on the lower ones were. The display attracted every one passing near it.

What a little warmth will do for flowers is well illustrated in the picture. On the southern side the flowers are fully expanded; on the north they are not, neither are they on the top branches. The nearer the ground the branch of any shrub is, the earlier the flowers on it open, as golden bell, yellow jasmine and bush honeysuckles give us evidence of continually. But though we want flowers early, trouble often comes from warmth bringing out magnolia blooms so early that late frosts catch them. The bush illustrated has been lucky enough to escape late frosts three seasons in succession, but previous to this it lost its flowers two years consecutively. It suggests that if one has a choice it is better to plant on a northern exposure, as this may mean a week's difference in time of flowering, oftentimes sufficient for freezings to pass. In the picture before us the flowers on the north side were a week behind the others in expanding. This and similar species of magnolias seem never to tire of flourishing and flowering. This specimen is eighteen feet high by twenty-four feet in width, and it has been blooming every year since it was but two feet high. It has been permitted to grow at will; and, certainly, it fits its position well. In some situations, such as when near a dwelling, it is often better to grow magnolias as small trees, accomplished by cutting away all the lower twigs, leaving but one central shoot to form the tree.

The only safe time to transplant magnolias is in the Spring, unless they are pot-grown. Keep the roots from drying; prune heavily, and success usually follows. JOSEPH MEEHAN.

Society of American Florists and Ornamental Horticulturists.

DEPARTMENT OF PLANT REGISTRATION.

The Good & Reese Co., Springfield, O., have submitted for registration, climbing tea rose "PILLAR OF GOLD." This rose was found growing in the open field among fifty plants of climbing Bridesmaid and is supposed to be a sport from that variety. It combines with the climbing habit of Climbing Bridesmaid the foliage of Duchesse de Brabant and the flower of Mdlle. Franciska Kruger. Buds pointed, first showing pink, when half expanded coppery yellow and pink, when fully expanded golden yellow flushed crimson and pink. Flowers double and full to the center, blooming on both single stems and in clusters of 3 to 8 blooms, in crops throughout the season. A vigorous, rampant, grower, making canes from 10 to 15 feet in one season. Has stood 20 degrees of frost without damage.

WM. J. STEWART, Secretary.

WHAT OUR ADVERTISERS SAY

Under this heading The Florists' Exchange, commencing with the issue of May 2, 1903, will publish voluntary statements, each limited to fifty words, from its advertisers, calling attention to the main items offered weekly in their advertisements. The object is to assist our patrons.

The largest as well as the smallest advertiser is entitled to contribute.

Communications of this character must reach us *not later* than Wednesday morning.

The experiment is tentative, and we shall be guided by developments regarding its continuance.

Prices are not to be quoted.

On no account will matter of this kind be written up in this office.

Each advertiser must assume responsibility for the statements he makes.

SAMPLE STATEMENTS.

Henry A. Dreer, Inc., Philadelphia. We offer this week Golden Pandanus Sanderi. A cablegram from Ghent (Belgium) Exposition announces a gold medal has been awarded plants of this novelty shown there. This makes the third gold medal captured by Pandanus Sanderi, four silver medals, a silver cup, and several certificates.

Anderson & Christensen, Short Hills, N. J.: We offer a fine lot of Jardiniere Ferns in fifteen of the best varieties, from 2½ to 4 inch pots. Also Fern Spores gathered from our own stock.

Killing Weeds in Lawns.

The Agricultural Experiment Station of Vermont has been giving further attention to this subject. The fifteenth annual report, just issued, contains the following comments thereon:

Apparently most of the coarser, deep-rooted perennials can best be combated by frequent spudding or cutting out and close mowing accompanied by proper fertilization, watering and abundant seeding with the proper lawn grass at favorable seasons. Dandelions, plantains, white dasies and the docks are best dealt with in this way. These plants all have a distinct "crown" near the surface. A remedy used with some success against these pests consists of the application of a few drops of a strong acid to the center of this crown. Sulphuric acid may thus be applied with a glass tube or crude carbolic acid with a common metal oil can. In most cases, however, we believe spudding to be the better method.

There is another class of weeds which are very shallow-rooted and succeed even under close mowing because of their creeping habits or because of the abundant production of seed on prostrate stems. The orange hawkweed, or paint brush (Hieracium aurantiacum), smaller crab-grass (Panicum lineare) and common chickweed (Stellaria media) are three of the more troublesome of this class. The trials first reported in Bulletin 56 of this station showed that salt, when properly applied, is a perfect remedy against the hawkweed. It has seemed worth while to try it, along with various different remedies and methods, against the other two weeds. The outcome in the case of the crab grass has not favored the use of salt, but with the chickweed it has proved a very satisfactory herbicide.

We suggest that any one employing salt on a lawn do so cautiously and on a small scale at first, as the effects will doubtless vary somewhat with soil and season.

As regards the eradication of crab grass from lawns, the subjoined specific methods are recommended:

1. Be sure that none is introduced in the grass seed.
2. Use grass seed, fertilizer and water freely as needed to keep a full stand of grass in vigorous growth.
3. If but little of the crab-grass appears in the lawn, weed it out by hand.
4. If it occurs in considerable amount, in late Summer and Autumn rake the place where it occurs before using the lawn mower so as to raise the prostrate seed-stalks high enough to insure that they are all cut off. Repeat the raking and mowing frequently—once a week or oftener, during Autumn, to prevent the maturing of seed so far as possible.
5. Remembering that this weed grass will die during the Winter, make a heavy sowing of grass seed in early Spring so that all bare spots in the lawn are promptly covered with a new growth in the early Spring and the new seeding fully established before the crab-grass seed germinates in the early Summer.
6. For such seeding use a mixture of timothy and Kentucky blue-grass with much white clover. Ten pounds of timothy, ten pounds of blue-grass and two pounds of white clover is a well proportioned mixture for most soils; but in fighting this weed grass we have found it desirable to increase the relative amount of clover seed, especially on sandy soil. Be sure to keep the newly seeded lawn well watered.

CORRESPONDENCE.

Adiantums Croweanum and "Hybridum."

Editor Florists' Exchange:

In your issue of the 4th inst. ther appears an illustration and descriptio of my adiantum "hybridum," also on of A. Croweanum. It should be know that both represent the same plant. A soon as I heard that Mr. Crowe had stock of it and proposed to give it hi name I wrote him to say that "I raise and named the fern, years ago, A. hybridum and had sold a limited numbe of it to various growers all over th United States; and it also appears i several catalogues under my name an that no new name should be given for trade purposes, causing confusio among growers." I sent Mr. Crow plants and fronds to identify. I als protested to Mr. Stewart, secretary the S. A. F., against the name Croweanum being registered, as th committee should, before doing so, assure themselves that the plant is n already named. This writing was abo a month ago, but I have had no rep from either gentleman.

JOHN H. LEY.

[Mr. Crowe informs us that the fer are entirely distinct. The matter ca be settled through the S. A. F. O. H and is, we understand, receiving t attention of that body.—Ed.]

Buffalo's Department Store Sho

Editor Florists' Exchange:

I would be glad if you would publi the following for the benefit of t florists of Western New York:

The H. A. Meldrum Co. departme store on Maine street, Buffalo, N. held last Fall a chrysanthemum sho The classes were limited, but sufficie to draw out a really fine show. T cash premiums amounting to $400. were promptly paid, and many tho sands of people were attracted to t store. Free shows are usually very po ular.

This year the firm has asked t Buffalo Florists' Club to get up a sche ule of prizes amounting to $1,000.00 cash. The individual premiums will large, for the exhibition is to be co fined to chrysanthemums, and a ve few rose classes.

Charles Keitsch has been appointed manage the exhibition, which is a gua antee that it will be carried out in systematic and business-like way.

WILLIAM SCOTT.
President Buffalo Florists' Club.

The Lady Gardener.

Just as I was finishing off this pape a friend, who saw the title, asked n how I could write of "The Gardener a Man," when I knew that some of t gardeners were women? When I aske if he meant that some gardeners we "old women," he said "No," rath snappishly. "No," he said, "certainly no What I mean is that girls are now b ing trained in horticultural colleges an hostels, and after a two years' cours at a cost to themselves or their frien of about $500 a year, they are turne out as full-fledged lady gardeners! An believe me," he said, "the lady gardener has come to stay!" When I pointe out that the whole thing was partly fashionable fad, and partly a mea of obtaining boarding school pupi able and willing to give their labor an pay fees, and that the successes we less than a tithe of the failures, m friend waxed wroth and spake ba words! When I said that not on young girl in a hundred was physicall fitted for the necessary hard and roug labor of a garden, and that even a mal expert could never garden properly any skirts longer than a kilt or a "cutty sark," my friend's language becam quite beyond pen and ink, even as mild translation! Given a becomin costume, and robust health, the bonni lasses are quite welcome to come a play in the garden. We are all glad see them; they are, God bless 'em, a welcome as was Eve in Paradise—a welcome as are the flowers of May. Bu the tall and braw lads in the both will pity their struggles with the spad and hasten to assist them; for pity, a every mother's son doth know, is nearly akin to love.—F. W. BURBIDGE.

Reflections on Current Topics.

Mr. Editor: I am certainly deeply indebted to the gentlemen who seem solicitous about my personal welfare, as shown by the communications which appear in your number for April 11.

With reference to that "horticultural rubber ball," stated by H. A. B. to be a boon to some people, myself included, I believe I'll pass it—to the "Ginger Jar" author. Rubber balls rebound; and he can stand harder knocks, with evident relish, better than I can.

⁂

Your other contributor—John Birnie—seems to excite himself over "high balls" at club meetings, mentioning, among other things, their efficacy as a nerve-strengthener that makes men brave to sign their own names. I don't know whether the appearance of Mr. Birnie's signature at the end of his effusion is the result of the stimulative character of the New York Florists' Club "brand"; if so, he is the first Scotsman that has come to my knowledge who required "Dutch courage" to fortify him in any of his actions. The Scotch of my limited acquaintance usually have naturally nerve enough for anything.

⁂

But to the point at issue: I am willing to concede all that your correspondent claims for the cordial character of the florists' clubs; even what his "old friend, Jim Braik," remarked about the florists, though he, too, I believe, is from beyond the Tweed. But what has all that got to do with a foolish expenditure of club funds? Cannot man be friendly, gentlemanly, and sociable without drinking at the club's expense? As I look at it, there is nothing to be vainglorious about, or to hurrah over conviviality when someone else disburses the bill. The lesser meanness, too, surely lies in each one paying for what he himself consumes—individual encouragement of the habit, as it were, thus promoting Webster's wishes. That may not be sociability, or conviviality, as usually considered, but it's independence—something, by the way, all the Scotch pretend to be superendowed with.

⁂

I observe the original American Peony Society has finally got settled down to business, with a list of able men as its officers—men who actually know something of the peony cult, its needs and present drawbacks. The membership of this society, too, seems to be composed of most of "the leading firms" interested in the peony, not anxious to get into the S. A. F. by a back door. With such a combination, the society is likely to do good work, and make some real progress. No doubt it will be thankful for any little assistance rendered by the agitation created by the dogmatism—which Douglas Jerrold says is puppyism grown up—of the "association" that tried to supplant it. There would seem to be nothing left for that other body but to conform to its first orders and declare its composition, so that the members of the S. A. F. may know who's who on an important committee which might be, rightly conducted, a real serviceable adjunct to the American Peony Society.

⁂

A word, in conclusion, as to signing my name. Let me quote from an authority on this subject: "Anonymity has its uses, and some good authorities have admitted that it is one of the greatest powers of the press when properly used. In the case of an argument it often happens that two or more opponents will discuss it better when unknown to each other than otherwise. A good argument, or a well-written article, should stand on its own merits, and if couched in terms that the average reader can understand, it can generally be appreciated at its worth, whether the writer signs his name or not." We have in our trade papers nowadays some articles that are couched in unmistakable language. These are all the better signed with a "synonym," such as "The Fool." Such a signature makes them still less of a conundrum. That, and the further reason, that "what one doesn't know, doesn't vex him" is why I prefer to subscribe myself and keep others guessing as to the identity of JOB.

Obituary

C. Ferrari.

Columbus Ferrari, a well-known florist and nurseryman of San Francisco, Cal., died on March 14 last. He was born in Italy February 13, 1838, and had been actively engaged in the florist business in California for the past twenty-two years. He leaves a widow, one daughter and five sons, four of whom are engaged in their father's calling.

Mrs. Charles W. Stuart.

Mrs. Charles W. Stuart, wife of the well-known Newark (N. Y.) nurseryman, died at her home in that place on Monday last, aged 63 years. She had been in poor health for some time, and her death was not unexpected. Besides her husband, two sons and three daughters survive her.

NEW BOOKS.

THE NEW ONION CULTURE. By T. Greiner. Rewritten, greatly enlarged and brought up to the present day. Liberally illustrated, 5x7 inches, about 150 pages, cloth. Orange Judd Company, New York.

A complete guide in growing onions with the greatest profit, explaining the whys and wherefores. Thousands of farmers and gardeners, and many experiment stations have given it practical trials, which have proved successful. Clear and minute directions are given of how the plants are grown; the cold frame; seed bed; planting; fire hotbed, hotbeds heated by steam; cheap greenhouse for market gardeners; greenhouse heated by hot water; quantity of seed required; time of sowing; varieties; what soil to select; how to manure and prepare it; onions on muck soil; clean soil essential; how the plants are set in the ground; tillage as moisture preserver and weed killer; tools of tillage; danger in delay; signs of maturity; curing the crop; curing sheds; weight of crop; wintering onions; advantages and profits of the new way; estimation of cost and returns. Prizetaker and Gibraltar onions, when well grown by this method, cannot be distinguished from imported onions, and there is no reason why American farmers should not raise all that our markets require. Sold by the publishers of The Florists' Exchange. Price 50 cents, postpaid.

CHANGES IN BUSINESS.

GREENVILLE, PA. Ben Williams has opened a flower store here.

SPRINGFIELD, MASS. H. Grout has sold his greenhouses to N. F. Higgins.

CORRYVILLE, O.—Charles Schweizer has opened a branch store at 2533 Vine street.

TARRYTOWN, N. Y.—J. F. Detmer is starting a nursery and florist business here.

DEANSBORO, N. Y.—Miss Addie Foote will build a greenhouse and embark in the florist business here.

GREENBORO, N. C.—C. Scott & Co. have purchased the clover and grass seed business of J. W. Scott & Co.

OREGON, ILL.—Miss Agnes Patterson has opened a florists' store here. She was formerly with a large seed house in Rockford, Ill.

BINGHAMTON, N. Y.—Clarence F. Norton has retired from the firm of Wm. H. Graham & Co. on account of poor health. The business will be continued by Wm. Graham, its founder.

LOS ANGELES, CAL.—The Golden State Plant and Floral Company has been incorporated; capital stock, $25,000. Directors: Carl F. Schader, T. A. Johnson, T. H. Dudley, V. E. Hatheway and Nellie M. Schader.

CRIPPLE CREEK, Colo.—Frank E. Smith, formerly of the firm of Frichie & Smith, has purchased the Mitchell seed house, 1551 Champa street, Denver, and has added cut flowers, plants, birds and goldfish.

OMAHA, NEB.—Herbert Slocombe, formerly with J. H. Slocombe, of New Haven, Conn., has purchased the Clifton Greenhouses here. He will make a specialty of violets (Marie Louise variety), and will add four houses, each 20x210 feet, to the six already built.

ALLENTOWN, PA.—After Easter, E. Ashley will move from 17 North Sixth street to the Commonwealth Building and Horn Bros. will remain at their old stand, No. 20 North Sixth street. Miss Sallie L. Smith will remove from No. 103 North Seventh street to the old stand of A. B. Ellsworth, No. 17 North Sixth street, where Mr. Ellsworth will take charge once more, Miss Smith being his assistant.

GEORGETOWN, ONT.—The Georgetown Floral Company, Ltd., is the name of the new company that will enter into a rose growing project in Georgetown. J. R. Barber, M. P., R. D. Warren, R. J. Creelman, H. P. Lawson and other prominent citizens are interested in the enterprise. The capital stock will be $40,000, provided in shares of $25 each. The position of managing director has been offered to H. W. Kennedy.

A Hail Storm.

A hail storm struck Appleton, Wis., on April 1. Kienah's greenhouses suffered; also the greenhouse of the Oak Grove Cemetery.

Noteworthy New or Little Known Hardy Plants.

Read by Herbert Greensmith, of Henry A. Dreer, Inc., Riverton, N. J., before the Florists' Club of Philadelphia, April 7, 1903.

The great advantages of gardening with hardy plants and shrubs as compared with tender bedding plants has been so frequently and explicitly described that it would serve no utilitarian purposes for a man of my caliber to even try to point them out. One thing I would like to say, though, and that is, that the objection of the short blooming period of these plants is all fallacious. I think it is a really meritorious thing and one which must sooner or later prove itself to every average American citizen. For a very small outlay one may have a hundred of these surprises a year—that is to say, hardy plants are being offered so cheaply that one may have one hundred different kinds to name for a very moderate outlay.

It has taken a great many years to educate the people up to the beauty and utility of these plants, which can be used, owing to their endless variety, for almost any conceivable purpose. They are or can be adapted to all soils and situations, high or low, wet or dry, sun or shade. One of the most hopeful signs of the present day is the ever-increasing demand for these plants, and that demand is being met in an energetic manner all over the country. It has been said that people buy what the local florist has to offer. How near the truth this comes I leave you to answer; but truly no up-to-date progressive florist can do a successful general business without some hardy plants.

The demand for hardy plants is only of recent date, and many beautiful varieties are unknown save to a few of the more fortunate. But few gardeners and florists have had reason for more than a passing knowledge or interest in them. Said a prominent Germantown florist to me a year ago last Summer: "I'd like to know what's the matter with the Chinese primroses I bought from you. They looked so fine and nice when I bought them. After they were through flowering I plunged them outside and they all died." I advised him to look over the place where he plunged them and see if he could not find the dormant corms. He did so and found them all right. A similar instance occurred at Riverton four years ago this Spring. A few plants of Actæa japonica were bought for trial. They were potted and I suppose had made considerable growth before being planted, which I am told was very carefully done. Result: The foliage all died off in the Fall. When I took charge of the work I was told the history of the plants and their untimely death. I rather smiled, scratched down to the roots, and found them, but was assured they were dead. Anyway, next Spring I dug them up just as they commenced growth, planted them, and the following Spring Actæa japonica was introduced as a novelty.

For many years geraniums, coleus, alternantheras, achyranthes, echeverias, and a few similar plants seemed to hold the general sway. Then came the stately canna, and in its wake now comes the ever-increasing demand for something more substantial, and that demand can only be met by hardy perennials.

In hardy plants we have been told time and again we can have flowers the entire year round. A year ago last December I went out in the woods near my home and was surprised to find the yellow aster (Chrysopsis mariana), and last December, in our nurseries, and only a few days before Christmas, I found in bloom Dianthus semperflorens, various megaseas, and one very beautiful variety of erigeron, the highly praised torch flower, in a sheltered spot, sending up its dense spikes of flaming coral and braving not the Autumn, but the Winter storms. What tender plants would have been showing up so wonderful and brave on the Autumn landscape?

Helleborus niger and its varieties, if grown in a cold frame, will give us flowers during the latter part of December and January, and those who are fortunate enough to possess a few plants of petasites or Tussilago fragrans, or "Winter heliotrope," as it is sometimes called (on account of its heliotrope-like fragrance), can have flowers of this peculiarly interesting plant in a warm, sheltered spot during the month of February.

Then along in March comes a wonderful procession of both bulbous and hardy plants. We had some twenty-five or thirty varieties in flower this March. One of the first to bloom was Adonis davurica, a Japanese species which neither frost nor cold seems to prevent from flowering in early March. This year it opened its first flowers March 3, and there are still blooms to be seen on the same plant to-day nestled down among its finely cut foliage. The plant is a good, free, easy grower, and keeps its foliage much longer than any of the other varieties and is really better adapted to the American climate than either A. vernalis or A. pyrenaica. The flowers are not quite so bright nor so large as those of A. vernalis, but it makes up for this deficiency by flowering fully three weeks earlier and by its more beautiful, clean, finely cut, fern-like foliage. Botanists say this and A. vernalis are identical, but the plants are very widely different from a horticultural point of view. A. davurica was introduced from Japan, where it is known under the name of Fuki-Yose, which means "good luck." There is also a very pretty double-flowered form of this which comes into bloom very shortly after A. davurica. The flowers of this in the early season are peculiarly interesting, having several rows of yellow petals, then several rows of green fringed petals with a small, buttercup-like flower in the center of all—the combination seems rather strange, but it in no way detracts from the flower's beauty. If it maintains this character it ought to be very successfully used on St. Patrick's Day, as all it seems to need to bring it in then is the protection of a cold frame. Later on, this green portion of the flower seems to almost disappear.

Another very early flowering plant that has excited much admiration on our grounds this year is Primula cashmeriana capitata. This is a very handsome, easy, robust growing Himalayan species, considered to be a variety of P. denticulata, though it is smaller in all its parts. The flower heads, which are globular in form, are produced on scapes six to eight inches long; the flowers are deep violet blue and very densely set in its capitate head and are both effective and attractive at this early season of the year. Its first flowers opened without any protection about the 20th of March. Under straw protection they came a little later. It is said by some to be a very short-lived plant, but it is so easily raised from seed, which germinates very quickly, in early Spring, that this point should not be considered. On account of its great beauty it should be grown by all true lovers of hardy flowers. I see no reason why it should not make a very good pot plant, though it appears not to like greenhouse treatment. Its chief points of culture are a half-shady spot, in good, rich, moist soil.

Primula cortusoides Sieboldii is a plant which has been brought before you for two or three successive years at the Spring horticultural shows. This, I consider, is one of the best and most useful varieties of the primula family. It succeeds equally well both in the greenhouse and outside. Its requirements are few and simple. For inside, take up the plants in the Fall, store them in soil in a cool spot till January or February, then divide to single eyes, potting in a good rich compost to which well-decayed cow manut, peat, and sand are to be liberally added. Use 2 or 2¼-inch pots, according to the size of the plant, moving up into 3-inch or making up into pans if wanted for decoration. These plants will stand more heat than most members of this family; the only perceptible effect has been in the lengthening of the foliage and flower stems. I prefer for best results a temperature ranging from 40 to 50 degrees. If a continuous succession of these is required, all that is needed is to bring them in gradually from December to March. By the time these are past the ones planted outside will be beginning to flower and will keep up a continuous show during the months of April and May, making it possible to have a display inside and outside for nearly four months. And there is such a beauty and variety in color running through various shades of white, lilac, and rose to deep crimson, with both plain and fringed edges, the individual flowers being nearly two inches across. Planted out in the open, the small rhizomes creep along the surface of the soil and are apt to be burned or otherwise destroyed if a little care be not exercised with them; so, as soon as their growth is completed, take a sieve and cover them all nicely over with, say, a half-inch or so of good fresh soil. This, I find, is of great benefit to them, as it protects them from the burning rays of the sun and other enemies. Quite a list of named varieties are offered. Division is the quickest method of propagation. They can be grown from seed, but it germinates very slowly. Seed freshly gathered and sown immediately will not germinate until the following Spring.

Primula acaulis cœrulea is another scarce and very choice plant. G. F. Wilson worked many years very patiently and industriously to fix this type, and the result is we have in "Wilson's Blue" a very good form of Primula acaulis cœrulea, quite a large percentage of which will come true from seed.

Shortia galacifolia, a truly beautiful plant with a unique history, was first discovered by Michaux, a French botanist, in 1788, but was not described by him; this work remained to be performed by the indefatigable Asa Gray. In 1839, being in Paris turning over the herbarium specimens of Michaux, Gray discovered the leaves and a single fruit of this singular plant with only this brief description: "Les hautes montagnes de Carolinie" (The high mountains of Carolina.) Dr. Gray's curiosity was so completely aroused that on his return to America he went to North Carolina and diligently but unsuccessfully searched for the plant. In 1877, however, wandering on the banks of the Catawba River, a boy picked up a strange flower and carried it home to his father. His father, being an herbalist, through correspondence soon learned the true name of the plant. Still this was not the true home of Shortia galacifolia. Another discouraging and unfruitful expedition was made in search of it. In 1886 Professor Sargent visited the mountains of North Carolina looking for Magnolia cordata, and picked up, among other things, a strange galax-looking leaf, not knowing what it was; but two weeks later he returned to locate his plant and Shortia galacifolia was again discovered, but only in a limited quantity. In the following Spring, however, a Mr. Harbison started out in search of it and found it growing in great masses. One writer says, in fact, there were acres of it. Truly, this must have been a magnificent sight. It is said that it was taken away in wagon loads, and still it appeared to grow in almost unlimited quantities; thus, in 1887 or 1888, it was put into commerce. In Europe it was and still is a very much desired plant, and we still find it listed as a novelty. At Riverton this plant made a glorious showing for nearly two weeks during the month of March. A few flowers still remain. It is planted on the rockery in a spot where large stones give it the necessary shade and protection it seems to require. The flowers are pure white and beautifully scalloped on the edges; the foliage is evergreen, turning to a beautiful bronze in the Fall. It is propagated generally by division, and makes a good pot plant.

Nearly everybody is acquainted with the old white rock cress, Arabis alpina or A. albida. Arabis alpina fl plena, the new double-flowering variety, though blooming a trifle later, is quite a welcome and useful addition. It produces a large quantity of double white flowers on very stiff stems which permit it to be very successfully used as an outdoor cut flower at a season of the year—during April or early May—when white flowers desirable for cutting are not overplentiful.

Anemones have been too long before the public for me to give anything but just a passing comment. I would like to call attention, however, to that beautiful companion of the Winter aconite, snowdrop and crocus, namely, Anemone pulsatilla. It is truly a good thing, being a free, early flowering, easily accommodated plant, throwing up its lovely purple, silky golden centered blooms before the leaves appear. It flourishes in nature on open hilly pastures in sunny positions and is said to flourish best in chalky soils. This is another truly wonderful family. A collection can easily be made which will cover the whole season from March to December. What is more beautiful than the pure white snowdrop windflower, Anemone sylvestris, and its newly introduced congener, A. sylvestris fl. pl., which is a double white flowering form blooming a little later than the former named, and with our native white form of A. pennsylvanica, continuing until the Japanese types take up the wondrous show! What is more beautiful in the Autumn months than a nice vase of A. japonica alba, or the larger form, Lady Ardilaun, or the beautiful, delicate pink form of Queen Charlotte? A newer arrival is A. rosea superba, a very beautiful single form nearly the color of Queen Charlotte, but a little earlier to bloom. Mont Rose, another new form, is a very large distinct kind, with large, almost perfectly double flowers of a lively shade of pink, though of a different type and color from Queen Charlotte, and it is not quite so free flowering. Some ten

EASTER DISPLAY OF JOHN COOMBS, HARTFORD, CONN.

welve other varieties have been l at Riverton, but found wanting. aaps in other soils, with different atic conditions, other equally good may be found. The most beauti- white anemone to-day is A. japon- Geant Blanche, sent out by that ller-worker in novelties among ts—V. Lemoine. It is simply a white gigantic form of A. japon- with extra strong foliage and as, and flowers three to three and alf inches across, and is a free and rous grower.

very cheerful sight in the early ng months in a bed or border is a bunch of the German catchfly, hnis viscaria. This is a very use- plant for cutting, but the most pop- lly known plant of this family is double scarlet form, which ought nd a place in every garden, how- small. A handsome pure white ered form of this valuable class of ts is its last addition, and a truly ndid thing it is. It is a neat grow- plant through the Summer and a desirable and useful one for cut ers in early Spring, when good e flowers are none too plentiful.

odium Manescavi, though not a plant by any means, is one which lmost constantly in bloom through- the whole season. It will grow and rish in the poorest of soils, where dreds of other things would simply sh, and still throw up its most rful flowers in the most contented ner, if such a phrase is permissible orticultural parlance. It is a mem- of the stork's bill family and the ngest and most showy member of having deeply cut oblong pinnate age and umbels of large, rosy pur- flowers. It is very easily raised n seed. It does not appear to like g disturbed after it is once estab- ed, on account of its long roots. s is a grand plant for the rockery ought to be more largely grown.

very interesting family of really fashioned hardy plants is the mo- da. Monarda didyma has held its e in almost every collection of note nearly two hundred and fifty years uly a most remarkable record. But, growing side by side with its com- r, M. didyma splendens, last Sum- on a bank gradually sloping down he edge of a lily pond, where both le a remarkable showing, poor old didyma was completely outdone by brilliancy of its rival, M. didyma ndens, which is a more robust wer and flowers more profusely and ntensely bright in color. Growing in group in beds from four or five wide and twenty-five to thirty feet g were M. fistulosa, M. d. purpurea, d. rosea, and the two above men- ed, but all sank into comparative gnificance alongside the newcomer. se plants are readily increased by sion.

Smith been called from the Massachusetts icultural College at Amherst to be- e assistant professor of plant pa- logy in the University of California. paragus rust is the disease which receive his first attention.

Washington, D. C.

ydney B. Wertheimer, of Lion & rtheimer, New York, was a visitor week.

Later Reports of Easter Trade

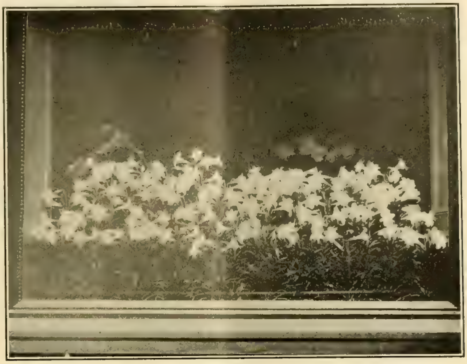
A Correction.

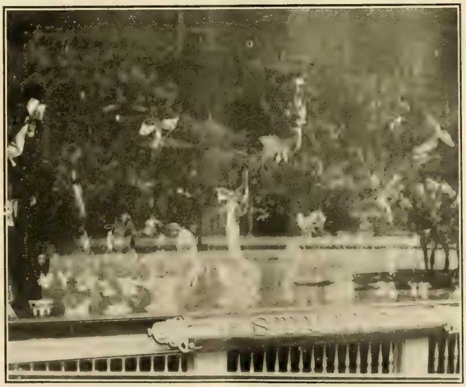
In my notes of last week I am made to say that the daily paper estimated the sale of cut flowers in St. Paul for Easter week at $10,000. This is a mistake, as it should be $100,000. I said one-tenth of that estimate would be nearer the truth. I meant one-tenth of $100,000.

VERITAS.

NEW BEDFORD, MASS.—Easter trade in this city was good. Prices were the same as those of last year. Considerable bulbous stock was left over in some stores. Chamberlin had a good supply of everything and sold out clean. S. S. Peckham, of Fairhaven, who established a branch on Fourth street here, is well pleased with his venture, as it provides him with a fine outlet for his stock.

X. Y. Z.





J. H. Small & Sons.

George Stumpp.

EASTER DISPLAYS OF NEW YORK RETAILERS.

DAVENPORT, IA.—Eastern trade showed a slight increase over last year's. There was a scarcity of lilies. More plants were sold than ever before. Some daffodils and other bulbous stock were left over. Owing to the scarcity and high prices of L. Harrisii, more callas were disposed of than usual at Easter.

J. T. TEMPLE

YORK, PA.—Easter trade was as good as that of last year. There was a great demand for lilies and hyacinths. The best selling stocks in cut flowers were carnations and roses. The prices were the same as those of last year. Baskets made up of lilies and jonquils and hyacinths, others of azaleas and hyacinths, sold very well at from $3.50 up to $7.00.

CHARLES E. SMITH.

BANGOR, ME.—Easter trade was the best in twelve years, owing to very fine weather and lateness of the season. I disposed of large lots of lilies, mostly longiflorum; azaleas, palms and Boston ferns at good prices 15 per cent. ahead of those of last season. Holland bulbous stock moved slowly at low prices. Carnations, Mrs. Lawson and other sorts, were the best sellers, at top prices; next came violets. Roses were in moderate demand. We cleaned up very nearly everything. Made-up lilies in large pots, with from 26 to 48 buds and flowers, tied with handsome ribbons, the pots covered with waterproof crepe paper, sold best and at high prices. I am looking ahead to a very prosperous Spring trade.

CARL BEERS.

NASHVILLE, TENN.—All the florists report Easter trade far in advance of last year's. Joy & Son had some very fine hydrangeas and azaleas that went at from $5.00 to $10.00; also some Crimson Rambler roses that sold well. Cut flowers always sell. Bride and Bridesmaid roses brought $1.50 to $2.00, carnations, 75c. to $1.00 per dozen. Geny Bros. had some fine azaleas and longiflorum lilies. The weather was clear and fine.

B. F. HENSLY.

SPRINGFIELD, MASS.—Easter trade was all that the florists could wish: good weather to bring on flowers that were a little late, and fine weather for handling plants. It was said that lilies would be scarce, but there were enough of them to go around, and at rates about as usual, although, in general, prices of flowers and plants were somewhat higher than last year. Azaleas, rhododendrons, astilbe, Crimson Rambler roses and bulbous flowers were abundant. Hyacinths in fancy baskets, with ribbons, were a feature with most of the storemen. On the whole, a very satisfactory Easter business, is the report of all. Many of the churches were beautifully decorated, although not lavishly; more flowers were used in this way than in some former seasons.

G.

LYNN, MASS.—Easter trade this year was, on the whole, satisfactory. Plants in small sizes sold better than last year. Lilies were very plentiful; very few were retailed for more than 15c. a flower, and on Saturday some of the florists dropped the price to 10c. The azalea was the next best selling plant, most all the good ones were cleaned out. Other plants sold in limited numbers. Nothing new was offered.

In cut flowers, carnations, as usual, were in greatest demand—there was not enough of them; 75c. to $1.00 was the ruling price with a few at $1.50 a dozen. Violets also were largely asked for, but were not as good as last year. A great many more could have been sold. Nothing seems to take their place for ladies' wear. Other flowers went when carnations and violets were gone. Bulbous stock moved very slowly. Church decorations were about the same as last year; nothing elaborate or new was noticed.

J. M.

SAN FRANCISCO, CAL.—Last Sunday was a benign Easter day in San Francisco. The past Easter will undoubtedly serve florists as an epochal date for future trade activity comparison. From a trade viewpoint observation made by J. F. Culligan, in service the last twenty-three years with Geo. B. Jones' 40-year-old floral stand at 317 Sutter street, the information was gleaned that business this year proved a highly emphasized record-breaker, an improvement as three to one over that of last year, when the coast record for Easter floral trade was scored. There was no advance in prices, not even for San Francisco's very popular carnations, the choicest of these going as usual at $1.50 per dozen. Everybody seemed to be in want of palms, ferns and lilies, and as the supply appeared to be limitless, the remarkable demand was met.

A new florist and decorator, Benj. B. Welch, arrived in this city and opened his store four days before Easter. A profitable business ensued. Florist Welch was successful in the Sacramento trade the last seven years. Decorative work is a feature with him. He is located at 321 Geary street.

ALVIN.

DENVER. Easter trade this year was up to expectations, with perhaps a slight increase. The weather throughout the week was ideal and was a big help in the matter of delivery. Saturday night it looked stormy and by Sunday morning early a full-sized snowstorm was in evidence and the day was very disagreeable and hurt trade quite seriously. What surplus remained after the rush might be laid to the bad weather of Sunday.

The show of stock this year was grand and, contrary to expectations, very little grumbling was heard about short-stemmed lilies. A low pot, or pan, of lilies, containing about fifteen to twenty blooms, was very popular. The lily was the thing this year, and by Saturday noon the supply ran short, 25c. per flower and bud being the general price. Crimson Rambler roses were fine, but moved slowly. Lilacs, of which some very good ones were offered, sold slower than in previous years. Spiraeas were plentiful, but cleaned out very satisfactorily. Azaleas sold well, as usual, but medium-sized plants found most favor, a few large specimen plants going slow. Some very good hydrangeas were offered and went well.

Plant baskets sold when something choice was wanted, but, as a rule, this year the people were after a medium-priced article.

In cut flowers, trade was good, carnations going best at 75c. to $1.00 per dozen, with the supply limited. American Beauty roses were in demand at prices ranging from $4.00 to $15.00 per dozen. In teas, the choice ones moved fastest, and at good figures, the best fetching $4.00 per dozen. Selected Mme. Abel Chatenay and Liberty brought $5.00 per dozen. Violets were very good for the season and sales satisfactory, these flowers fetching $2.00 per 100. Bulbous stock was overdone, and most of it was held over, only to be dumped.

P. S.

KANSAS CITY, MO.—The Easter rush over, the greenhouse men have time to sum up and plan for Spring planting. Without exception reports agree that the demand for Easter was all that could be desired and a cleaner, more profitable business has not been done before in recent years. A heavy increase was noted in the demand for blooming plants, which was met with a fine array of well-grown material. Unusual care had been given the Crimson Rambler roses and they sold readily at $3.00 to $5.00 each, in 8-inch and 10-inch pots.

The lateness of Easter Sunday this year was rather rough on the azaleas and acacias; notwithstanding this fact, the plants sold at the usual price of $3.00. Dutch hyacinths were never better, and the made-up pans containing 7 to 9 bulbs brought $2.50 and $3.00 each; and when a little matting and ribbon were added $5.00 per pan was the price obtained. The trimming of potted plants is becoming a necessary adjunct to quick sales, and prices obtained more than pay for the extra time and material required. Between the churches and hotels the stock of palms and decorative goods was about equally divided.

Those florists were lucky who had enough lilies for their trade and a goodly supply over, as lilies were much in demand for the after-Easter weddings.

In cut stock, there seemed to be no noticeable change, either in the supply or demand, over that of 1902. Roses sold at $3.50 and $4.00 per dozen. Fancy carnations at $1.50 and $2.00 were faultness, and, bulbous stock being plentiful, there was no reason for sending out salted goods. Daffodils went slowly, at 75c. per dozen. Violets were scarce at $3.00 per hundred.

There was a marked increase in plant sales, with the cut flower average about normal, making an advance of about 20 per cent. over last year.

Two familiar faces were seen this week—those of A. Ringier and John Fotheringham. Onion sets and the Pierson fern have an upward tendency about now.

Samuel Murray is once more at his desk, after three months' illness. Arthur Newell has also recovered.

ELLSWORTH.

MILWAUKEE.—Easter trade was fully 25 per cent. ahead of last year's. There was an abundance of stock in all lines, with the exception of carnations, the call for which was far beyond expectations. They were the popular Easter flowers and the sale of roses suffered heavily in consequence. Cut lilies went well and the supply was sufficient to meet all demands. Violets were off crop, having suffered on account of the warm weather during March; those on the market found ready sale. There was enough bulbous stock to go around. One of the principal features was the large variety of blooming plants in the market this year and the lavish displays made by the retailers. Among the growers, Chas. Zipnick had a fine lot of cinerarias, lilies and potted roses which were right in their prime. A. Billing made a specialty of lily plants and brought in an excellent lot. A. Klokner had a fine batch of lilac, mostly of the white variety, in bloom. Currie Bros. brought in some well-grown hydrangeas and azaleas, which sold well. C. C. Pollworth Company had a fine lot of lilac, longiflorum lilies, and lily of the valley in pots; also an excellent lot of Van der Cruyssen azaleas and a few Spiræa Van Houttei, which took well. Their roses were also in full crop and of excellent quality. The sale of palms and ferns was somewhat light, probably due to the large and varied supply of blooming plants in the market.

The retailers all report a prosperous Easter business. Currie Bros. made an excellent display in a large assortment of blooming plants. Wm. Edlefsen likewise had on hand a larger variety of blooming plants. Peter Kapsalis had his new store filled with azaleas, lilac, rhododendron and lily plants; also made an excellent window display. Jas. Fox, M. A. McKenny & Co. and Bamgarten Floral Company all carried a large stock and cleaned out everything salable.

The weather was excellent up to Saturday, when rain set in and disagreeable weather followed for a week later, shortening up the supply of cut flowers. Easter prices kept in force.

P.

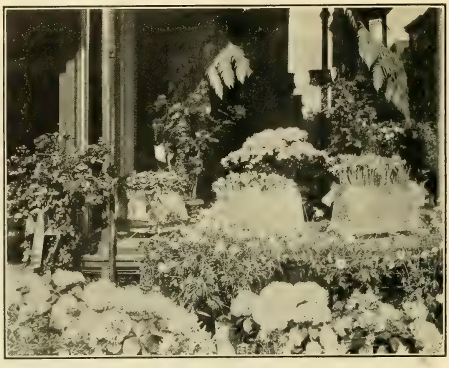
SALT LAKE CITY.—Easter business this year was about the same as last. Good flowers were in better demand. The weather was warm. Imported stock arrived in poor condition, and found slow sale. The new firm, the Salt Lake Huddart Floral Company, had an exceptionally fine lot of lilies, which found ready sale, and their Prosperity carnation house of five thousand plants was in the pink of condition. Trade generally here was good in cut flowers and potted lilies, but there was a slow sale for other potted stock.

P. T. HUDDART.

A Table Decoration.

The accompanying illustration is reproduced from a photograph of a table decoration recently furnished by Julius Baer, of Cincinnati, O., on the occasion of the Addy-Nave wedding. The materials used were Bride roses and Asparagus Sprengeri.

Review of the Market



EASTER DISPLAY OF HODGSON, NEW YORK.

TABLE DECORATION FOR A WEDDING.
Made by Julius Baer, Cincinnati.

NEW YORK—The wholesale cut flower trade of the past week has been anything but satisfactory. Usually, for a few weeks following Easter, business holds up quite well, but this year seems to be an exception, and we find the market at this time somewhat oversupplied with almost all kinds of seasonable stock. Of all the flowers coming in, there are only two classes of which it can be said the demand is equal to the supply—lily of the valley and white sweet peas. For these there is a good call, and the higher quoted prices prevail.

Violets, from the Poughkeepsie region, are still fairly plentiful, much more so than is the supply from Rhinebeck. It is evident, however, that the violet season is about over. Storemen buy but very sparingly, and the Greek merchants who usually handle so many of these blossoms, are leaving them alone almost, turning their attention chiefly to other Spring flowers.

Business in all kinds of roses is generally unsatisfactory; only a few can be sold at the highest quoted prices. The supply is so large that a great many have to be cleared out at bargain figures after having been held over a day. The standard varieties are now being greatly augmented by such kinds as Kaiserin Augusta Victoria and Ulrich Brunner, which have begun to come in quite plentifully.

Carnations have taken quite a tumble in value within the last few days. While the supply does not seem to be particularly heavy, the call is only for small lots, and it is a difficult matter to clear out unless the flowers are offered at bargain prices.

Excepting for a few out-door grown tulips the market is almost void of these blooms, but the supply of daffodils and other yellow narcissus keeps up amazingly. Lilies are in evidence in huge quantities still, and prices are down.

Cattleyas and lælias are coming in in limited quantities and the demand for them is only moderate.

Pansies, trailing arbutus, stocks and antirrhinum are on hand in quantity, and there is a limited supply of gladiolus.

Smilax is no longer the good thing it has been so long; the supply has increased materially, and a downward tendency in values is the result.

BOSTON.—Business this week has been very quiet, though at the market on Monday it opened up quite brisk. But growers and salesmen were not numerous, owing to the holiday, and the improvement was short-lived, as on Tuesday, with more stock, it moved harder at lower prices. On Wednesday the market took a decided slump, more especially in carnations. First-class flowers were freely offered Wednesday at $1.00 to $1.50 per 100, and
at that were not all cleaned up. F
dropped to $3.00 per 100.

Roses, too, are very plentiful afte
warm sun of the past six days, a
not find enough demand to clean o
daily receipts. Special American B
make $25.00 per 100, with No. 1 at
and $20.00, and smaller ones at from
up to $12.00. Special Bride, Brides
Kaiserin Augusta Victoria and So
du President Carnot make $8.00 pe
and go slowly, with seconds at $5.0
$6.00, and smaller ones at from $1
$4.00. Ulrich Brunner and General
queminot are in fair supply and sell
well, specials of the former rea
$10.00 and $12.00 per 100, while the
grade in the latter realized $16.00.

The supply of bulbous stock is d
ishing somewhat and much of it is
ferior grade, which makes it hard
dispose of. Good stock sells bette
than for some time; best Von Sion
making $2.00 per 100. A few tulips,
outside, are coming in, but there is
demand for them. Lilies continue p
ful at $6.00 to $10.00 per 100; and l
the valley is druggy. Some very
frame valley has arrived which sell
at $2.50 to $3.00 per 100. Violets co
in fair supply, but really fine one
becoming scarce. Sweet peas, pa
primroses, etc., are plentiful and sell

light supply.

C. S.

LOUIS.—The week after Easter ot much to the liking of the re- orists, who claim that business has off greatly. Some say it was a week to rest up after the very busy Plenty of every thing was in the t. The wholesalers are kept busy g what's left over in the ice boxes the morning sales. Prices are also off somewhat and in some lines can be bought at one's own figures. ing trade has kept up better than xpected after the Easter rush; in ne Frank Ellis reports a big trade n and Berning have also a good to say about shipping orders.

best long American Beauty roses ring $3.00 and $4.00 per dozen, with of shorts at any price. A fine other roses is in the market, with alues as low as $4.00 and no higher $8.00 per hundred. Lots of Bride ridesmaid, also Golden Gate.

carnation market is showing a bet- ondition than at any time during eason. The quality is good, and range from $2.50 to $4.00 per hun- The demand for carnations keeps specially for white and pink ones. e extra fine sweet peas are coming nd the long-stemmed flowers bring shorts, 50c. per hundred. Peas are ing more plentiful each day, and oon be a glut.

lets are a thing of the past, the weather putting an end to them.

reat glut is now on of Harrisii and lorum lilies, which can be bought 10.00 per hundred and the buds not ed. Lily of the valley and other us stock are in plenty, and the de- slow. Dutch hyacinths are selling the light colors only.

ilax is having a good call, owing to big weddings the past week, and mber this week. The market is in a condition just now that the man a big job can congratulate himself he can get what he wants without trouble. ST. PATRICK.

IANAPOLIS, IND.—"Just fair" is erm that may be applied to the r trade of Indianapolis. Had the ner been ideal instead of the oppo- business would have eclipsed that of ther years by a large margin. The men felt the effect of the weather far than the wholesaler or marketmen. n immense lot of funeral work on ay and Tuesday cleaned up every- in sight.

es sold exceedingly well this Easter. being a large demand for Bride and smaid, which went at $2.00 and $3.00 lozen. Short and medium stemmed ican Beauty sold well. The demand ng-stemmed Beauty was light. Lib- roses at $4.00 to $6.00 per dozen just a notch too high for most cus- rs. La France and Souvenir du dent Carnot roses sold well at $3.00 .00 per dozen, Sunrise at $2.00 to per dozen. An immense lot of tions was disposed of at an aver- rice of $1.50 per dozen, there being orders for boxes of one dozen car- ns than of any other thing. Sweet were favorites at $3.00 per hundred lisplaced violets, for which there was t demand. The small stock on hand to be pushed to be disposed of at 50 per bunch of twenty-five.

ver before did plants sell so well. marketmen disposed of enormous tities at prices above the average r figures. The storemen, too, Bert- nn, Wiegand, Billingsley and Rieman, well supplied with plants and ed up exceedingly well. Thirty-five ct kinds were counted in Berter- 's conservatory on Saturday. Azaleas the lead in specimen plants; pink cerise-colored plants, which ranged in from $2.00 to $5.00, sold in large tities. Lilacs, neatly arranged with and cover of Porto Rican matting, well at $2.00 to $3.00. Crimson Ram- roses are no longer a novelty, and not sell as well as expected. Hy- geas, with three to five large ns, were quickly disposed of, and, e other plants, sold better without n, etc.

e supply of lilies did not meet the nd by one-third. With the major of Easter buyers they were prime ites, as indicative of the seasonable t. Hampers containing four to five finished with moss and several ks, brought $6.00 to $8.00.

aller plants, such as hyacinths, daf- and pansies, were in evidence and particularly well. Distinct Easter lties, such as eggs, ducks or baskets ed with chickens and bunches of rib- did not sell, as the customers wanted rs, and not some novelty at two or times its value. I. B.

CHESTER, N. Y.—Certainly business never better, especially in the cut r line, as the main cry was "Not gh," even of violets, for when one keeper could have used 10,000 more. aggregate wanted was enormous. ations were very scarce, and sold ly at $1.00 per dozen. As for the trade, leave that to Wilson, who s to have sold out far beyond his tations. Especially fine were two oot houses of hydrangeas in 10-inch some plants having as many as large clusters of bloom. They have three plants left over of this stock. eas and all potted stock sold well. J. eller Sons report trade as 25 per cent. r than in previous years and still not fill orders for cut flowers except for high-price roses, of which some are left. This firm also claims a large shortage in violets, which can hardly be accounted for except in the excessive demand. Salter Bros. make a much similar report, and cleared up in fair shape. This firm thinks that cheap plants are things of the past, and in future will only handle that class of goods which for same amount entails less labor and more profit.

The "sell everything" stores are beginning to show dormant roots of roses, etc. No doubt they increase the love of plants in the breasts of some people, and in that way help out the florist, but 'tis peculiar that when such plants die the first person thought of is the florist, who, if he knows a good thing, will keep away from it.

The enterprising seed firm of Jas. Vick's Sons is certainly educating the public, for with their tasty catalogue and genial Tom Logan, more seeds are sold every year than previously, thus proving that to the retail seedsman at least advertising and first-class treatment to customers pays.

Cut flowers that were shipped in from surrounding towns showed effects of pickling; considerable of which stock one man threw away entirely. What is to be done in cases of this sort? Might not a florist better roll up a bill and throw it in the river? He would certainly be saving loss of time and much disappointment, to say nothing of "cuss" words heaped upon the "pickler."

General clearing up of left over plants is now in order, and Decoration Day comes next. One would imagine that that day is to-morrow by visiting the Vick & Hill Company. This firm has the largest order for Spring bedding stock to grow (which requires the entire room in three 100-foot houses) that it ever had; also a largely increased shipping trade. The question of competent help with this firm is a great factor; perhaps 'tis so with other firms. Method and good management are the two essentials, and here they can be found, and this only after years of patient toil and care. A. H. SECKER.

EASTER DISPLAY IN STORE OF JOHN H. DUNLOP, TORONTO, ONT.

PHILADELPHIA, PA.—Business has kept up wonderfully well since Easter. Nearly all the retail stores have been very busy with wedding decorations, and all have used large quantities of stock. All cut flowers are now coming in in excess of the demands; and, while there is not any large accumulation, prices are being cut very much in order to unload. The cool weather has helped the production of roses. American Beauty are very abundant. Carnations have greatly improved in quality the past week; there are better flowers of some varieties now than we have had all season.

Wm. J. Baker, always known in the past as a specialist for good carnatoins, has for some time and is still handling a lot of choice Bride roses. DAVID RUST.

San Francisco.

Sievers & Boland have rented the entire ground floor of the building located at 33 Post street, which they are fitting up as a salesroom and warehouse.

Canadian News

Hamilton.

Gardeners and Florists' Club.

The club met on Tuesday, the 21st inst., in the hall, James street north. There was a good turnout, including the leading members of the Horticultural Society, who were present on invitation. Roderick Cameron, of Niagara Falls, Ont., read a very fine paper on perennials. He mentioned particularly the value of these plants to florists, and the great advantages which they possess over bedding plants. In shrubs special mention was made of Daphne Mezereum, which grows wild with him. He also brought sprigs of many fine conifers, cupressus, juniperus, retinosporas, etc. They all do finely with him. Mr. Cameron is head gardener at the famous Queen Victoria Park on the Canadian side of the Niagara River, and for several years he held a position in this city. Perhaps no man in the country is in a better position to speak authoritatively upon hardy perennials. He has certainly ample opportunities for gaining a wide knowledge of them, as the park reserve extends almost all the way from Lake Ontario through to Lake Erie; a truly ideal park, running right along the river bed and tempered in Winter by the river, which rarely ever freezes. Whether it is the proximity of the water which renders so many plants hardy there, I cannot just say with certainty, but the fact remains that one may see beds of hybrid rhododendrons unprotected in Winter, and thriving specimens of laburnum and Sophora japonica—trees which there is little use in trying to Winter elsewhere in Ontario. Many perennials which, at Hamilton, seem to be killed by ice or a want of snow, are quite easily handled by Mr. Cameron. His paper was much appreciated by the members of the club.

D. C. Nixon, of Toronto, publisher of the Canadian Florist, was at the meeting. He felt sanguine that his paper was going to fill a long-felt want for the Canadian trade. He was given a hearty reception by the members. BEAVER.

Webster Bros., Plantsmen, Hamilton, Canada

TORONTO.—Business since Easter has been generally very good for the retailer. Several weddings have called for a good many flowers. The funeral of Sir Oliver Mowat, Lieutenant-Governor of Ontario, used up a large quantity. Stock is to be had generally at low prices. Lilies and lily of the valley are very plentiful; carnations are a little scarce and good ones sell freely. Roses are still good and are becoming plentiful.

Business in all lines here is booming, and although hundreds of men are coming in from Europe they are quickly picked up and put to work.

Our seedsmen report trade far away ahead of former years; the same with nurserymen, in many lines they are already sold out. There is a good demand for Spring bedding plants, at fair prices, so the growers ought to be able to get back the price of their coal. THOS. MANTON.

HAMILTON.—Business is good on the whole. There has been a very active demand for cut flowers, more than can be very well supplied. There seems to be a small surplus of Easter lilies and they are, as usual, clearing off very slowly. Lilies are poor stock to have on hand after Easter. The weather is cold and backward, but there has been very little frost. B.

Philadelphia.

Pennsylvania Horticultural Society.

There was a very fair attendance at the meeting on Tuesday last. The reports on the past Spring show were very satisfactory, and several members spoke of the good work done by the committees and judges. The prizes at the meeting on Tuesday last for hydrangeas, offered by Mr. Samuel T. Bodine, brought out some grand specimens. First prize went to Wm. Robertson, gardener to John W. Pepper, Esq. His two plants were the best ever seen here; they were four feet through, in 12-inch pots, and had from 23 to 26 blooms, all of which measured from 10 to 12 inches across. First prize for amaryllis went to John Thatcher, gardener to E. Le Boutillier, Esq. In vegetables, John McCleary, gardener to Wm. Weightman, Esq., carried off the honors with some well-grown lettuce and Zion House beans.

Several members present spoke feelingly of the sad death of James W. Withers, publisher of American Gardening, mentioning the good done by him among the gardeners, and for the welfare of horticulture.

Jottings.

Milton Woodruff did not last long as a commission man. He has already closed up.

The annual shoot of the Pennsylvania State Sportsmen's Association, which will be held here under the auspices of the Florists' Gun Club on their grounds at Wissinoming, May 18 to 23, promises to be a grand affair. Entries are already coming in.

Harry Bayersdorfer, accompanied by Mrs. Bayersdorfer, will sail for Europe on his annual purchasing trip, on May 9. DAVID RUST.

SALINA, KAN.—John Buchi, florist, died suddenly Sunday forenoon, April 12.

BALTIMORE.—The Gardeners' Club is considering the advisability of erecting an iron and glass structure for flower market purposes in connection with Lexington Market.

TOBACCO POWDER
THE BLACK STUFF FINE For Sprinkling Only.

WHEN you cannot fumigate with our Fumigating Powder you can apply our Black Stuff Fine direct to the plants; it is strong and equally effective in doors or out for extermination of all plant pests. Your money back if it is unsatisfactory. Trial 5-pound package for nothing if you will pay the express charges on it. Write Dept. B. THE H. A. STOOTHOFF CO., 116, 117, 118 West Street, New York.

English Horticultural Notes.

A NEW HARDY, WINTER-FLOWERING JASMINE.—Chief among the novelties brought into the commercial arena during the past few weeks is Messrs. J. Veitch & Sons' evergreen Chinese jasminum, specifically named primulinum, the derivation of the latter name being obvious. Undoubtedly this is one of the best hardy climbing plants of recent introduction. In a line, its merits are these: It is evergreen, hardy enough to stand 16 degrees of frost (as experienced), a quick and vigorous grower, bearing flowers 1 1-3 inches to 1¾ inches across the corolla, some of them being semi-double, and produced in satisfactory quantities. It is doubtful whether it will ever furnish the dazzling display of bright yellow blossoms that J. nudiflorum does, but established plants will soon settle that point, and we trust for the best. The shrub was sent to England from Yunnan (Southern China) by the firm's collector, E. H. Wilson, whose explorations have been so very successful. As a pot subject for the Winter garden and house decoration, the plant will take a place. It can be grown dwarf and bushy, and in character it is dark green and glossy.

PRIMULA KEWENSIS.—Probably even more to American taste is our new Primula kewensis, an A1 hybrid raised at the Royal Gardens, Kew, and offered through Messrs. J. Veitch & Sons, Ltd., Chelsea, London. No Winter-flowering primrose equals this one in floriferousness or brilliance. The inflorescences are reared a foot high, boldly held above the handsome bright green foliage, which is profuse, and their characteristic is the verticillate or whorl-arrangement of the blooms. Tier upon tier, the intense golden blossoms arise, and the wiry brown stems are elegant withal, rendering the plant exceedingly light and graceful. Being a hybrid, it does not mature seeds, and propagation is only effected by division. It is selling quickly here. Its parentage is P. floribunda and P. verticillata.

NOVELTIES IN ROSES.—A new tea rose of very great promise is Frank Cant & Co.'s (Braeswick Nursery, Colchester) Lady Roberts, named in honor of the wife of the British Commander-in-Chief. The stems are long and strong; the flowers charming in bud-state and very handsome when open, expanding evenly and well. So far, it has proved excellent for forcing. The blooms are a glowing orange-salmon color, passing off at the edges to Gloire de Dijon shade.

The new dwarf polyantha rose, Madame Levavasseur, is likely to make its mark. An award of merit was granted by the Floral Committee of the Royal Horticultural Society on the 7th inst., when a group of pot-grown plants was staged by the introducers of its famous progenitor—namely, Crimson Rambler. I refer to Charles Turner, of Slough. If one describes the new-comer as a miniature form of Crimson Rambler in all but the flowers and states, too, that there is much of the amaranth shade in the floral clusters, a good impression of it may be obtained. It grows 3 feet high, having somewhat slender shoots, moderate-sized leaves and abundance of its excellent dark flowers. F. Cant & Co. have recently shown a pale creamy polyantha—a sweet thing named Schneewittchen, after the style of the well-known White Pet; and there have been some light-hued forms of Crimson Rambler seen.

BORONIA MEGASTIGMA AUREA I may notice as a fresh form of an old and reputed fragrant greenhouse plant. The novelty bears golden, instead of dull brownish flowers, as in the type. It has been exhibited in London by Messrs. Balchin, of Hassocks.

AMARYLLIS (or Hippeastrums) are yearly gaining in general popularity and some really magnificent new-comers have been staged. The specialists are working on the lighter-colored forms with great success, but one deplores the fact that no sooner is a distinct break, or advance, recorded, than it is disposed of to the highest amateur bidder. Thus, while our nurserymen (Veitch again leading) make some good "hits," they seem to retard their own further progress, at least for a time, by at once disposing of their acquisitions. Some of the most up-to-date varieties may be named in a succeeding letter.

A NEW CLASSIFICATION OF DAFFODILS (for our leading firms are giving this popular name to the entire genus and not confining it to the trumpet section as formerly) was placed before the Narcissus Committee of the Royal Horticultural Society (London) on April 7, by Messrs. Barr & Sons, the object being to fix a stricter code than has lately been recognized, and one, at the same time, that meets present requirements. The sections are fairly distinguishable so far, but there is a need for this well-considered new classification, and it is the project of very experienced cultivators. Peter Barr, V. M. H., head of the firm till he relinquished the business to his three sons, is the reputed "Daffodil King." HARRISON VAN-DYKE.

Lilies in Bermuda.

Our illustration represents a field of lilies in Bermuda, on the grounds of Chas. A. V. Frith, Hamilton, who has upward of eight acres of these bulbs under cultivation.

Mr. Frith is on a visit to the United States. In conversation he advises us that he is carefully selecting his bulbs, going through his fields annually and eliminating all that show signs of disease or are otherwise undesirable, as these defects become apparent in the growing plants and before the crop is harvested. In a recent communication he gives the following pertinent hint:

"I notice in your valued paper some complaints about the Bermuda stock. I think this is owing to the fact that your florists buy their stock from a dealer instead of a responsible grower direct. Some of these dealers buy from the small irresponsible growers who pack everything, regardless alike of its fitness for market and of the effect that this system produces on the future marketable value of the article."

A FIELD OF LILIES IN BERMUDA.
Grower, Chas. A. V. Frith, Hamilton.

Notes About the World's Fair.

Professor D. A. Brodie, late of the Western Washington Experimental Station, is superintending the work of installing the open air exhibit by the Bureau of Plant Industry of the U. S. Department of Agriculture at the Louisiana Purchase Exposition. This exhibit covers five acres of ground and its central feature is a mammoth map of the United States shown by the principal crops grown in each of the States. The work will occupy Mr. Brodie's entire time until the close of the World's Fair in December, 1904.

The New Bedford (Mass.) Horticultural Society, recently organized, is planning to hold a flower show next Fall. The following committee has been appointed to make preparations for the exhibition: Messrs. William S. Brown, S. J. Donaghy, William Smith, George N. Borden and J. C. McNutt.

QUESTION BOX

PLANTS FOR NAME.—J. Was No. 1, Anthurium Scherzerianum; 2, Iresine Herbstii, commonly ca Achyranthes; No. 3, Peperomia Sa dersii; No. 4, Acalypha Macfeea No. 5, Euonymus japonicus aureo-m ginalis; No. 6, Abutilon vexillariu Bernardsville—Santolina incana.

Soil for Carnations.

(90) Of what, and how do you pare soil for carnations. V.

—Get the top soil of an old past pile it in a convenient place near greenhouses, adding one-sixth rotted manure. Turn over the pile casionally so that the soil and mar will become thoroughly incorpora The sooner the soil is prepared the ter it will be. We prefer to make soil pile in the Fall for next Summ use.

Asters.

(91) What are the best early as for cut flowers? I want to plant in greenhouse after carnations. How I best keep away the aster bug f plants grown outside? E. S.

—There are several varieties branching asters that are all good cut flower purposes. Consult an the seedsmen's lists, and you will what you want. White and pink k are the best sellers.

Have the plants perfectly free black fly when they are planted Give them an occasional dusting tobacco powder while they are g ing, and never let the fly get a st

Asters for Pot Culture.

(97) How are asters managed pot plants to sell in the latter pa the Summer and Autumn? Are potted at once when large enougl grown in the ground and potted l and if potted, how are they kept- der shaded glass or plunged out My plants are pricked off into and are from two to three inches April 9. L. B.

—The asters will be better if g in pots. Instead of growing them der shaded glass, give them all light possible. When growing wea arrives place them out-doors; when the pots get filled with roots mence to feed the plants with li manure.

Perennial Phlox from Cuttings.

(92) I expect to pinch back beds of perennial phlox about the dle of May, to make them branch and would like to use the tips for tings. Will they need bottom hea strike then, or will they do better side in a cold frame? B.

—The cuttings of the perennial taken in May will root readily in cold frames; bottom heat is unn sary.

White Grubs in Rose Soil.

(93) J. R.—The white grub is larva of the May beetle, and bel to the genus Lachnosterna. If the nure has been put on the benches mulch, it should be removed as soo possible. A free use of fresh sl lime on the benches might help to the roses, though usually when a b of soil gets so badly infested as i soil in this case, the plants hav great chance. Seeing that the are but newly planted, why not them out and put them into flats, porarily; then take out the soil sterilize it? If no steam is obtai to heat up the soil, build a wood out-doors, under any kind of ol roofing, and bake the soil on the That is the only sure method of rid the soil of the larva at this time o year.

Freesias.

(94) How long shall I leave fr bulbs in the soil after they are r VIRID

—The bulbs can be cleaned stored away in some dry place time after they are thoroughly rip

Scale on Palms and Ferns.

(95) Viridis.--Get one of the tobacco nsecticides and apply it with a syr-nge, or one of the fine automatic spray pumps. Any of the seed houses can supply the latter.

A Succession of Lilies.

(96) I am told that lilies can be se-ected to give continuous bloom for at least two months, none of them being wild. A. R.

—It is hardly likely that a bed of ilies will continue in bloom for two nonths, though perhaps by selecting several varieties of the hardy lilies and planting them together, some will flow-r earlier than others and so prolong he blooming season. A list of the va-ieties can be found in any of the seedsmen's catalogues.

Moss.

(98) A. B.—The sample of moss sent for inspection would not be of much use to florists, except for packing purposes, as it is in a too advanced stage of decay.

Soil for Vegetables.

(99) Please give me directions for making the best soil for the production of vegetables such as cucumbers, toma-oes, beans, radishes, lettuce, etc., in a greenhouse. Is leaf mold beneficial? A. V. D.

—In selecting soil for the cultivation of vegetables under glass, we would not recommend the use of leaf soil. Take the four or five inches of top soil from any good grass land, including the sod, lay it up in a pile, adding one-ifth its bulk in stable manure. If it is desired to use the soil at once, the sod can be omitted and piled up for future use.

Fuchsias

(100) Can you tell us what is the matter with our fuchsias? The leaves roll and twist as per sample. They are the Storm King variety. We have some common kinds alongside of them that are not affected at all. W. & N.

—The Storm King fuchsia is not as free a grower as many of the common kinds, and we think the trouble arises from the plants being over-potted—hat is, having been put in larger pots han were necessary, and the soil becoming soured by too frequent appli-ations of water.

CARNATIONS ROOTED CUTTINGS

The fact that we are rooting 90 per cent. shows quality of our stock.

Ready for Delivery May 10

The American Carnation — How To Grow It

A Standard Work Written by Request of the Publishers of the Florists' Exchange.

By C. W. WARD

THE CARNATION in America has reached a status and importance in the flori industry possessed by no other flower of modern times, and a practical work on subject of the cultivation of the plant has become an urgent necessity. This wan fully and completely met in the present volume, which furnishes the results of years of act experience of the author, who is recognized as being among the foremost of carnationist America. The scope of the book will be gleaned from the subjoined table of contents:

History and Development of the Carnation—The Carnation in America—The Commerc Importance of the Carnation Industry—The American Carnation Society—Use of Carnati as a Decorative Flower—General Greenhouse Culture—Soils—Manure and Fertilizers—Pro gation and Shipping of Young Stock—Treatment of Young Stock preparatory to Plant Out—Field Culture—Lifting and Planting Carnations from the Field—Treatment a Benching—Picking, Packing and Shipping Carnation Flowers—Insects and Preventive Diseases and Injuries—Packing and Shipping Field-grown Plants—Forcing Houses for C nations—Bench Construction—Sub-irrigation—Heating Carnation Houses—Carnations Summer blooming—Bedding and Hardy Carnations—Carnations for Pot Culture—Rai Carnations from Seed—Cross breeding and Fertilizing—Varieties—Sports and Variati —The Ideal Carnation—Traits and Peculiarities—Various Classifications of the Carnatio List of Varieties for Different Localities—The Future of the Carnation—Its Commer aspect and Prices—Who shall engage in Carnation Growing—Does it Pay to do things We Calendar of Operations—Carnations in California, Canada, in the West, the East, the Sou

It will at once be seen that a work of this nature should be in the hands of every flo and others interested in the subject who desire to keep abreast of the times, and to m the growing of carnations, by the most modern methods, a profitable part of their busin

The Book is profusely illustrated by original engravings from life made specially this work, with four colored plates. Handsomely printed from large, clear type on enameled paper. Quarto, cloth. Price, $3.50.

Boston.

News of the Week.

The regular monthly meeting of the Horticultural Club was held Thursday evening, James H. Morton presiding. The members of the "Old Guard" celebrated Patriots' Day (Monday) in a patriotic way at the Quincy House as guests of Captain Edward Hatch.

Jack Edgar's many friends will learn with regret of the death of his wife, which occurred last week.

Henry Cartwright, of Wellesley, is bringing in some very fine frame lily of the valley.

This week at the flower market the signs bearing this legend, "This is a wholesale market. no flowers sold at retail," are conspicuously displayed both in the windows and inside on the stalls. This is a good move, and the more conspicuous the signs are made the better.

J. Bryant, of St. Albans, Vt., passed through Boston this week bound for Europe. F. J. N.

Providence, R. I.

Club News.

The Florists' Club met on the 16th and had a lively evening. Mr. Sweeney started things agoing by referring to the recent unfortunate Winter-killed California privet, and the subject was taken up quite spiritedly, Mr. Canning giving as his opinion that the trouble had been caused by the moving sap becoming killed and frozen by the sudden zero weather of December 6. A great many fine hedges of this privet have suffered locally, especially at the estates of Senator Aldrich and J. A. Foster.

Jottings.

T. J. Johnston has added a long-distance telephone equipment to his office.

Mr. Leach, of Pawtucket, was in town last week and paid his respects to the florists who drum up the "dead." Next to the grower who sells "on the quiet" there ranks the "crepe pulling" retailer.

The weather has been too cool for much business in pansies and bedding plants.

A big cut of carnations is in sight, but it may not last till Memorial Day.

A Syracuse (N. Y.) special says they retailed carnations at Easter for nothing less than $2.00 per dozen. This is not likely to happen here.

Pierson, of Cromwell, is supplying grafted rose stock to Budlong & Sons.

It's strange why the wholesaler thinks more of a retail order at $1.00 than he does of a $5.00 wholesale one.

The trade had better investigate and find out regarding the probable abandonment of special exercises and flowers at the coming school closings. C. S. M.

Cincinnati.

The News.

One of the prettiest sights we have seen in a long time was the tulip display in the city parks, where over forty-five thousand were in full bloom. The blending of the colors was very beautiful. The new cement-constructed greenhouse in Eden Park is well worth a trip to see, and is quite a revelation in greenhouse building. The glass is butted and laid on Critchell's rubber patent, doing away with putty entirely, making the house perfectly tight and causing less breakage from the elements.

The best piece of news that it is my pleasure to report is the coming marriage of our esteemed friend, Richard Witterstætter. The happy event will occur the first week in May. It is needless to say that the craft throughout the United States will join me in the heartiest congratulations.

Saturday evening, according to the schedule, was the meeting night of the Cincinnati Florists' Society, but not a member showed up. It seems a very hard matter to get the members interested in the meetings. There will be a called meeting of the Board of Directors, Friday afternoon, at the office of E. G. Gillett, to formulate rules for the display to be held at Music Hall in September in connection with the annual Fall festival. The Fall Festival Association has offered the sum of $1,000 to be competed for. The annual outing of the Cincinnati florists will also be discussed at this meeting. E. G. GILLETT.

Marquette, Mich.

Max Rasmussen, for several years florist at the Negaunee greenhouses, has received the appointment of landscape gardener for the Cleveland-Cliffs Iron Company, in which position he will superintend the greenhouses and nursery, and will have charge of all the planting improvements for the company at its various residences, offices, depots, etc., and the planting of the public park now being laid out at Munising. Mr. Rasmussen will also give advice on planting to the general public free of charge.

Milwaukee.

News Notes.

At the regular club meeting, on Tuesday last, important convention matters were taken up, and the various committees appointed will be kept busy until convention time.

Some building will be done this Summer. Chas. Burmeister will erect one house for carnations. C. Johansen will also add one house for carnations. C. Kitzerow and H. Schwelke will add some glass. C. C. Pollworth Company is erecting three houses, each 256x22 feet, which will be devoted to roses. This firm will also move into larger quarters downtown May 1. C. C. P.

Los Angeles, Cal.

J. H. Replow, of Chicago, representing E. W. Chalmers, of Philadelphia, has been inspecting lands contiguous to Santa Monica, with a view to acquiring a forty-acre tract on which to grow rose plants for the trade.

St. Louis.

ub Meeting.

The St. Louis Florists' Club held April meeting at Belleville, Ill., by vitation of the Mayor of that city. e attendance was not very large, but ose present had a good time The uncil chamber of the City Hall, in ich the meeting was held, was tastelly decorated by the local florists This being the annual rose meeting, e St. Clair Floral Co., of Belleville, J. Fillmore E Schray, and R. F. sson made exhibits of roses and rnations. C. C. Sanders, of St. Louis, owed a fine lot of fringed double tunias.

The meeting opened with an address welcome by the Mayor, who is a ember of our club. It was responded by President J. W. Dunford. J. J. neke, the chairman of the entertaint committee, reported that everying was in readiness to entertain the hicago florists when they come. Prof. C. Irish announced, by letter, that alter Gilles had been accepted as a pil of the Shaw Garden. Mr. Gilles s recommended by the club at its st meeting. His term will begin April Mr. Gilles was elected to memberhip, as was D. R. McAnally. A comittee, consisting of Messrs. Ellis, oenig and Guy was appointed to dge the roses on exhibition. The first ize was awarded the St. Clair Floral o. for a vase of 25 Kaiserin Augusta ictoria; second to F. J. Fillmore for vase of mixed roses in which were ride, Bridesmaid, Souvenir de Wooton and Perle des Jardins; the third rize was given to Emil Schray for a ase of 25 good mixed roses. Comments were made on a vase of Queen f Edgely and American Beauty roses nd three vases of carnations of G. I. Crane. The Marquis and Bon lomme Richard from the St. Clair loral Co., also on the box of fringed ouble petunias from Mr. Sanders. Ir. Tesson's roses arrived too late to e passed upon.

No essays were read, but Mr. Fillnore promised to read one at the May neeting on "Hard and Soft Coal Heating." The question box brought out ome interesting discussion.

At the close of the business meeting he Mayor announced that an elegant unch was in waiting at the bowling lley across the way. This was thoroughly enjoyed. Speeches were made y President Dunford, Carew Sanders nd Mayor Halstedt. F. M. Ellis and . J. Beneke got up two teams and owled one game, the Beneke team vinning by over a hundred pins. All ad a good time, many thanks to the Mayor of the city of Belleville.

ews About Town

We learn that the St. Clair Floral o., of which Dr. A. S. Halstedt is resident, has purchased the greenouses formerly owned by Wm. Hucke, t Belleville. The company will grow oses and carnations for the St. Louis market.

Fred Ammann, of Edwardsville, is utting some of the best American eauty that come to this market. Fred s very busy just now, as he is a candiate for Mayor of Edwardsville. This ct kept him from the meeting at Belleville, so Mr. Bolixen, his foreman, ays. Mayor Ammann sounds well.

A. Berdan's place in Kirkwood has een sold to W. J. Pilcher, who intends o build two new houses this Summer or carnations. Heretofore Mr. Pilcher grew nothing but violets, which were among the best in this market.

Dr. A. S. Halstedt and son spent a few days of last week in Chicago buying cuttings for their new place.

S. S. Skildesky, of Philadelphia is with us this week selling anything in the florist line. He is very popular with the growers and retailers here.

L. Baumann of Richter & Baumann, Chicago, is a visitor calling on the trade with a full line of samples of florists' supplies.

F. W. Windt, who has been sick for some time, is reported much better, and will soon be able to attend to business again. ST. PATRICK.

Chicago.

Jottings.

A. H. Kohlbrand, of Amling's and Geo. Piepgras, of Benthey's, are on the sick list.

Edgar Sanders is now able to be outside in good weather, and spends a few hours in the open every fine day

A. L. Randall is preparing to vacate his present quarters May 1, and will occupy the building at 19 to 21 Randolph street.

F. Bon has one house nearly finished and contemplates the erection of another and the remodeling of his present range. The installation of a new boiler is included in his improvements.

T. Rogers, of Sinner Bros., has gone on a visit to his home in Grand Rapids, Mich., for a week.

ROBERT JOHNSTONE.

Louisville, Ky.

A Hail Storm.

Sunday afternoon, April 19, Louisville and vicinity were visited by a severe rain and hail storm—one of the most destructive ever known in this locality. The florists and gardeners suffered heavily. A peculiarity of the damage done was that those florists whose establishments were within the city proper sustained comparatively little, while those in the suburbs suffered heavily. Henry Nanz, of Nanz & Neuner, whose greenhouses are at St. Mathew, Ky., estimates his loss on glass at $700.00, and damage to plants at $600.00. His was all double strength glass. The north side of the houses suffered the greatest damage. The firm carried no hail insurance.

C. W. Reimers, of Crescent Hill, Ky., was also a heavy sufferer. He estimates his loss on glass at $500.00. The damage to plants he could not estimate. His was also double strength glass, and he carried no hail insurance.

A. Rasmussen, of New Albany, Ind., estimates his loss on glass at $300.00, with no insurance, but states that his application for insurance is already on the way to the Hail Association. His loss was nearly all in single strength glass.

The houses of John G. Bettman & Sons, of New Albany, were also damaged to the extent of about $300.00 in glass. Oscar Trinler, also of New Albany, sets his loss at $100.00, while F. Walker & Co. place theirs at $50.00.

In Jeffersonville, Ind., much damage was done, the heaviest loser being Jos. Mollock and the Indiana Reformatory.

The market gardeners near the city were also heavy losers, not only in damage to their glass, but also in that done to early stock planted in the open.

GLASS
BARS FASTNED WITH SCREW THRO LUG WHERE THERE IS NO MOISTURE
LUG
BAR
LUG UNDER EACH BAR TO SUIT GLASS AND PITCH OF ROOF

FOLEY
CAST IRON
GUTTER

This cut is not full size.
We make two sizes:
2⅞x5 inches and 2⅞x6½ inches, inside measurement of waterway.

No rotting at the ends of bars. The end wood is not punctured. Bars always have perfect bearing, and the drip falls free into drip conductor.

Your bars will last five years longer than on old style gutters. The lugs through which the screw fastens the bar are cast on the gutter.

New Bedford, Mass.

We can now boast of two societies devoted to horticulture here—one the Horticultural Society, open to all who desire to join; the other the Florists' Club, confined to florists and their employees. But there may be an amendment to the by-laws allowing the admission to the club of professional private gardeners (not coachmen), which, in the writer's opinion, would be an improvement and of benefit to the members.

Richard Nafty intends spending the coming Summer in Germany. There are others that would like to join him, but——

Chas. S. Cooper, of Brockton, was a visitor recently. X. Y. Z.

New Haven, Conn.

The New Haven County Horticultural Society held its semi-monthly meeting on the 7th inst., there being a large attendance. The board of managers notified the members that the prize list for the flower show to be held this Fall was in the hands of the printer, and would be distributed soon. Mr. Murray, of the Yale Botanical Gardens, exhibited a well-grown plant of antirrhinum Queen of The North. Such a specimen as Mr. Murray exhibited should be a good plant for the florists' Easter trade. Wm. M. Gardner received his certificate of merit which was awarded at a previous meeting for his white seedling carnation Bicentennial. W. M. G.

Plate 51

MAGNOLIA SOULANGEANA

Flowers in April. Wherever hardy, which is practically over the whole of our country, omitting the extreme North, it is the chief ornament of the lawn at that season, beautifying the surroundings, and giving pleasure to thousands who see it.

THE FLORISTS' EXCHANGE

We are a straight shoot and aim to grow into a vigorous plant

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

Vol. XV. No. 18 NEW YORK, MAY 2, 1903 One Dollar Per Year

HYBRID PERPETUAL ROSES

Extra strong, field-grown plants; a large variety embracing the following choice sorts: Comtesse Julie de Schulenburg, Magna Charta, Mme. Caroline Testout, Mrs. John Laing, Ulrich Brunner, Baron Haussman, Victor Verdier, Perle des Blanches, Captain Christy, Mme. Gabriel Luizet, Chapeau de Napoleon (crested moss), Blanch Moreau (white moss), Baroness de Rothschild, etc., $12.00 per 100.

RHODODENDRONS.

Large flowering hybrids of Catawbiense, the best hardy ironclad tested sorts, splendid plants, well budded, 1½ ft. high, $75.00 per 100. Large specimens from 2 ft. high, $18.00 per doz.

HARDY AZALEAS.

Azalea Mollis, extra fine plants covered with buds, 15 to 18 inches high, $30.00 per 100.

Ghent Azaleas, extra fine plants, named varieties, covered with flower buds, about 18 inches high, $45.00 per 100.

CLEMATIS.

Extra heavy, fine pot-grown stock, Jackmanni, Henryii, Lilacena Floribunda, $3.50 per dozen.

BOXWOOD.

We offer a large extra fine stock of this.

Pyramid, 3½ ft. high, $2.00 each; 4½ to 5 ft. high, $3.00 each.

Large bushes, untrimmed, fine for vasework, or for other decorative purposes, about 3½ ft. high, $2.00 each.

Standard, fine heads, about 1½ ft. in diameter, $2.00 each; extra size about 2 ft. in diameter, $3.00 each.

	Per 100
Delphinium (Larkspur), Double Giant Hybrids, strong blooming plants from ground	$8.00
Hollyhocks, Superb Double, in separate colors and Allegheny, all colors mixed, strong plants from ground	8.00
Shasta Daisies, strong plants from ground	12.00
Tritoma Pfitzeri	12.00
Hardy Phloxes, a grand assortment of the very choicest sorts	6.00
Japan Lilies, Auratum, Roseum, Rubrum, Album and Melpomene	5.00
Japanese Fern Balls, large size, extra quality	25.00
Caladium Esculentum— Fine bulbs, 6 to 9 ins. circumference	3.00
" 9 " 12 " "	6.00
Dielytra Spectabilis	8.00
Pansies, very finest strain, large-flowered, in full bloom	3.00
English Daisies, white and pink, in flower	3.00
Ampelopsis Veitchii, extra heavy, field-grown stocks	16.00
Dahlias, dry roots, Cactus, large-flowering, etc., finest named	8.00
Poppies (Oriental), in pots	8.00

On account of lateness of season, stocks are being reduced rapidly and it is possible we may be out of some of the above-named sorts. In ordering, kindly state whether we can substitute other equally good sorts if we should be sold out of the kind specified, or, better still, leave selection to us and we will furnish a first-class assortment of varieties, including the above-named kinds and also quite a number of other kinds of which we do not have enough stock to offer specially.

BOOKS RECEIVED.

INSECTS INJURIOUS TO ROSES: Their Prevention and Eradication. By Friedrich Richter von Binnenthal. Illustrated by Reichert. Publisher: Eugen Ulmer, Stuttgart, Germany. Paper.

This is a book of 400 pages printed in the German language. It treats exhaustively on the history and destructive habits of all insects that attack the rose; also furnishes formulæ of agencies for their prevention and eradication. Numerous illustrations render easy the identification of the various pests, showing as well the nature of their ravages.

ASTER COSMOS PANSY SALVIA ZINNIA

BEANS CLOVER GRASS ONIONS PARSNIP

SEED TRADE REPORT

AMERICAN SEED TRADE ASSOCIATION

Walter P. Stokes, Philadelphia, President; C. N. Page, Des Moines, Iowa, Vice-President; C. S. Burge, Toledo, Ohio, Second Vice-President; S. F. Willard, Wethersfield, Conn., Secretary and Treasurer; A. N. Clark, Milford, Conn., Assistant Secretary.

SHEBOYGAN, Wis.—Representatives of the Allen Seed Company, of Three Mile Bay, N. Y., recently visited this vicinity looking for a suitable site for a warehouse to have a capacity of 100,000 bushels of seed beans and peas.

Sixty thousand acres is a conservative estimate of the breadth planted to Lima beans this season in California. Not all for seed purposes, of course, although that is quite an item—possibly 20 per cent. The liberal rainfall and existing conditions give promise of abundant yield. Seed beans other than Limas are receiving considerable attention, and it looks as if Michigan will have an able-bodied competitor before very long.

The San Joaquin River flooded sixty acres of onion set for seed, completely destroying the crop, causing irremediable loss.

New crop smilax seed will probably command high prices. Late frosts injured and in many cases completely destroyed what was a promising outlook.

European Notes.

The cold breath of Winter, which a week ago had been almost forgotten, has come back very bitterly to blast our best hopes. Almost everything had managed so far to go ahead steadily and give promise of abundant crops. The warm, wet weather had brought a little rottenness into the root crops, such as turnips, beets, etc., especially where the roots had been nipped by the stiff Autumn frosts; but, generally, all seed crops were growing away strong and well, and it is this very fact which is causing dismay among the growers to-day.

The cold wave has come so suddenly upon us that it is impossible yet to give any accurate idea of what damage is done; and, moreover, the frosts and snow still continue, and the damage, also. Certainly the cabbage and turnip crops in England must suffer considerably; early blooms will surely be cut off, and thus a fair percentage of the crop lost. There has been very little snow in the growing districts of England, but many degrees of frost and a biting cold wind are doing deadly work. Early peas, those that have made a fair amount of vine, are being quite withered by the cold.

Germany has had snow in large quantities, and many fears are felt for the safety of their biennials, which had got quite a start in the warmer weather, and have thus prepared themselves to suffer from the attack of frost and cold.

In France it is quite as bad, and there can be no doubt but that quite a large acreage of the beet crop must be destroyed. A goodly number of the roots had been damaged, either in the Autumn or by the early Spring frosts, and it seems as if their last chance had been ruined by this unfavorable change. Carrots, also, are suffering, but until better times return it is a practical impossibility to state what actual amount of damage has been done.

The unusual weather is having some remarkable effects on early flowering plants, especially bulbous varieties, and many complaints are reaching merchants for which nothing but the unseasonable times are responsible.

Trade, on the whole, has been fairly good, most agricultural seeds being in demand. Red clover maintains good prices, and stocks are running low. Grasses need pushing to make sales. Sainfoin is sought after, as are alsike and white clover. Others show no particular feature.

Since writing the above report I am in receipt of a letter from a large growing center in England saying that the turnip crops are practically cut down by the frost, the heads drooping and black. This may mean a very great loss; or, should warmer weather arrive soon, the plants may send out new shoots in profusion from the base of the stem and produce, though later, an even better yield than had been estimated.

Nursery Department

AMERICAN ASSOCIATION OF NURSERYMEN

Charles A. Ilgenfritz, Monroe, Mich., President, D. S. Lake, Shenandoah, Ia., Vice-President, George C. Seager, Rochester, N. Y., Secretary, C. L. Yates, Rochester, N. Y., Treasurer

American Association of Nurserymen.

This association holds its twenty-seventh annual convention at Detroit on June 10, 11, and 12, 1903. A rate of one full fare going and one-third returning, on the certificate plan, has been granted by the railroads. The Hotel Cadillac will be headquarters. Secretary George C. Seager, of Rochester, N. Y., has issued a preliminary program of the proceedings. Among the subjects to be discussed by the delegates are the following:

Professor L. H. Bailey—"The Whole Question of Varieties."

J. H. Hale—"The Relation Between the Nurseryman and the Commercial Fruit Grower." Discussion by Howard A. Chase, H. W. Collingwood, J. M. Irvine.

Frank B. White—"Publicity for Nurserymen." Discussion by R. T. Olcott, J. M. Irvine, L. H. Bailey, J. H McFarland, H. W. Collingwood.

F. W. Taylor—"What the Louisiana Purchase Exposition Offers to Nurserymen."

H. W. Collingwood—"The Nurseryman as the Editor Sees Him."

William Pitkin—"Insurance for Nurserymen." Discussion by George C. Perkins, E. Albertson, D. S. Lake.

Howard A. Chase—"The Agency Business—Its Importance to the Nursery Interests, and the Dangers that Beset It." Discussion by C. L. Watrous, Howard Davis.

G. L. Taber—"The Nursery Interests of the South." Discussion by R. C. Berckmans, N. W. Hale, W. F. Heikes.

E. W. Kirkpatrick—"The Nurseryman's Work in Texas."

George A. Sweet—"The Cost of a Tree." Discussion by Herbert S. Chase, Orlando Harrison, W. F. Heikes, William Pitkin.

All above arranged for. Subjects yet to be tried for are as follows:

Thomas B. Meehan—"Growing Ornamental Nursery Stock as a Business."

Professor John B. Smith—"Spraying and Fumigation for Nurserymen up-to-date."

Notes.

Many of the so-called Summer spiræas flower profusely in late Summer if cut well down at this time. The Douglasii, tomentosa, Bumalda and Anthony Waterer are of this class. They want abundant moisture through the Summer, then the display of flowers is large.

Dolichos japonicus, the kudzu vine, of renowned rapid growth, flowers in September. The dark pink blossoms are in short racemes, some six inches in length, and have an agreeable odor. It is the vine to plant where great space is to be covered.

Magnolia grandiflora is not so renowned for its flowers as are those of the Chinese section, though its large white blooms are very beautiful. Its fame comes chiefly from its large, carmine-colored seed pods, in August and September.

This is the season of the year to take yucca roots, cut them up and set them out for the increase of stock. With sorts that never seed with us, such as the gloriosa and recurva, it is the only way to increase them.

Douglas' golden juniper is a lovely evergreen at this season, as its new growth is being made, as are all golden foliaged evergreens. It is a variety of our common juniper, J. communis.

Clerodendron trichotomum is a lovely Summer-flowering shrub, entirely hardy in the vicinity of Philadelphia; blooming in August and September. The flowers are cream colored, with pink calyx, arranged in a somewhat flat cluster.

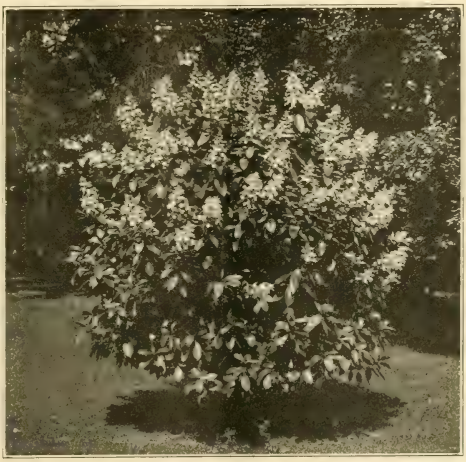
Elm and silver and red maple seeds are ripening now. The sooner they are sown after being gathered, the better the results, always, as good plants are made by Fall.

Nurserymen are experiencing calls for stock from South Africa. As a hint for shipping, the seasons there are about the opposite of ours. The Summers are hot and dry.

Activity in the Nursery Business.

From all parts of the country come reports of a lively business from nurserymen. One and all say trade is fully up to that of last Spring, which was thought to have been uncommonly good. There seems no specialty worthy of particular mention. For the cheapest article as well as the most expensive one, orders come. Fruit trees were in great demand not only by farmers but by those who appeared to be replanting old orchards and setting out new ones. Purchases of the latter class invariably call for large trees. They want trees of a bearing size. Near cities, large fruit trees sell, where it would be hard to dispose of them to those in the country. The producing of large transplanted fruit trees is something which has been neglected, but which will pay to follow.

The call for evergreens has been great, but it has been met better than it was last year; and the stock has been very good. Old stock was got rid of last season; what little had not been sold before, and what is now in nurseries, is nice, thrifty, young material, in fine condition for transplanting. The weather having been favorable for tree growth, on the whole, it is thought complaints of trees dying will be but few.



HYDRANGEA PANICULATA

In addition to the various ways of increasing stock, such as layering, cutting, grafting and budding, there is that of seed sowing; and now is the time to attend to this work. Those most successful in the line of seed sowing take advantage of the first chance in Spring to get the seeds into the ground. The earlier, the better they do, without doubt. Many sorts are sown in the Fall, and such as were, should now be above ground. It is still in good season to sow evergreen seeds, though a little earlier would have been better.

These notes on seed sowing are hardly germane to the subject of the activity in the nursery business, but the prospects of continued calls for stock suggested a few lines on how to meet them.

Hydrangea Otaksa.

The Hydrangea otaksa, of which it was said when first sent out, it would prove hardier than H. Hortensia, has not sustained its good name. With us it behaves in Winter just the same as does H. Hortensia, maintaining its branches uninjured when in protected, sheltered places, and partly losing them when exposed. In fact, all the forms of H. Hortensia behave as it does. Unprotected they may be partly or wholly injured to the ground, in which case no flowers come, or but few. The Winter just over leaves a large bush of my own killed half way to the ground. It had no protection at all, but few flowers may be expected. Had it been covered with sawdust it would have been preserved to its points, and many heads of flowers would have resulted.

Budded Lilacs.

In order to increase the newer varieties of lilacs rapidly, nurserymen bud them on the California privet. This gives perhaps fifty times as many as could be raised by layering in the same time. As many persons prefer that their lilacs should not be over large, the privet stock furnishes what is wanted, the lilac not growing as robust on it as when on its own roots. There is a tendency in the privet stock to throw up shoots from the base, as a Manetti rose will do, and this is an objection, though one not formidable. By cutting out all the eyes of the stock before planting, it ends the trouble. It can be met in another way—by planting the bushes deep enough that the stock is well underground. Very rarely is there any shoot from it then.

It is sometimes desired that the lilacs be on their own roots instead of on the privet, even though budded on this stock. This can be accomplished by deep planting. Set the plants so that the true lilac shoots are several inches under ground, and in the course of time roots will emerge from the lilac, just as often occurs with dwarf pears. Should anyone have plants already planted, dig them up and set them lower. It is the only way, unless practicable to mound soil about them. No doubt a little slit cut into the lilac wood, just as would be done if about to layer it, would cause roots to form quickly.

Late Transplantings of Trees and Shrubs.

Try as they will, nurserymen always fine some stock to be transplanted late instead of at its proper time. It may be bought-in stock or some home-grown which it has been impossible to plant earlier. There are many trees and shrubs much the better for being cut down at planting, even when set out early, and with these there will be but little lost by the lateness of planting. In the case of both trees and shrubs, there are many the better for being cut back, and some which should not be so treated. It takes much practical experience to know which will push up strongly from the base and which will not.

Among trees, the greater number may be cut down. The magnolia, tulip tree, poplar, ash, linden, catalpa, plane and maple are examples of those which will shoot up nicely when cut back. The elm, Kentucky coffee, oak, beech, persimmon, sour gum and hickory are representatives of some which had better be let alone, as the shoots that follow a cutting back are apt to be of a branched nature instead of a straight, upright one as desired.

Shrubs, being desired in bush form, may be cut back with impunity. In fact, having in mind that these notes refer to late plantings, the shrubs should be cut down, or, being in leaf, wholly or partly, they may die outright if not cut back.

These cut back shrubs make grand ones for retailing by Fall. Bushy from the base, they are just what customers want—not overgrown, heavy stock, but bushy and young.

Nurserymen who raise much of their own stock of shrubbery from cuttings set out in Spring, can, in many cases, make the plants which follow from the cuttings something more than a single shoot, by going over them in Midsummer, when in the height of growth, and pinching off the tips of the shoots. In the case of weigelias, spiræas, and other shrubs which branch easily, I have known fair salable plants result from such cuttings by Fall.

Privet Winter-Killed.

I have not as yet noticed anything in your paper in regard to the loss of privets in this section. About all in this city (whether old or young hedges) have been killed to the ground; in Newport practically the same thing happened. Have you ever heard of this occurring before? Or have you any knowledge of the cause? So far as my experience goes it has never happened here before.

C. V. S. R.

Fall River, Mass.

In the vicinity of Philadelphia I have heard of no losses of privet, but a nurseryman some few miles from here reports a block of two-year plants killed to the ground, while another block of similar plants in a different position, was entirely unharmed. A few years ago lots of privet hedges hereabouts suffered, the first and only time that I know of. It is difficult to name the exact cause. There may be many causes. A wet Autumn, creating late growth and unripened wood, will often result in loss of plants. A very dry Winter, with less moisture in the soil than the plants actually require, accompanied with severe cold, will cause loss of plants. Three winters back trees and shrubs of all kinds were terribly hurt here from the latter cause hard freezing and dry ground.

Without knowing the exact conditions of the past Winter with you, I incline to think your plants made a late growth, and, consequently, had unripened wood. It's a consolation to know that the privet is often greatly benefited by being cut to the ground. Let us hope it may prove true, in the cases you have mentioned.

Hydrangea Paniculata.

It is not as well known as it should be that Hydrangea paniculata is a very different shrub from H. paniculata grandiflora. The latter is the common hardy hydrangea, found now in almost every garden, as it deserves to be; while the H. paniculata, the one the picture represents, is a very different shrub in appearance from H. paniculata grandiflora, as will be admitted by all. The H. paniculata is the typical one, while H. grandiflora is a variety. It will be recognized that in ordering from nurserymen care should be taken to write distinctly which is required. Many customers are careless in this respect and write but paniculata when they mean grandiflora.

The heads of flowers on H. paniculata are comparatively light while those of H. p. grandiflora are so heavy as to weight down the branches. It is the upright position of the inflorescence of H. paniculata that characterizes it and which causes it to be thought by many as valuable as the grandiflora with its heavy heads of white flowers. No one will deny its beauty, as displayed in the illustration.

It is propagated by soft wood cuttings placed in the greenhouse in Summer, or by hard wood ones, cut in Winter and planted out in Spring; or by layers of the young wood in Midsummer, rooting under any of these systems as readily as does the other sort spoken of.

Providence, R. I.

Jottings of Interest.

Messrs. Nichols and Forbes were recent recipients of brand new children.

Fancy and dagger ferns are almost gone, and it will require hustling to secure a stock of them for Memorial Day.

Mrs. Bellows, formerly with T. J. Johnston, is open for engagement at present.

Covill and Seymour, of Warren, are ready with a nice cut of sweet peas.

It is learned from reliable sources that the present public school session will terminate as usual, but that next year there may be a change, inasmuch as the leading grammar schools will unite in having one set of exercises at Infantry Hall, thus dispensing with the individual school closings. This would doubtless cause a diminished use of flowers.

The question of early closing and half holidays is arresting the attention of the trade.

W. B. Hazard is renovating his store and papering the ceiling.

"THRIPSCIDE"

(REGISTERED)

GREENHOUSE FUMIGATING POWDER

is the newest and best article on the market to day for the complete destruction of all insects that infest Greenhouses or Conservatories, being a special boon to Rose and Beauty growers and prepared particularly for the destruction of **Green Fly** and **Thrips.** There is nothing injurious in it to plant life, even the most delicate fern. It is especially recommended for Beauties, Roses, Carnations, Chrysanthemums, Lilies, Smilax, Asparagus, Palms, Ferns, etc., and we claim that insects will be entirely eradicated when the houses are thoroughly fumigated with this powder. It is put up as follows:

1 lb. Tin Can	$0.25	25 lb. Sealed Box	$4.50
5 " "	1.00	100 " " "	16.50

BRIEFS FOR BUSY FLORISTS.

GLADIOLUS.—While the cut flowers of gladiolus can be bought cheaply, in their season, from the large growers, it is always advisable for a florist to have a good-sized plantation of his own, provided space is available. If the land is in good workable condition, a batch of corms ought to be planted at once; but if heavy rains have left the soil cold and wet, planting had better be deferred until such time as the soil gets into a friable condition, for there is nothing gained by putting gladiolus into the ground too early.

TUBEROSES.—A planting of these bulbs should also be made about this time. Place them eight or ten inches apart in the row, as they do not do so well if too crowded. Part of the bulbs should be kept for a later planting so as to have a succession of flowers.

CYCLAMENS.—The young plants of cyclamen need to be kept growing right along; and if frames are available, the plants can be put there, where they will do just as well as if allowed to remain in the greenhouse, provided proper attention be given them. In the bottom of the frame, a bed of coal ashes, three or four inches in depth, should be placed, on which to stand the pots. As the weather becomes warmer, some shade will be necessary to the plants, and a common grade of cheese-cloth, tacked to thin strips of wood, and laid across the frame in place of the sash, answers the purpose very well. Of course, the shading should only be given when the sun is shining brightly, and must be taken off every afternoon. Until the nights get quite warm, the sash will need to be kept on the frames every night. They should also be kept on whenever there is any rainy weather.

New White CANNA MONT BLAN

The Greatest Novelty in Cannas

MONT BLANC will become one of the most popular Cannas for bedd purposes; it contrasts so beautifully with the crimson varieties, and gro so even in beds. It has ample bright green foliage; the flowers have f form, the spikes are large, entirely erect and are borne just the right dista above the foliage.

Potted Plants, 75c. each, $7.50 per doz., $50.00 per 100.

Send for List and Prices of 50 other leading varieties of Cannas.

Fertilizers Under Glass.

I have tried wood ashes in potting soil, using from 50 to 75 pounds of the ashes to a ton of soil, but did not get results that were satisfactory, and could do much better with soot from soft coal, though used in smaller proportions than the wood ashes, says W. H. Taplin, of Holmesburg, Pa., in Rural New Yorker. The latter is a valuable manure for various soft-wooded plants, and is quick in its action, but should be used in quite moderate proportions until one finds out something about the needs of the soil by prolonged experiment.

I have also used Peruvian guano, sheep dung, "Brazilian Plant Food," poudrette, nitrate of soda, horn shavings, bone meal, and other fertilizers, and after many years of experiment it seems that for foliage plants in general, and for palms in particular, the best fertilizer to use is one that contains a liberal percentage of phosphoric acid, say from 10 to 12 per cent., and with this about two to four per cent. of ammonia and potash respectively. In other words, use a good bone phosphate, and re-enforce the phosphoric acid part of it with some good bone meal or bone dust, the latter being of much more value when made from unboiled bones than it is after the fertilizer man has kindly boiled out all the fat because he thinks it might be detrimental to vegetation. Of this good bone phosphate I prefer to use from 16 to 20 pounds to a ton of soil, and with it the same weight of bone meal, these fertilizers being mixed in the soil at the time of using, and not in the compost heap outdoors. The compost heap in question is stacked up some months previously, and is composed preferably of sod and top soil from an old pasture mixed with good stable manure in the proportion of one load of manure to six loads of soil. The stable manure for this purpose should be a mixture of short and well-rotted horse and cow manure in equal proportions. It would perhaps be unwise to say that these proportions of the various fertilizers mentioned would be correct to use in all cases, for I think one has to find out the needs of his particular soil, and it is well to "make haste slowly," especially when the welfare of a houseful of valuable plants is at stake; but with the rather heavy, clayey soil that predominates in this vicinity, I have had good results from such practice.

A New Edition of "Violet Culture."

The great demand for "Commercial Violet Culture," written by Professor Galloway, Chief of the Bureau of Plant Industry, Department of Agriculture, Washington, D. C., has exhausted the first edition of this work. A second edition, revised and enlarged, is well under way, and will be published shortly. Price, $1.50 postpaid. Orders booked now by The Florists' Exchange.

Trade Unionism Among Florists.

In the April 23 issue of The Florists' Review, William Scott presents his views very clearly and forcibly on the subject of trade unionism among florists and gardeners. Mr. Scott deals with the matter mainly from the standpoint of the employer; and what he says in relation to the caliber of the workmen who advance, and those who remain stationary, cannot be questioned. These remarks, however, hold true in any line of business, or any profession, but that is not the main point.

Combination is the trend of the day in almost every branch of trade—except the florists' (employers). The object is the betterment of conditions, individually and collectively. The same rule will apply in the case of the workmen in greenhouses. They organize and co-operate to advance their individual and mutual interests—and can they be blamed for so doing?

It is an acknowledged fact that the low wages paid the skilled greenhouse operative, combined with the long hours of labor, Sunday duty, etc., have been advanced by those in a position to know as the principal reasons why the average American boy shuns the florist's as a profession. The consequence is, the unsatisfactory condition of the help market which has existed in this business for years.

So long ago as 1894 President Anthony advocated the institution of an examining board by the S. A. F., having in view the improvement of greenhouse help. His idea was for the Society to grant certificates of proficiency along certain lines, after examination. The subject was debated pro and con, but finally dropped. Evidently it was considered inoperative.

The greenhouse workers apparently are now desirous of elevating their calling in every respect, doing themselves what the employing florist refused, or at least delayed, to do. This we gather from the Constitution and By-Laws of the "Gardeners and Florists' Union of Chicago," Section 2 of Article I. of which reads as under:

"The object of this union shall be to advance the mutual interests of its members, to further the spirit of unionism, to regulate the price of services, and to enforce fair and equitable dealing between its members."

In reference to the eligibility of those desiring to join the union it is set forth in Sec. 1 of Art. II.: "Any competent gardener or florist of good moral character, not under the age of 20 years, may be eligible to membership in this Local.

"Section 2. Each person, before being admitted to membership, shall pay an entrance fee and pass an examination, and shall after admission pay such dues," etc.

It is further stated that the Examination Committee shall consist of nine members, five of whom shall be sufficient to examine candidates, etc.

The good or evil resulting from a union of this character will arise on the one hand, from the full, and on the other from the incomplete, carrying out of the letter and spirit of the constitution. If only "competent" gardeners or florists of good moral character are admitted, the outcome must inure to the mutual welfare of employer and employee.

Mr. Scott is wrong, however, when he asserts that "a labor union among the men in greenhouses is absurd and cannot possibly exist." Such a union has existed for several years in New York City among the greenhouse men employed in the Park Department. Others exist in San Francisco and Chicago. They may or may not be "discontented or incompetent" men who belong to such unions; nevertheless, they exist, notwithstanding their alleged absurdity.

The same writer also fails to grasp the true intent of unions, as regards wages. These unions only set a minimum wage. They do not prevent men who merit it being remunerated beyond the scale; so that the qualifications of "ability, character and faithfulness" are equally necessary with the union as without it, in order that a man may advance and be compensated at his true worth. On the other hand, no employer need retain an incompetent workman—should any such pass the gardeners' union—longer than his deficiencies disclose themselves; no more than he does now, with no union in operation.

Employers, such as described by Mr. Scott, who engage men who "do not even know the plants by name or their requirements," etc., pay them accordingly, and suffer by the transaction, certainly are not deserving of a great deal of sympathy.

We do not object so much to the formation of unions among greenhouse men from the standpoint of bettering themselves and elevating their calling. We shudder, though, to think of the awful consequences that would follow a strike, direct or sympathetic, among such union gardeners. Strikes are the baneful outgrowths of unionism; but, happily, ways and means are developing to counteract them and their direful consequences, in the form of courts and committees of arbitration.

However, the florist and gardening trades are confronted with a condition, not a theory, as regards unionism among their operatives. To offset it, the greatest consideration, both as to wages and hours of labor must obtain. The skilled workman must receive remuneration compatible with his services. The condition calling for "graft" must be eliminated. The vocation must be put on a level with others requiring the same exactions as to education, skill, and ability, so as to induce our young men to enter it, thus tending to its greater elevation and improved help equipment. And to accomplish this end, one desired means will be—greater co-operation among employers, less of the cut-throat methods of doing business, the regulation of prices for the products of the trade that will permit of a fair margin of profit to the owner and an equally fair living for those who help him.

The cheap man will always produce cheap stock, that must necessarily sell at a cheap figure; conversely, the well-paid, competent workman will create reverse conditions. If the unions among gardeners would stop at furnishing the latter, no one would object to their formation and existence.

As we stated a year ago, we have doubts of this effort of labor unionism in this trade making much headway, owing to the limited number of really skilled workmen among greenhouse operatives that would be eligible to join it, and the difficulty of organization on account of the greatly segregated condition of the employees. Still, it is well not to overlook the fact that the leaven is working, and that a factor in the business that must be reckoned with has been instituted.

Taxation of Cemeteries.

A rather unusual question arose in Judge Pond's court in a real estate tax case, in which the Lakewood Cemetery Association resisted the payment of taxes on a portion of its holdings, because the law exempts associations of that kind, says the Minneapolis Tribune.

Assistant County Attorney Smith showed that a large portion of the land owned by the association was wild land for future use, but not yet in use or likely to be for some time as a cemetery. Another large block was occupied by the Lakewood greenhouses, and he showed by the defendant's admissions that only a portion of the flowers and plants were used for decorating the cemetery, the largest amount being sold to lot owners and the general public for profit.

Mr. Smith argued that it was an injustice to let this association escape taxes while other greenhouses adjoining and near were taxed heavily, and the Lakewood plant competed with the others.

Judge Fish, for the defense, argued that the association was a public one, that the property was public property, that all the profits went into a fund which will some time be $1,000,000, and then the income from that only is to be used in keeping up the cemetery for all time. Judge Pond took the matter under advisement.

Obituary

Ethelbert Johnson.

Ethelbert Johnson, secretary ar treasurer of the Johnson & Musser Se Co., Los Angeles, Cal., died at h home, 1006 Burlington avenue, in th city, on April 17. His death came a shock to his friends, who were ignorance of the serious trend his il ness had assumed. Mr. Johnson w the son of Charles Johnson, also the same firm, and was born in Ch cago, July 3, 1871, and consequent was in his thirty-first year. H parents removed to Philadelphia wh he was two years old. In that city was educated, graduated as Mast of Arts, becoming Professor of Engl Literature in a Philadelphia colle Ill health necessitated his resignati and arriving in California in 1892, established the seed firm of E. & Johnson at Riverside, which was fina merged into the firm of Edwards Johnson at Los Angeles, and latte into the present existing firm of Joh son & Musser Seed Co.

Mr. Johnson was an ardent stude in sociological and religious questio and he possessed literary ability of high order, to which his numero contributions to the press in prose a verse have testified. His death at youthful age is of extreme sorrow his many friends. He leaves a wid son and daughter, and both parents.

John Buchi.

John Buchi, florist, Salina, Kan., d at his home April 13, of apoplexy, the age of 60 years and six mont He leaves a widow and one daught Lillian. Buchi was born in Switz land, and came to America 38 ye ago. He lived in Pittsburg for 13 ye where he was married, his wife hav come from his native place in Switz land to the United States to join h He came from Pittsburg to Salina years ago and had lived at the ho on East Iron avenue ever since, wh he has been engaged in the florist bu ness, assisted by his wife.

Henry Bird.

Henry Bird, who for the past fo years has conducted a florist and nu ery business in Newark, N. J., d April 30 at his home, 144 Bellev avenue, that city, after a brief illn from heart trouble. He was 65 ye old. A widow and three children s vive him.

M. A. Magee.

M. A. Magee, a florist of Chels Mass., died on April 25, aged 40 yea

In standing beside the open grave a friend one thought often occurs me in later years, and that is: W does the world owe this man and h much of the debt has he collect The world owes to every man a livi providing he has the industry and termination to collect it. The wo owes to every man more pleasure th pain; more good than bad; more g than loss; more happiness than sorro more success than failure; more l than hate; more friends than enemi but it rests with the man hims whether he collects that debt, for world holds fast to the good thi which it possesses and lets free bad; and it is only by labor and ener only by determination and chara that the debt which the world owes every one is collected.—Chauncey Depew, in an eulogium of the late An J. Cummings.

Indianapolis, Ind.

News Jottings.

Tomlinson Hall business has be quite lately.

J. A. Haugh, of Anderson, was town Monday.

Florists are scurrying arou through the country driving "bargai with the farmers for crab and ap blossoms. These are favorites decorations. Dogwood blossoms also prime favorites.

I. E

NEW BOOKS.

IDE TO HARDY FRUITS AND RNAMENTALS. By T. J. Dwyer. p., 125; paper 50 cents. T. J. Dwyer Sons, Cornwall, N. Y.

hrough the courtesy of the author ave been favored with a copy of the ove-named work, and have read it h real pleasure. There are on the rket many works treating of the rdy fruits and ornamentals from ny points of view, but here is a new e that has a new point of view.

t might be called a "horticultural graphy" of the author, as it is filled th his personality. In it he does not ound the cast-iron theories, culled m encyclopedias and nursery catatues, which are usually the entire itents of the average horticultural uide," but instead gives to his read- the results of his thirty years of imacy with the trees and plants of ich he writes.

The book is most interestingly writ- n. One cannot read without being ed with the author's enthusiasm for e hardy flora. It scintillates with t and wisdom, and some good stories the author's experiences, the best ing his first introduction to the awberry.

wonder if Mr. Dwyer realized the tility of printing "best lists" of anying—fruits, flowers, books, or anyng, the acceptance of which depends as many tastes as there are read- s. In his lists of the most suitable uits and berries he will no doubt be tacked by every one—at least menlly—who reads the book. He is sure have left out some fruit, berry, or wer that the reader dotes on. I ve a grievance myself on this score. the list of best apples, the Rambo es not appear—that choicest of all— y lifetime favorite—the apple that is t-of-sight and ahead of all others for e eating qualities.

This guide should be in the hands of ery one interested in hardy fruits and ants. The old-timers will find some w wrinkles and the amateur will bibe new enthusiasm and will wish s fifty-foot square back yard was a rty-acre orchard, surrounded by a irty-foot hardy border!

The make-up of the book leaves uch to be desired. It is well and ar- stically bound, but the almost entire sence of a margin to the pages and e closely set, fine print detract from s appearance. These defects are prob- ly charged to the printer and can be medied in the next edition, which ill doubtless soon be called for. One ot knowing Mr. Dwyer would not ather from the book that he is the nior member of one of our largest ursery firms—there is not the suspi- on of an advertisement in the book. is simply a recital of the life-work a loving enthusiast among the hardy uits and ornamentals.

SAM. A. HAMILTON.

CORRESPONDENCE.

Ivory Soap as an Insecticide.

ditor Florists' Exchange:

In looking over some back numbers your paper I notice the mention of vory soap as an insecticide. I have o experience with it for red spider, ut as a general insecticide I have und it excellent and perfectly harm- ss to all plants. Messrs. Waters & icholson evidently used it too strong. ne cake to 12 gallons (possibly there re different sized cakes—I do not now) is a good strength and will kill ll the softer insects that it touches. ld hard scale insects do not always uccumb, but I have killed many of hem with it. If there is more than ne size of Ivory soap I am sure we ave the smaller size.

FRED RAFFERTY.

Santa Ana, Cal.

CHANGES IN BUSINESS.

NEWPORT, R. I.—T. Fieldhouse is now vith J. H. Bowditch at Topsfield, Mass.

HUDSON, N. H.—A. S. Andrews has one into the nursery business on a large cale here.

OGDENSBURG, N. Y.—Mrs. Thomas awrance has opened a florist's store on Ford street, in connection with her green- houses.

WORCESTER, MASS.—Fred G. Davis, of Worcester, Mass., and Walter Tappan, of Hamdon, Ont., will start in the florist business here. The latter gentleman was for some time assistant superintendent at the Dale Estate, Brampton, Ont., and is an expert rosarian. Roses and carnations will be specialties, and 100,000 square feet of glass will be devoted to their culture. The houses are nearing completion.

WHAT OUR ADVERTISERS SAY

Under this heading The Florists' Exchange, commencing with the issue of May 2, 1903, will publish voluntary statements, each limited to fifty words, from its advertisers, calling attention to the main items offered weekly in their advertisements. The object is to assist our patrons.

The largest as well as the smallest advertiser is entitled to contribute.

Communications of this character must reach us *not later* than Wednesday morning.

The experiment is tentative, and we shall be guided by developments regarding its continuance.

Prices are not to be quoted.

On no account will matter of this kind be written up in this office.

Each advertiser must assume responsibility for the statements he makes.

Wm. Herzog, Morris Plains, N. J.: I have 100,000 bedding plants ready, and can fill all orders promptly the day received. The stock I offer is first class, and ready for immediate planting. You will make no mistake in placing your orders with me.

John H. Jackson: Parties who are interested in the benefits of drainage and how to drain will find some valuable information in the little work published by me. Thousands of waste places have been reclaimed by my plans and famous tile. This book will be sent free of charge to all wishing it in the New England and Middle Atlantic States.

John Scott, Keap Street Greenhouses, Brooklyn N. Y., says: "I draw attention this week to my special offerings of cannas; these are in 25 of the leading varieties, and I have over 100,000 of them. Also Pierson fern for immediate delivery.

FIRMS WHO ARE BUILDING.

HENSALL, ONT.—W. H. Harburn will erect another greenhouse.

WALTHAM, MASS.—S. H. Gidley is building an extension to his greenhouse.

NYACK, N. Y.—Manley Ackerman is erecting two large violet houses.

SAGBROOK, ILL.—Mrs. Hattie Bailey is building an addition to her greenhouse.

NEWBURYPORT, MASS.—Pearson will build another greenhouse for carnations.

WARRENSBURG, N. Y.—S. E. Prosser is building a new greenhouse here.

SOUTH SUDBURY, MASS.—James E. Tulis is building another greenhouse for carnations.

ALGONA, IA.—H. A. Richardson & Co. are planning to build another greenhouse this season.

NATICK, MASS.—The Waban Rose Conservatories will erect another greenhouse, 700 x 40 feet. The contract will probably be awarded to the Lord & Burnham Company.

Fire at an Experiment Station.

Last week the New Jersey Agricultural College and Experiment Station suffered a severe loss by the total destruction of the contents of the building containing the chemical laboratory with apparatus and collections. This building also contained the office of the State chemist, State entomolgist and other departments whose valuable collections and notes can never be replaced. The loss of the building is estimated at about $50,000, but this is insignificant when compared with the great loss to science and agriculturists in general by the destruction of the valuable collections, libraries and notes of the various officers and investigators.

Noteworthy New or Little Known Hardy Plants.

Concluded from page 485.

Spiræas are too well known to need much comment, but a great amount of attention is being devoted to this class of plants in Europe, and many and varied are the new forms which are yearly appearing as novelties in European lists. Some of these find their way here and several very interesting ones have found a place in some of our catalogues. Of these the garden varieties have been enriched by Spiræa aruncus var. Kneiffi, a very handsome thing, with its tall, dense, feathery plumes of creamy white flowers. It is a veritable gem for any garden that has a cool, moist, rich soil in a somewhat shady spot. Spiræa chinensis and S. Lemoinei are two very fine distinct types, having creamy white flowers with crimson anthers, which give them a very pretty and unique apearance. Spiræa kamschatica is a very stately plant, with white sweet-scented flowers, growing eight to ten feet high. It was brought from Behring's Island in 1889, and is also called Spiræa gigantea. S. rivularis is another very beautiful plant with creamy white flowers borne in long, branching plumes, growing about four feet high. But the brightest one I know is Spiræa venusta of the catalogues, but S. lobata of the botanists, and called Queen of the Prairie, which is a very fitting title. It is the brightest and best in our collection.

Clematis recta (erect) is also a very useful hardy plant and looks well either massed or singly. A single plant well established is a grand sight. It grows three or four feet high and bears numerous pure white flowers very sweetly scented. As a cut flower for decorative purposes it is excellent. The stems are beautifully clothed with nice green foliage and can be cut almost any length. For church and other similar decoration it is unsurpassed, and usually flowers when material suitable for this purpose is scarce. It has been in cultivation for nearly three hundred years, yet I am sure its beauty is not fully realized. A very pretty double flowered form of this exists, but it is quite rare on account of its slow method of propagation.

Stokesia cyanea is a plant that has rapidly come to the front the last two or three years, and deservedly so. Although an American plant introduced or discovered in 1766, it does not appear to have been generally cultivated. In this plant the most wonderful developments have been made as regards the size of flower. Nicholson's Dictionary of Gardening describes it as being one inch across, few or solitary; other English catalogues say two or three inches, that it must be lifted in the Fall and placed in the greenhouse to see it bloom. Horsford describes it as "a plant of the aster family with blue flowers an inch or so wide"; and A. Perry says, "a sweetly pretty Autumn-flowering perennial of great merit, habit erect, two feet, large lavender blue flowers with a reddish center, fully two inches across." A great deal of surprise and rejoicing has been created the last two or three years over what is described as an early flowering form which some want to name Præcox in order to indicate that it is an early flowering variety. I have noticed, I believe, what purports to be this very same thing in fourteen or fifteen thousand plants grown at Riverton last Summer. A few plants flowered very early and set seed and died down (that is, the tops died down). While the majority of the plants came into bloom later and so continued until late frosts completely cut them down, other plants again, though full of buds and in good, robust condition, did not flower at all. These plants were all grown on high sandy ground and were the admiration of all who saw them from July to hard frost in November. A warm sandy soil is recommended as being best adapted to their culture, but two years ago I raised three or four thousand plants from seed, which were pricked off into trays as soon as large enough to handle, one inch apart, and from these trays they were planted out into the open ground in a very moist, damp spot. By the latter part of July they commenced to flower and so continued until hard frost in November cut them off. Never did we have stokesia flower so freely, but I admit it would have been ruinous to have left them on this ground for the Winter. The same year good strong plants from 3-inch pots were planted in light but well enriched, sandy soil, and they were pale and poor in comparison to the seedlings planted on the damp spot. Its native home appears to be in wet pine bogs. The flowers are a beautiful light lavender blue and three to four inches across, sometimes showing a faint tinge of red. If proper precautions are taken to insure it from standing under water during the Winter months, it is one of the most satisfactory perennials grown. It is propagated by both seed and division.

Michaelmas daisies, or hardy asters, are also coming very rapidly to the front, notwithstanding the fact that wherever we may go or turn in the Fall months, the landscape is dotted with them. In July we may see Aster spectabilis, A. concolor and A. linarifolius and several others. In August and September comes a host too numerous to mention, but many of them have decorative merit and improve under cultivation. Aster Tradescanti was first introduced into Europe in 1633 by John Tradescant, doubtless from Virginia. Some European catalogues boast a list of over two hundred varieties. Over fifty are grown at Riverton and most of them have true merit. In this class of plants it is possible to have the garden gay from May to even December. The alpine varieties are always pretty and attractive during the months of May and June, with their large blue, white and purplish red flowers fully two inches across; the speciosa and superba type are even larger. Shortly after these come the beautiful Aster pergrinus, a lovely thing and one worthy the best attention, but it does not seem happy in our soil at Riverton. Its large, purplish, rose-colored flowers are fully two inches across and are very freely produced during the hot days of early July. After flowering with us it invariably dies and no amount of coaxing has yet appeared to bring it through; nevertheless, I shall try it again. Aster amellus bessaribicus, the Bessarabian aster, is one of the finest and best dwarf asters grown. It commences to flower with us in June and if not allowed to produce seed it keeps right on flowering until frost cuts it off. But perhaps the most showy part of the season is in September and October, when they lighten up the whole landscape with their myriads and myriads of flowers of various hues and colors. Who can see a mass of the beautiful A. cordifolius elegans without being impressed by the symmetry and beauty of a spray containing hundreds of its dainty little miniature flowers, or the chaste form of A. turbinellus, the bright glistening crimson of Mrs. F. W. Raynor, the amethystine blue of A. amethystinus, or the deep crimson and purple of well-cultivated forms of A. novæ angliæ, or the deep blue of A. amellus elegans, the soft lilac of A. lævis, with its tall, slender growth, the lavender blue or lilac of A. Shortii, and the curious growth of the sturdy upright A. grandiflorus—carrying well into December the flowering period of some of the most beautiful of our native plants. These are generally grown from division, but raising them from seed is quite fascinating, as you never know what you are going to have; all may be expected equally as good, with the possibility of some improvements. The North American type, raised from seed, flowers much later in the Fall and does very well for massing in beds. A. ptarmicoides, a white form with single achillea-like flowers, if raised from seed will give an abundance of good, useful cut flowers from September to December. Asters have for years past been very much in use in England as pot plants, and such varieties as longifolius, Mme. Soyneuse, Mr. Peters, St. Bridget, and hybridus nanus would readily adapt themselves to this purpose.

WISTARIA CHINENSIS.

Tritoma Pfitzeri is perhaps getting old now, but it is still being offered as a novelty, and so it deserves to be. It was first introduced into Germany by the man whose name it bears, I believe in 1894. Later on, the whole stock was bought and brought here and found to be nearly identical with one purchased from a florist under the name of "Everblooming," and this name, having priority and being a little more catchy, was retained by its purchaser. But under the name T. Pfitzeri, by which it has scored its greatest popularity, it was and is still sent out in Europe, and by Henry A. Dreer, Inc. It is needless to say its popularity is unbounded and there is no wonder at it when we consider the many uses to which it may be put, and the ease with which it is grown and its ready adaptability to most all soils and conditions. John Lewis Childs says: "It is the grandest bedding plant ever introduced, surpassing the finest cannas for attractiveness and brilliancy, equal to the gladiolus as a cut flower and blooms incessantly from June until December, regardless of frost. Plants are perfectly hardy in open ground all Winter south of Philadelphia; further north they must be protected or wintered in a cellar like the ordinary tritoma. Just bury the roots in sand; nothing more is required. Should be planted out very early in Spring, and will commence growth and bloom at once, growing larger and finer every day. Plants show from 6 to 20 grand flower stalks all the time, each holding at a height of 3 to 4 feet a great cluster of flame-colored flowers of indescribable beauty and brilliancy. Each cluster keeps perfect several weeks, and when it fades two or three more are ready to take its place. Fall frosts do not kill it or stop its blooming, and it is as brilliant as ever long after all other garden flowers have been killed. For cutting it is unsurpassed, and the beautiful long spikes keep several weeks in water. Without a single exception, it is the most desirable garden flower. It has created a sensation in the New York cut flower market." Of course, this is a catalogue description and must be taken with a grain of salt, but still it seems almost difficult to overestimate the beauty and utility of this grand plant.

Tritomas generally are coming to the front. In 1899 about thirty-seven varieties were offered by one Holland firm, and these have quite a wide range of color through various shades of yellow and red, and even to white. Here again is another family now so large and so varied as to give us flowers from June until late Fall. T. Tuckerii is the earliest to bloom with us, being rather a curiously pretty plant when in flower. The color of the flower is yellow tinged with red. It is not a constant bloomer, but in foliage it is quite decorative. Otto Mann comes closely after this with bold striking foliage and large stout flowering scapes, bearing a huge mass of handsome scarlet and yellow flowers; and right in line with these come those of the ever-blooming section, as they are now becoming to be known. Carolina, with its small grassy foliage and persistent bright coral red flowers, is quite as free a bloomer as Pfitzeri. R. C. Affourtit is another claimant to these honors, and, in my estimation, it is a much improved Pfitzeri; but perhaps the most remarkable one of all is Tritoma Triumph As its name implies, it is a most stately and remarkable looking plant. It is a very vigorous grower, making leaves over three feet in length and throwing up a branching flower scape four or five feet high, with a head of rich orange or golden yellow flowers twelve to fifteen inches long. It also throws out two smaller heads on the scape, a characteristic which I have not seen in any other variety. Numerous other varieties have been tried and all are very different from the real old-fashioned T. uvaria. It is necessary to store all or most all in cold storage during the Winter months; we generally lay ours in a cellar with a sandy bottom.

Polygonum multiflorum, introduced a year ago into this country under the name of P. Baldschuanicum, is a rapid growing climber, and is a native of China and Japan. It has proved entirely hardy on Long Island and is really a more desirable plant for America than P. Baldschuanicum. It grows from twenty to twenty-five feet in a single season from very small plants, and in September is almost completely covered with creamy white flowers, which are produced in wonderful profusion from the axils of the leaves, and it proves to be a very attractive and desirable addition to our list of climbers. It is a very deep-rooting plant and bears very large oblong tubers on its roots.

I must not close my paper without saying a few words about the Cimicifugas or Actæa. S. C. japonica, or what is perhaps better known as Actæa japonica—introduced from China in 1879, but which has been lately revived in Europe and a year or two ago found its way into the American trade—is one of the best hardy blooming plants in cultivation, flowering in late October and November. Its feathery white racemes stand up conspicuously two or three feet high, with beautiful foliage, and as a cut flower, although but short lived, it is simply invaluable. As a garden ornament it stands in its season unexcelled and lasts a long time in flower. This plant should not be frequently disturbed, and if removed it should be done when in a dormant condition; in the early Spring is perhaps the best time, for if moved when in leaf the foliage is apt to die completely off, and that is the end of that plant for the season, and this is especially so during a dry period, but the rather tough fleshy roots remain in almost perfect condition in the ground ready under favorable circumstances to commence growth again the following Spring. Altogether this is a very remarkable and showy family. Our native baneberry, Actæa spicata, commences to flower in early Spring; A. s. rubra follows a little later than this; then Cimicifuga racemosa, a truly majestic plant, flowers in July, the Japanese variety, Pityrospermum acerinum, in August; americana cordifolia carries us into September, then comes C.

hurica with its dense masses of ort white flowers, on black stems, hich carries us into October, when C. ponica takes up the display and comtes the show for the year.

These are but a few examples of the any new and interesting things which e constantly claiming our attention d wooing us on into those mystic pths of flowerland which no man or n can describe; and if these few ude remarks from a novice, not an pert as your secretary was pleased style me, has created any desire in y of you for the beautiful in Nature, y efforts will not have been in vain.

Wistaria as Bushes.

What a lovely vine is the Chinese staria! As generally seen climbing a porch, some old tree, or running wires or other supports, often to the ird and fourth story of a dwelling, is a grand sight! And somehow one ally does not feel Spring is truly here l the wistaria is in flower. In addion to its uses in the way mentioned, makes capital standard bushes. rive a stake in, tie the vine to it, and a few years the "tree" can support elf.

Another pretty object is formed by tting a plant and letting it run at ill. Our illustration explains what is eant. It takes a situation where om can be afforded it to admit of is form of growth, but what a lovely ject it is! This bush attracted my tention a quarter of a mile away, d not till it was approached much oser could its character be discerned. has been planted about fifteen years.

JOSEPH MEEHAN.

loral Clock at St. Louis Exposition.

With its mechanical frame quite ncealed beneath beautiful flowers hd vari-colored foliage plants, the ammoth floral clock that may be en at St. Louis by visitors to the ouisiana Purchase Exposition in 1904 ill be by far the largest timepiece er constructed.

The floral clock is immediately north the Agriculture Building, and to the sitor appears to be made entirely om contributions from the floral orld. The mechanism of the clock is aried and the huge dial, 100 feet in ameter, shows its face six inches bove the ground. The dial, the hands, e minute hand being 50 feet long and oving 5 feet at each move, and all e frame are so covered with flowers s to quite conceal any mechanical conivances.

The numerals marking the hour are feet in length and are made of right-colored coleus. In the circle rrounding the numerals are collecons of 12 distinct plants, each collecon being 25 feet long and 12 feet ide. Nature has ordained that each these plants should open its blosoms at a certain hour of the day, and e great floral clock shows how the ws of nature are as exact as the meanical laws discovered by man.

The entire center of the face of the ammoth floral clock, a space inside e circle created by the numerals, and feet in diameter, is composed of alernanthera. Encircling this immense ed of alternanthera, and separating it om the 15-foot floral numerals that ark the hour, is a narrow band of ntaurea.

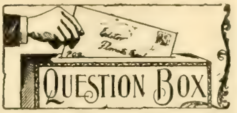
The hands of the clock are made of framework of steel, but wooden oughs filled with soil are provided, nd in these troughs myrtle, ivy and ther creeping green plants grow luxriantly and completely conceal from iew everything but themselves.

The circle surrounding the numerals 300 feet in circumference and the ections of hour flowers each occupy space 25 feet long and 18 feet deep. he sections are divided by narrow trips of foliage plants and each secion thus retains its individuality.

Surrounding the 12 groups of flowers a circle of grass, six feet wide.

The floral clock will be as attractive n exhibit at night as it is in day. mong the foliage of the hour numerls are 1,000 incandescent electric amps, not visible during the day, but fter nightfall, when the electric curent is turned on, the myriads of lamps luminate the entire exhibit and make t as light as day, and more beautiful.

The floral clock is the exhibit of the ohnson Service Company, of Milwauee.



Heating by Coil Boiler.

(101) Kindly advise me how to make a coil boiler large enough for 500 feet of radiation. Does the fire come in contact with the pipe? About how long should such a boiler last? Would it give as good results and be as economical as a regular hot-water heater?

W. C. P.

—The life of coil boilers is very indefinite. Sometimes, if built of small pipe, they give out in two or three years, when built with screw joints; while in other cases they will last much longer. But at the best their life is less than half that of cast-iron boilers. Use a grate two feet square, and make the boiler of 100 feet of 2-inch pipe arranged in four coils containing four pipes each.

L. R. TAFT.

Piping.

(102) How many rows of steam pipe, 1½-inch, do I need in a carnation house 9 feet wide, 5 feet high at sides, and 7½ feet high in center?

P. V. O.

—If the varieties to be grown do not require over 50 degrees, it can be secured by placing two pipes on each side. For 55 degrees, in severe weather, an extra pipe would be desirable. In the latter case, the flow could be carried at the ridge, and two returns on each side. This would answer for a house 80 to 100 feet long.

L. R. TAFT.

(103) I have a Weathered conical boiler, No. 6, and want to use three-inch cast-iron pipe. The house runs southeast, stands alone, is 16 x 85 feet, and 10 feet high. There are three divisions, 23 feet for palms, 30 feet for roses, and 32 feet for carnations. The outside temperature drops to 18 below zero.

SUBSCRIBER.

—Use ten pipes for roses and palms, with two flows on each side of the house. Reduce to one on entering the carnation house. Three returns will be required on each side of each house.

L. R. TAFT.

(104) Kindly inform us how many four-inch cast-iron pipe it will take to heat 100 feet south to 50 and 55 degrees for carnations, with the thermometer going to 10 degrees below zero in cold weather; also how many pipe to heat the northern 50 feet to 60 and 65 degrees for roses; also how many flows and returns for each and the best way to lay them. The house is 150 x 20 feet, and is to be built on the east side of a present house.

R. C. & SON.

—As the house has but one exposed wall there should be no difficulty in maintaining the temperature desired if seven four-inch pipes are placed in the south end and nine in the part to be used for roses. The extra pipe should be on the exposed side of the house. Start two flows on each side of the rose house, and when they reach the partition connect them by means of a Y and continue the single pipe to the south end. If this is much exposed, and especially if there is a bench across the end of the house, carry the flow pipes as far as the door from each side. There will be two returns on the west and three on the east side of both houses. Of course, the returns should be under the flow pipes, and should have a slight fall toward the heater. If there is an elevated expansion tank at the north end it will be well to have a vent pipe in each flow at the south end.

L. R. TAFT.

Concrete—Chimney—Heating.

(105) Can ashes (soft coal) be used with sand and gravel to make concrete? Can ashes and gravel be used with cement, and in what proportion, same to be employed in building the walls of a cellar?

I have a boiler with a grate surface of 4 x 3½ feet, 44 3-inch tubes, 12 feet long, what size chimney is required?

The same boiler heats 100 feet, 6-inch, 12 feet 5-inch, 100 feet 2-inch, 20 feet 4-inch pipe. How much more will it heat?

M. D. S. & SON.

—It is not advisable to use ashes of any kind for concrete The coarser the sand and gravel the smaller the amount of cement. If broken stone is available, four parts can be used to two of coarse sand or rather fine gravel, and one of Portland cement. In some places, pebbles from the size of a hickory nut to that of a hen's egg can be readily obtained, and thev can be used to take the place of broken stone. If neither are available, use five parts of gravel to one of cement.

A chimney 18 inches in diameter will be desirable.

A boiler of this size would, with frequent firing, take care of 25 per cent. radiation, but considering time and fuel the present radiation will be more economical.

L. R. TAFT.

A Lasting Fern.

(106) There is a fern, sold by florists in this part of the country, which, I am told, is shipped from Pennsylvania, and which, they tell me, keeps for several months after cutting. Are these ferns dipped in some preparation to give them their lasting properties; and, if so, what is the preparation? Or, is this lasting property the direct result of the climate? At what time of year are the fronds cut? They come tied in compact bundles and are similar in appearance to those which grow in the Michigan woods.

C. L. P.

—The ferns alluded to are no doubt the hardy ferns so much used by florists. There is no dipping or other preparation given the ferns; they are simply gathered in the Fall and stored away in cool quarters. They are the common sword or dagger ferns found in the woods, and can be gathered and stored from the Michigan woods just as well as in any other State.

"Day Plant," and Moss Pink.

(107) We have some customers who would like to know what a "day plant" is, as they call it; also a "moss pink." Could you give me any idea of what are referred to?

A. R. P.

—The day plant your customer refers to is probably the day lily, the correct name of which is hemerocallis, a bulbous plant that can be secured from any seed house.

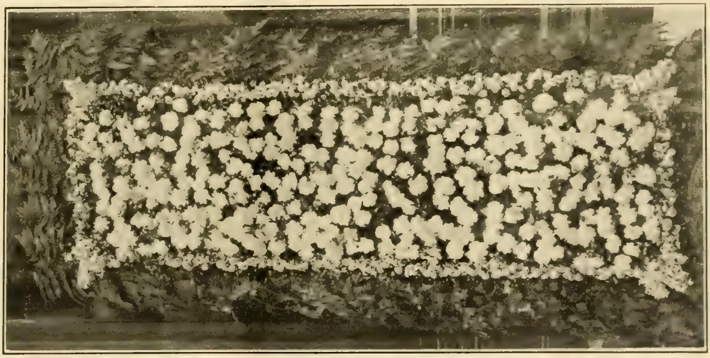
The moss pink is a name usually given to Phlox subulata. This is one of the hardy phloxes, and can be had from any nurseryman.

Snails.

(108) Will you suggest some effective remedy for the slug, sometimes called snail, the well-known mottled gray greenhouse pest that works its mischief by night? With us, it shows a preference for petunias, carnations, violet and pansy blooms. We have tried a layer of lime on top of the bench boards, but this has to be renewed too often on account of watering. Can the pest be trapped?

D. T.

—To get rid of snails, lime is usually a very good remedy. Hammond's slug shot is also a good thing to use. For trapping the snails, we would employ cabbage leaves, laying one here and there among the plants, then, in the mornings, on the under side of the leaves, will be found the snails, and they can be destroyed by shaking them into a box containing some fresh lime.



FLORAL CASKET COVER—ARTIST JOHN H. DUKE, TROY, N. Y.

A Floral Casket Cover.

The illustration herewith shows a floral casket cover made by John H. Duke, of Troy, N. Y., for the funeral of Judge Nason, of that city. The deceased jurist was a Yale graduate, and the carnations used were dyed blue.

In regard to this coloring process Mr. Duke says: "I have been coloring carnations for some time. It is remarkable to observe the attention they have received from the public. The flowers sell easily at $1.00 per dozen. The people are aware that the blooms are colored, nevertheless they buy them freely, quite a number being used at balls to match the dress fabrics."

A New Edition of "Violet Culture."

The great demand for "Commercial Violet Culture," written by Professor Galloway, Chief of the Bureau of Plant Industry, Department of Agriculture, Washington, D. C., has exhausted the first edition of this work. A second edition, revised and enlarged, is well under way, and will be published shortly. Price, $1.50 postpaid. Orders booked now by The Florists' Exchange.

Review of the Market

NEW YORK The extremely warm weather the past day or two has played havoc with the cut flower business. Sales have fallen off very perceptibly and supplies have been on the increase. At the beginning of the week business was fairly good; neither roses nor other flowers were over-plentiful, and it was possible to clear out daily. With the very warm day of Wednesday, however, business came almost to a standstill, and on the day following supplies of all kinds of flowers increased very much. So far as roses are concerned, prices remain about the same as quoted last week, but it is very difficult to make clearances. With American Beauty it is possible at times to obtain 20c. each for a very few, but the great majority have to be cleared out at the lowest quoted figures; $8.00 per hundred is the asking price for special Bride and Bridesmaid, though for a few of a superior grade that come from Canada 12c. is occasionally demanded. Buyers are not very anxious for this brand of roses at this particular time of the year. The Canadian growers do not seem to cut their buds as close as do the majority of those who consign to the New York market, consequently the flowers open much more quickly in the hands of the retailer, a fact that is detrimental to the Canadian-grown roses at this season. We also notice an occasional shipment from the Dale Estate of the new rose, Canadian Queen. No doubt if this rose were in regular supply it would sell to better advantage; as it is, the supplies are intermittent and retailers are a little shy in handling the flowers, not knowing whether they can procure stock of the same variety next day, should a customer desire it. Canadian Queen has been bringing 6c. each for No. 1 grade.

The No. 2 grades of Bride and Bridesmaid are extremely plentiful, and in order to clear out at times they have to be sold at the lowest quoted price, namely, $1.00 per 100.

Cattleya Mossiæ are coming into the market more plentifully but do not meet with the demand the flowers deserve; 40c. each is the outside price.

Carnations are arriving in enormous quantities, and a great many of the inferior grades are seen. These are sold at any price ranging from 75c. to $1.00 per 100. For the good ordinary kinds $2.00 per hundred is about the ruling figure. Mrs. Thos. W. Lawson and white varieties that are good are bringing about $4.00 per hundred, while fancy sorts, Prosperity included, sell at $5.00, with an occasional sale of 100 at $1.00 more.

Lilies are still quite plentiful and a great many are being sold at $2.00 per hundred, the best blooms not realizing more than $5.00.

Lily of the valley has been the best selling flower on the market, and up to Thursday morning $4.00 and $5.00 per hundred were the ruling prices. On that day, however, extra large shipments reached the city and the values weakened considerably.

Single narcissus, both yellow and white, are still very plentiful and 50c. per hundred is about what they bring. Daffodils reach $1.50, they not being so plentiful as the single ones.

White sweet peas continue to sell fairly well, 10c. per bunch being realized; pink ones, however, do not meet with nearly so good a demand, and the prices for these range from 3c. to 8c. per bunch, according to quality.

The warm weather has nearly made an end of the violet business. While there is still a good supply coming to the city, the quality is poor and the storekeepers will not handle the flowers to any extent. Through some cause or other the Greeks do not seem to have much use for violets at this time, either, consequently the average returns for this stock must be extremely low.

It has been usual at this season to have a good supply of lilac from the South; this has not materialized so far this year, however, and there is a good demand for the home-grown product, bunches of which are realizing from $1.00 to $1.25 each.

A very good grade of double flowering stock is coming in, realizing 50c. a bunch. Bunches of antirrhinum are also selling fairly well at from 35c. to 50c. a bunch.

The demand for maidenhair fern has fallen off considerably, and the same condition is noticed with regard to smilax.

BUFFALO.—In retail lines a fairly good business prevails. The supply of flowers still meets the needs in good qualities, with carnations rather short for the calls, and violets practically done. Roses are plentiful and fine. VIDI.

CHICAGO.—The past week business opened up in fine shape, but after the first two days things were on the decline, while toward the latter part of the week they returned to normal, with prices a little stiffer. American Beauty are selling at from $3.00 to $4.00 per dozen for extra long down to $1.00 to $2.00 per dozen, while the prices on all roses are, with the exception of Liberty, from $4.00 to $8.00 per 100. Good Liberty are selling at $25.00 per 100 for extra fancy, down to $6.00 to $8.00 for other grades. Some fine Kaiserin Augusta Victoria and La France are to be seen, and readily realize from $4.00 to $10.00.

Carnations are as yet not over-plentiful and are fairly well cleaned up after each day's sales, with the price considerably above the average of former years at this season. Ordinary stock runs from $2.00 to $3.00, while extra fancy are bringing from $3.00 to $4.00 per 100.

Of bulbous stock the supply has shortened up considerably. Few tulips are to be seen. Those available find a ready market at from $2.00 to $5.00 per 100. Lilies have been selling well for a few days, with the price firmer than last week. Lily of the valley is not over-abundant, ranging from $3.00 to $4.00; callas are in fair supply and selling at from $10.00 to $12.00 per 100.

Retail trade in cut flowers is satisfactory, better than in plant lines. Shipping business continues fairly brisk. R. J.

ST. LOUIS.—All three wholesale houses are at the present time receiving an enormous quantity of stock of all kinds, especially of the second grades. Long-stemmed American Beauty roses are good sellers at $2.00 and $3.00 per dozen. This price is for the best stock. Thousands of shorts are sold for almost nothing. Other roses are bringing $8.00 for choice, and from that down to as low as $2.00 and $3.00 for seconds and thirds. The plants of all growers seem to be in crop, and the supply is testing the capacity of the wholesalers' ice boxes.

Lilies are a great glut; callas are selling at $5.00 and $6.00 per hundred; Harrisii and longiflorum at $10.00 and $12.50. The demand is not any too good for them.

Carnations are fine in quality, and most plentiful in all varieties; even white is going a-begging, something that has not happened for a long time. The J. D. Thompson Carnation Co. is sending in fine flowers of Enchantress, which suffer with the rest in price; $15.00 per thousand is all the wholesaler is able to get for them at present; and $2.00 and $3.00 in hundred lots.

Sweet peas are selling well. These are not as yet plentiful; 50c. and 75c. is the price asked for them. Before another week or two they will be very abundant. Smilax is very scarce in this market and any grower who has plenty of it to cut would do well to consign it here. The price is 15c. per string. Asparagus takes the place of smilax. Common ferns have gone up a little in value, owing to their scarcity. St. P.

INDIANAPOLIS, IND.—Nothing out of the ordinary has occurred in the flower line lately. There have been few decorations, and funeral work is light. Quite a number of out-of-town people inquire about vines and bedding stock, seeds, and other Spring and Summer paraphernalia. There are a goodly number of customers, but sales have been light. Cut flowers are not overly abundant. Roses are equal to the demand. Most of the rose plants in this vicinity are off crop at present. Bridesmaid, Bride, and Meteor sell at 6c.; Sunrise, 4c. to 5c.; Liberty, 10c. to 18c. The average retail price is $1.50 the dozen. There are few calls for American Beauty, which sell at from $2.00 to $9.00 per dozen retail.

Quite a lot of out-of-door bulbous stock is coming in, which is sold at a low figure. Sweet peas sell well at $1.00 per hundred wholesale and $1.75 per hundred retail.

A few violets are still in the market, but the demand is light.

Both callas and Harrisii lilies are plentiful, perhaps more so than at Easter; $1.00 to $2.50 is the wholesale price per dozen and, retail, $3.00 per dozen. I. B.

CINCINNATI, O.—The following prices are now ruling in this market: American Beauty, 36 to 40 inches, $3.00 per dozen, 30 inches, $2.50; 24 inches, $2.00; short, 2c. to 8c. each. Bride, Bridesmaid, and Golden Gate, $8.00 per 100. Liberty, select, 15c.; 1st, 10c. to 12c.; medium, 6c. to 8c., short, 3c. to 4c. Carnations, fancy, $3.00 to $4.00 per hundred; medium, $2.00 to $3.00. Harrisii lilies, per dozen, $1.50; callas, 10c. each; fancy adiantum, $1.50 per 100. A. Sprengeri, 3c.; lily of the valley, $4.00 per 100; sweet peas, 75c. to $1.00; daisies, 50c. per 100; common ferns, fancy, $2.00 per 100. E. GILLETT.

LOUISVILLE, KY.—The market continues steady, with good stock scarce. Usually at this time we have so much hardy outdoor stock coming in that it causes the greenhouse flowers to accumulate, but this year that class of material is comparatively nil and consequently good greenhouse stock is scarce. Another reason: the weather has been very unfavorable, stock opening very slowly. Prices both wholesale and retail hold up well. Retail prices quoted are: Roses, $1.00 to $2.00; American Beauty, $2.00 to $5.00; carnations, 50c. to $1.00; callas, $2.00 to $3.00; mignonette, 50c. to $1.00; lily of the valley, 50c. to $1.00; sweet peas, 25c. to 50c.; marguerites, 10c. to 50c. per dozen; smilax, 25c., and asparagus, 50c. to $1.00 per string. A. R. B.

MILWAUKEE.—Trade conditions were somewhat light the past week. The principal demand was for funeral work. A large lot of belated lilies is in the market, and any reasonable offers on them are accepted. Outdoor tulips and hyacinths are now in. Roses and carnations are more plentiful, and light-colored flowers are usually cleaned up at good figures; but colored stock has taken quite a drop. The violet season is about closed and returns to the growers were more satisfactory than in former seasons. American Beauty roses are quite plentiful; the medium and short grades find a more ready market than the long, fancy stock. Smilax is extremely scarce and other greens are in large demand.

Growers are now busy preparing their bedding stock, also getting their carnations out in the field. Some building will be done this Summer. C. C. Pollworth Co. are adding three large houses for roses. C. Johansen, Th. Schwelke, Chas. Kitzerow, F. Kaiser will each add one house for carnations. P.

New York.

News of the Week.

We were treated to a temperature of 90 degrees on Wednesday, and on the day following the record was not far below. We rarely miss having a hot wave in the month of April, but coming as it did so late this year, the bulb displays in the parks have been caught while at their best almost, and their period of beauty, in many instances, has been cut off suddenly.

The display of hyacinths and tulips in Prospect Park, Brooklyn, has been on a grand scale this year, as also has that of Seaside Park, Coney Island. The latter park was only laid out last Summer; the spot it occupies was a sand waste, and every bit of soil had to be carted there. The lawns and the plantations of rhododendrons are now looking fresh and green, and pansies and bulbs have been planted extensively. Park Commissioner Young certainly deserves great credit for the excellent manner in which he has established this beautiful park at the seaside in such a short time.

Ernst G. Asmus, West Hoboken, N. J., who has been sick for several weeks, is now recovering.

M. Barker, Chicago, Ill., has been spending a few days in the city.

A. Dimmock has changed his New York address from 60 Vesey street to 138 Liberty street. Mr. Dimmock has just received word that his firm, Sander & Son, England, has been awarded the following prizes at the Quinquennial Show in Ghent, Belgium: First prize for azaleas for commercial use, first for new azaleas, and first for new plants.

Wm. Elliott & Sons had a rousing big auction sale in their rooms on Tuesday, the sale lasting well into the afternoon. Cannas in flats are being offered now, as also all kinds of soft-wooded bedding plants.

A. Herrmann, florist supply dealer, East 34th street, sailed on the steamship Grosser Kurfuerst, April 30, for an extended trip to Europe, where he will purchase novelties for the Fall trade.

Miss Anna Roehrs, daughter of Julius Roehrs, Carlton Hill, N. J., will be married on the 25th inst. to Mr. Haufbrauen, a prominent fur dealer in New York.

Mrs. Jas. W. Withers, who was with her husband in Jamaica when he died, arrived home on Monday. The interment of the remains of Mr. Withers took place in Kingston, Jamaica.

R. H. James, grower of the "three-legged brand" of Harrisii lily bulbs, St. Georges, Bermuda, was in the city this week. Arthur Cowee, gladiolus specialist, Berlin, N. Y., was also a visitor for a few days. Mr. Cowee will plant 75 acres of gladiolus this season, 15 acres of which are finished already.

Mackay & Marr is the name of a new firm that has leased greenhouses at Winfield, L. I., and will grow plants for the wholesale market. Both the partners are former employees of John Scott, Brooklyn.

Chicago.

Jottings.

P. Reinberg is cutting some extra fine Triumph and Flora Hill carnations, and reports a fairly good season.

George Reinberg is cutting superior Bride and Bridesmaid; the latter are of extra fine color.

Wietor Bros. are sending in some fine Kaiserin Augusta Victoria and La France roses, from plants which they have kept dormant for some time. They have a large crop of short-stemmed American Beauty roses coming in from plants which were dried off some time ago, and cut back. These they intend to carry over for Summer cutting.

All the growers are busy planting out carnations in the field. This season will see the largest acreage that has ever been planted in this vicinity.

A. L. Randall has moved into his new store at 19 to 21 Randolph street. When he gets everything in shape he will have one of the finest wholesale houses in town.

Visitors in town included Wm. Kamp, Kenosha, Wis.; Mrs. Taylor and Mrs. Witted, Minneapolis, Minn.; A. Duebendorfer, Ames, Iowa; Prof. Duggar, Columbia, Mo.; H. Kranzke, St. Mary's, Ind.; J. Sawyer, Dundee, Ill.

ROBERT JOHNSTONE.

Philadelphia.

News of the Week.

The principal activity in business now is centered around the growers who produce large quantities of stock for planting out. In many places it is noticed that most of this stock is no so well advanced as usual. There are two reasons for this: Easter was rather late, and the flowering plants took up so much that other stock could not be potted on; then the cold nights have retarded the growth of Spring plants.

From present indications there wil be a great many more Liberty roses grown around here next season.

Seed houses who do a large mai order trade report that for some reason the bottom dropped out of the business the past two weeks. Probably the warm weather will brighten trade up again.

The recent cool nights have put lots of money into the hands of flower growers, the violet growers especially; for even on April 30 some very presentable violets were offered. It is certainly many years since such good flowers were offered at this date.

Eugene Bernheimer received about 4,000 General Jacqueminot roses the first four days of this week; they are selling well at from $3.00 to $12.00 per 100.

Chas. Price, of Lansdowne, has sold his ground. The greenhouses will be taken down. DAVID RUST.

Boston.

Ten members of the "Old Guard" surprised Wm. W. Edgar on his birthday Tuesday, and presented him with a handsome gold watch. Edward Hatch made the presentation speech.

J. M. Cohen, of Chapman Place, has made an assignment. F. J. N.

POUGHKEEPSIE, N.Y.—Our florists report an increase in the Easter trade of nearly 50 per cent. over that of last season. All carried a heavier stock and sold out clean by Sunday, 9 a.m. In the plant line, lilies, azaleas, spiræas hydrangeas and well-flowered Crimson Rambler and hybrid roses in pots were most in demand. Bulbous stock in pans and pots sold well. Cut flowers had a great call Saturday, with roses and carnations as first choice. Violets were in good demand and short supply. Prices asked were about the same as those in former seasons, with a slight increase in some lines.

P. T. DE VOY.

TOBACCO POWDER
THE BLACK STUFF FINE—For Sprinkling Only.
WHEN you cannot fumigate with our **Fumigating Powder** you can apply our **Black Stuff Fine** direct to the plants; it is strong and equally effective in doors or out for extermination of all plant pests. Your money back if it is unsatisfactory. Trial 5 pound package for nothing if you will pay the express charges on it. Write Dept. B. THE H. A. STOOTHOFF CO., 116, 117, 118 West Street, New York.

CHRYSANTHEMUMS

Exhibition Flowers and Growers.

There has been during the past three or four years a very great increase in the number of growers who cultivate a few chrysanthemums for exhibition, and the indications are that this class will continue to increase, as it is composed entirely of private gardeners whose employers are genuinely interested in the Autumn Queen, and who love to see their names in print as having won a first prize. While this increase seems at present to be confined to the Eastern seaboard, there is not the least doubt that the whole country will eventually be dotted with exhibition enthusiasts, as the desire for country homes increases among our rich men. With a country place comes the desire to beat your neighbor, if only in growing muskmelons.

The fact that the Chrysanthemum Society of America is making preparations for holding a mammoth chrysanthemum show in New York this Fall will give the exhibition growers a chance to spread themselves, and judging by the phenomenal buying of the latest novelties they are proposing to do so. A peep at the proposed list of prizes for the different classes shows that this will be unquestionably the largest exhibition ever held on this continent; and it will be to the everlasting disgrace of the Eastern grower if he does not take advantage of the opportunity to demonstrate for once what New York is producing in the way of exhibition plants and flowers.

The idea of each society in this vicinity contributing money to make special classes for their own members is an excellent one, as it will give small growers who do not have a sufficient number of plants to compete in the open classes a chance to exhibit in the classes for their own society; and the money that any society contributes will find its way back to its own members. The cry is often raised that the small grower has no chance when competing against the man who numbers his plants by the thousands; but this year, as every society has the privilege of making its own classes, it will be the grower's own fault if the classes do not suit him.

In addition to the restricted classes, which really form only a small part of the schedule, there is a large list of open classes for the free lance and the man who feels himself strong enough to cope with any of the big fellows. It ought to be a veritable battle of the giants, and my only hope is that growers will respond as generously as they should.

Commercially speaking, the chrysanthemum seems to have been overdone of late, judging by the prices obtained for the flowers; but from an exhibition standpoint the chrysanthemum has not yet begun to come up to its possibilities in America. We have the material, the growers and the money to produce shows the like of which could not be found in any other country, but so many growers leave their flowers home because they haven't the "sand" to risk a beating, and there is usually such a paucity of exhibitors in the big classes that it is small credit to a man if he does get a first prize. Again, growers often have a grievance because they think they don't get a square deal in the judging. It is true, once in a while some poor judgment is shown in awarding the prizes, but that is the fault of the judges and not of the society; and, furthermore, we are all too apt to think our geese are all swans.

Those exhibitors who are growing the Australian novelties for the first time will do well to remember that it is necessary in handling these varieties to catch the crown bud, as the later bud is worthless. This is, of course, true with the majority of exhibition varieties, but I know of none of the novelties (and I have seen most of them) that require to be taken on a terminal bud. They are, most of them, making splendid growth, particularly C. J. Salter, Lord Salisbury and Mrs. Thirkell and I think that some phenomenal flowers will be grown if the weather is halfway suitable for their final development.

It is time for the exhibition grower to be getting his plants benched, for no matter what may be said to the contrary, a chrysanthemum must have a good season of growth if deep, well-finished flowers are wanted. Any time during May is early enough, but it is well to plant as soon as the stock is ready, so that it does not become potbound in the least degree. A sturdy growth is essential; but this sturdiness should be natural and not obtained by withholding water from the plants or allowing them to become potbound.

In filling our benches we have always found it a good plan to run green sod along the cracks of the bench. This keeps the soil from filtering through, and yet is open enough to permit the surplus water to pass away freely, and as the sod rots away it furnishes good food for the roots. If bone meal is used it is well to mix it through the soil before planting; and this can be readily done when the soil is being cut down and prepared. If the soil is a heavy loam some leaf mould or burnt vegetable refuse will help lighten it up considerably. A free soil—that is to say, a soil that permits the water to pass readily through it—is far better than a heavy, clayey soil that will keep wet much longer. This will be felt more in the Fall when the grower is feeding his plants heavily with liquid. At that season the sun has lost much of its power, and when you water your plants, if the soil is heavy and retentive it will stay wet for a week or more and you cannot feed with liquid with nearly such frequency as you could had your soil been lighter.

Just as soon as your stock is planted you should use every endeavor to get it perfectly free from insects of every description. There is generally a rush of work just now, and if there is only a little green fly present the temptation is great not to bother with it, but to leave it for a day or two till you "get more time." Get your plants clean at once, and start right. This is one of the little things that often make the difference between success and failure. Let your plants be making perfect foliage from the first and not be crippled up half the Summer from the effects of green fly. It is certain that a crippled leaf cannot perform its functions so well as a perfect one. The successful grower must be a master of detail; in fact, that is all there is to chrysanthemum growing. Look after the details and success is certain.

IORA.

Chemical Manures for Garden Crops.

Speaking generally, all market gardeners are opposed to the use of chemical manures. While they recognize their efficacious action during the first and second year, they consider that they spoil the land, and render it unfit for use at the end of the third or fourth year. There is certainly force in this objection; but it simply proves the necessity of giving due weight to the physical qualities of the soil, and points to the fact that, in order to preserve its humus and the proper tilth, it is always necessary to have recourse to farmyard manure. The exclusive use of chemical manure has the drawback that it hardens and dries the land without supplying it with organic elements. Prudence demands that in the kitchen garden, where the state of the soil is so important, chemical manures should only be used in conjunction with the application of farmyard manure.

We shall now pass in review the different experiments which are capable of throwing light upon the rational composition of formulæ of chemical manures.

Universal Mixtures.

Some investigators have endeavored to find a mixture which may be universally applied to all vegetables. Several of them have obtained very satisfactory results by these means. M. Georges Ville recommended a complete manure composed as follows:

	Oz. per sq. yd.
Superphosphate of lime	1.18
Nitrate of potash	0.59
Nitrate of soda	0.89
Sulphate of lime	0.89
	3.55

This manure may be employed in all seasons, either before planting or sowing, or when the plants are growing. M. Zachariewicz, who has made some very interesting experiments on this subject, has also found a manure which, applied to various vegetables—radishes, onions, lettuces, carrots, cabbages, beans—gave, on an average, the best results. In accordance with the results obtained he gives a formula which differs little from that of M. Ville, of which it is but a simplification.

	Oz. per sq. yd.
Nitrate of potash	0.47
Superphosphate of lime	0.59

Dominant Elements.

Other experimenters, on the contrary, have endeavored to find a manure which is specially adapted for each vegetable. Chemical analysis enables us to find out which is for each plant the "dominant element," i.e., the element most necessary for its formation. We thus arrive at the following conclusions: (1) For leguminous plants the "dominant" is phosphoric acid and potash. (2) For leafy plants, such as salads, lettuces, chicory, corn salad or lamb's lettuce, sorrel the dominant would appear to be nitrogen. Spinach is also in this category, but it also requires a small proportion of iron. (3) The dominant in all solanaceous vegetables is potash. (4) All cruciferous plants, such as kohl-rabi, turnips, and radishes, require nitrogen and phosphoric acid. (5) Plants of the composite order, such as artichokes and cardoons, have nearly the same dominants. (6) Certain culinary liliaceous plants, such as asparagus, etc., require an abundance of nitrogen and potash. (7) Root plants may be included in the third group.

The study of these dominants has led the Marquis of Paris to the composition of the following formulæ, from which, as a rule, good results may be obtained:

1. For papilionaceous plants (such as peas and beans):

	Lb.
Nitrate of soda	7.71
Superphosphate of lime	6.61
Chloride of potassium	2.20
Sulphate of lime	4.40
Sulphate of iron	4.40

2. For solanaceous plants (potatoes, tomatoes, egg plants):

	Lb.
Nitrate of soda	2.20
Superphosphate of lime	8.81
Chloride of potassium	4.40
Sulphate of lime	4.40
Sulphate of iron	4.40

—M. Vilmorin, in Journal of Royal Agricultural Society, reprinted in The Garden.

BOWLING.

BOSTON.—Monday (Patriot's Day) the florists' bowling team visited Cohasset in search of revenge for the two previous defeats received at the hands of the Cohasset team. A fine fish dinner was served on arrival, after which bowling was enjoyed for several hours. The games resulted in a three-time win for the florist team. Candlepins were rolled.

F. J. NORTON.

The McKellar & Winterson bowling team went to Joliet and rolled a matched game with the Chicago Carnation Co.'s team, Saturday night, April 25. The visitors were badly beaten, but took it with good grace. After the game the home team took the visitors to Hobb's Cafe and gave them a royal banquet which lasted into the wee sma' hours. A challenge was given and accepted to play a return match. This game will take place on Saturday, May 9, at Chicago. Besides the bowlers, Fritz Bahr, of Highland Park, Anton Then and your scribe were present. Below is the score:

Canadian News

OTTAWA.—Firing is still kept up. Fine, warm, sunny days, but frosty nights. Greenhouses have recovered from the Easter clearing out and are again filled with repotted bedding stock. There is an extra supply of geraniums. Lilies, the only left-over stock at Easter, have not gone to waste owing to several funerals calling for large designs. All have now some fine houses of carnations, showing a big crop without red spider or spot. Glacier is a sight—ahead of all other whites. This is certainly a great all-round carnation. Young stock is looking fine. Wright, of Aylmer, is planting his out, as he believes in giving them the early Spring weather—a very good plan if it was not offset by the fear of that early May frost which we got last year to the tune of 8 degrees.

Roses are very good stock at the present time, the demand for both them and carnations being very brisk. Bulbous stock is cleared out completely. Lily of the valley continues one of the best selling articles.

All have received their stock of the Pierson fern; and in our case we are agreeably surprised at the good quality of the plants. Quite different is the case of carnation Enchantress; the stock of it received was disappointing.

E.

LONDON, ONT.—Roses, American Beauty, $4.00 to $20.00; Bride and Bridesmaid, $5.00 to $10.00; Golden Gate, $5.00 to $10.00; carnations, inferior grades, $2.00; standard varieties, $3.00 to $4.00; fancy varieties, $5.00; daffodils, $2.00 to $3.00; lilies, $5.00 to $10.00; lily of the valley, $2.00 to $3.00; narcissus, $2.00 to $3.00; sweet peas, $1.00.

Roses are plentiful and of good quality; sales are a little slow and stock is accumulating. Carnations are still short, only about 50 per cent. of orders being filled. Bulbous stock is over and it is a relief to see the last of it. Plant sales continue good and from the optimistic views entertained by florists all over the country, prices are likely to be higher than for some years past.

Buffalo.

Jottings of Interest.

J. F. Cowell, of the South Park Botanic Gardens, who has been laid up more or less during recent months with rheumatism, is again actively overseeing matters. The Albright conservatory structure that had been presented to the city by the owner, J. J. Albright, of this city, has been erected on the former site of the growing houses and soon will be opened to the public. Chrysanthemums will occupy same from now forward. In the large general conservatories proper, the collections of anthuriums and fancy caladiums are brilliant and attractive. The musas, which are given a prominent position and space, have developed to large proportions. Appropriations from the municipality, for this year, promise to be of a larger amount than in recent years, so much needed work in general maintenance will no doubt be accomplished.

The prize list for the chrysanthemum show to be given this year by the H. A. Meldrum Company, a department store firm, is in the hands of the executive committee of the Buffalo Florists' Club, which body is co-operating in the matter to the extent of lending influence in managing details. The classes will be rather limited in number, but given to prizes of goodly amounts. No firsts less than $10.00 and some will be as high as $50.00. Some classes in cut roses and table decorations will be features. Chas. H. Keitsch will assume general management, including that of advance promoting details. VIDI.

East Aurora, N. Y.

It naturally becomes a pleasure to visit a place that seems run about right and on intelligent lines of management. Such is that of Wise Brothers, in this town, which as a suburb of Buffalo is rapidly growing, and to the result of an increasing retail business with this firm, though more or less of their high quality blooms are still disposed of at wholesale. Several houses of Imperial double violets were a noted success this season as regards quality and productiveness, commanding good prices, too. Quite a variety of carnations are on the benches. In white, Queen Louise proves a decided favorite, for profitable results. The soil here seems too light for The Marquis. Harry Fenn, J. H. Manley, Cressbrook and Dorothy have given good results, with Mrs. Lawson in every way satisfactory. A red seedling, once flowered, so far shows such good results as to justify a thorough trial. VIDI.

Batavia, N. Y.

Excepting some of his carnations turning out hardly profitable as a result of defects going with the stock out-of-doors, Paul Liebsch, of West Main street, has run his houses to good capacity this past season. His blooms are disposed of largely at wholesale, though the retail home trade begets attention. The prices realized this Winter were in the main satisfactory. Mignonette has been a specialty, now to be followed with bedding stocks. He recently purchased the ten-acre property on which he is located, and which from a real estate point of view looks like a profitable investment.

VIDI.

Utica, N. Y.

The News.

Peter Crowe is getting along finely in building his new place now after having had some little trouble with the striking carpenters which are all out here.

Frank Baker, president Utica Florists' Club, and Mr. Wilcox left this week for New York and vicinity to visit the growers. At out next meeting we shall hope to hear something of their trip.

T. A. Lord, of Lord & Burnham Co., was calling on the trade on Thursday last in the interest of building and ventilators.

Planting out here has not commenced as yet to any extent—too cold. We are having heavy frosts about every night.

We are to have a fine lecture, or illustrated talk, on plants by Professor Geo. C. Hodges at our next meeting, May 7. This should bring out every member of the club. At this meeting will also occur the election of officers for the ensuing year.

I hear that H. H. Nicholson, of Trenton, N. Y., will add two more houses to his plant this Summer. He grows carnations for the market.

I understand that J. T. Taylor, 196 Albany street, has sold his place and will move to Denver this Summer.

G. McGowan is bringing in some of the finest sweet peas seen in this market.

I saw at C. F. Seitzer's a very fine strain of pansies, and some grand white double petunias. E. F. Quinn, of Norwich, was in the city a few days ago. He says he is doing a fine business. He also remarked that he would have to join our florists' club, and we will put him through next meeting. We are bound to get in our club all the first-class florists within a radius of fifty miles; and we do not know but we might extend as far as Syracuse, as they have no club there. Our club was never in such a flourishing condition as at present. QUIZ.

[We are glad to hear it. Perhaps "Quiz" may tell us the cause of this gratifying condition in a future issue. —Ed.]

Springfield, Mass.

Dennis F. Murphy, formerly manager of the Murphy Company, florists, has severed his connection with the store, to accept a position in Boston. The store is now in charge of John Bolt.

PARKERSBURG, W. WA.—J. Dudley & Son say: Easter sales in cut flowers and plants, as well as prices obtained, exceeded those of any Easter we have had before.

THE AMERICAN CARNATIO
Ready for delivery.
THE FLORISTS' EXCHANGE, 2 Duane Street, N.

Cincinnati.

ings.

We have only one complaint to r this week, and that is, that stock o scarce. Of course, the weather is blame, still we should not really plain, as this has been the best the florists have experienced in a time, notwithstanding the high e of coal and the unjust extra ges of the express companies.

M. Altick, of Dayton, O. (a sub- of Cincinnati), had an exciting ex- ence last week. Mr. Altick had attending "lodge," and upon his rn home at midnight found three glars ransacking his dining-room. showed his nerve by tackling the ch. Calling to his wife to bring his shotgun, the burglars took the and succeeded in putting two holes ugh his overcoat. They then made r escape. At last accounts blood- nds were on the track of the in- ers, and enough evidence had been red to swear out warrants for their st.

r. Ford, representing A. Hermann, York, was a caller.

m. Turner, foreman at the Park nhouses, has received his release; r changes in the Park Department r liable to occur. E. G. GILLETT.

Louisville, Ky.

s Notes.

Those florists who make a spe- y of bedding are now very busy, cially such as are situated near the ipal cemeteries.

iss Josie Schuh, with F. Walker & is ill with typhoid fever. Her erous friends in the craft wish her eedy recovery.

orge McKellar, a new-comer ng us, has opened a store on Mar- street, between Eleventh and lfth, for the retail sale of flowers. location is outside of the business r, and his experiment is being hed with much interest. Mr. Mc- ar is a brother of the well-known s. McKellar of Chicago.

cob Schulz had the misfortune to a valuable horse this week. While red near where Mr. Schulz was ng his carnations planted in the . the horse in some unaccountable ner became entangled in the rope, wing itself and breaking its back.

r. Endtz, of Endtz, Van Nes & Co., and, was a late caller, but seemed sfied with his success here.

A. R. B.

Cleveland.

s Notes.

The planting of carnations is the st this year that we have had for ng time; the continued cold and wet ther being the cause. But this k will see most of them planted.

ade has been very good since ter, and prices are yet at the holi- mark. Some lines of stock are hard to get. The F. R. Williams pany and Bate Bros. are sending in finest roses seen this season. Out- stock is coming in quite freely and ng better than in other years.

sper Aul, who was hurt in an ac- nt on the Saturday before Easter, etting along very nicely and is able e around some of the time.

lp in this city is at a premium and ot be had; big wages are offered out anyone to accept.

dding plants will not be in over- ply this season, and if the growers alive to their interests the prices be better than formerly.

Lapeer, Mich.

Arthur Watson returned from Chicago, April 15, and entered into partnership with his father. The firm name will now be W. H. Watson, Son & Co. The concern will devote 35,000 feet of glass to carnations, the balance of the 50,000 feet to propagating roses, asparagus, smilax and a variety of stock in lesser quantity.

This business had its origin in a soap box half full of sand, a few unrooted cuttings inserted and covered with an old four-lighted window sash. This was over 20 years ago. It now occupies, besides Mr. Watson's residence property, one and a half city blocks, house and barn, and over two acres devoted to growing carnation plants. The 50,000 feet of glass are heated by steam from a 150-hp. tubular boiler. A 100-hp. boiler is held in reserve for emergency

St. Louis.

The Week's News.

This is dedication week in this city, and our florists expect good trade in their line. With President Roosevelt, ex-President Cleveland, hundreds of prominent men from all over the country and other visitors by the thousand, attracted here by the World's Fair dedication, this should make us all hustle with receptions and dinner parties. A great many orders are already booked.

At the seating of the new members of the City Council the past week the desks of most of them were decorated with handsome bunches of American Beauty and other flowers.

The plant men at Union Market have had a very disastrous week, the weather being cold and wet. Many of the stands were closed up. The prevailing Spring-like weather has changed conditions considerably.

I called on some of the big seed houses and every one was crowded with buyers. From the looks of things all are doing a rushing business.

The Mayor has as yet not sent in the name of the new park commissioner with his other appointments, and the florists that are looking for the position of superintendent of parks, under the commissioner, are waiting to send in their applications to the new commissioner.

We read in the Edwardsville news in the daily papers that Fred Ammann was defeated for the office of Mayor; only a few votes were lacking to change his name from The Perle King to the Hon. Mayor of Edwardsville.

Fred Foster is making a great show Boyle and Maryland avenues, reports that trade has been very good in both cut flowers and plants. Fred has a very pretty store and a good location, it being in the best residence part of the city.

Fred Foster is making a great show of American Beauty in his window this week, and reports business first class.

The Riessen Floral Company report that they have been very busy since Easter with decorations and lots of funeral work. They have quite a number of receptions booked for this week.

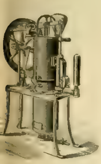
Effect of Electricity on Plant Life.

It has ever been a matter of speculation with me just why a rain will help plants so much more than any form of artificial watering. The popular theory is that when water is applied to vegetation by the latter method the heat of the sun causes a kind of steam to form, which scorches it. This is obviously incorrect. My own conclusion is that rain stimulates the plants on which it falls because it is charged with electricity, and that the mere wetting of a plant has little effect on it. A few weeks ago I was reading of an experiment that confirms my view, and incidentally suggests an idea which, if carried into execution, might prove of universal value. It appears that some experimenter passed a current of electricity through some pots in which plants were growing, with the effect that they showed a decided gain in size and fertility over those not so treated. The difference, if I remember aright, was forty per cent. Now, why would it not do to apply water electrically charged to the vegetation, and thus simulate as could be Nature's method? The water could be placed in a vessel from which the electricity could not escape—an insulated barrel, for instance, or a pail bottomed with rubber or glass. After the water was charged it could be applied with the aid of an ordinary rubber hose, with a nonconducting nozzle, and that would be all that was necessary. Now, I am not an electrician, and have not the means of trying this experiment myself; but if some experimenter would follow my suggestion, I believe discoveries of great practical value might be made.—C. Haley (in "Scientific American.")

ALPENA, MICH.—William Jones is contemplating improvements and the building of an extension to his greenhouses. He has disposed of his fruit farm, and will devote his entire time to the cultivation of flowers.



WATER
RIDER AND ERICSSON
Hot Air Pumping Engines
If water is required for household use, lawns, flower beds or stables, no pump will pump it so safely, cheaply and reliably. No danger as from steam. No complication as in gasolene engines. No uncertainty, as in windmills. Prices reduced. Catalogue "X" on application.

FOLEY
CAST IRON
GUTTER
This cut is not full size. We make two sizes: 2⅞x5 inches and 2⅞x6½ inches, inside measurement of waterway.
No rotting at the ends of bars. The end wood is not punctured. Bars always have erfect bearing, and the drip falls free into drip conductor.
Your bars will last five years longer than on old style gutters. The lugs through which e screw fastens the bar are cast on the gutter.

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

ol. XV. No. 19 | NEW YORK, MAY 9, 1903 | One Dollar Per Year

you want the best paying crop that you can plant for Summer, plant

HE PIERSON FERN

(Nephrolepis Piersoni)

There is nothing you can plant that will increase in value so rapidly as this. The and has been so great and our advance sales so large that we have not offered it ntly, having only just completed filling our advance orders. We have a nice lot of ng stock coming on, and can fill all orders received from this date promptly on receipt.

Even at the present high price it has been impossible to keep up with the demand, there is sure to be a tremendous demand for it another season when it can be offered ower prices. **Now is the time to invest** in it and get the benefit of the endous demand and good prices which are sure to prevail another season.

The **BOSTON FERN,** although it has been cultivated many years, is still scarce. Nephrolepis Piersoni will sell better and be in greater demand even than the Boston , we predict a scarcity of Nephrolepis Piersoni for several years to come and at big es. Owing to the great and continued demand, we do not expect to be more than to meet the demand this spring, so that customers can rest assured that there will o change in price this season.

offer strong young plants in 2¼-in. pots, at $9.00 per doz.; 50 plants 30 cts. each; 100 plants at 50 cts. each; 500 plants at 45 cts. each; 1000 plants at 40 cts. each.

ra large plants, 6-in. pots, $27.00 per doz.; 50 plants at $1.80 each; 100 plants at $1.50 each.

These large plants will make fine stock for growing on into large specimen trees for fall le, and they are also very nice for immediate sales.

R. PIERSON CO., Tarrytown-on-Hudson, New York

ROCKFORD, ILL.—The Buckbee Seed Company has broken ground for the erection of a new four-story building, of stone and brick, covering 180 x 60 feet.

FRENCH BULBS. We are advised, says the Horticultural Advertiser (Eng.), that buyers will do well not to be too hasty in placing their orders for Roman hyacinths, these are at present quoted 20 per cent. dearer than last year's prices and seeing how badly last year's bulbs bloomed, retailers will have great difficulty in advancing their prices without materially curtailing their sales, added to which the 20 per cent. rise is not warranted by the state of the crop, and prices will probably fall next month.

Seed Growing on Long Island.

It is an axiom that extremes follow each other; that drought and deluge, heat and cold, prosperity and adversity, follow each other, about as surely and regularly as night and day. These strange contrasts present themselves visibly, in the appearance of the seed crops this year, in comparison with those at the same time last year. Last year there was a feast, now a famine threatens us.

The cabbage seed crop is about the only one of importance; at least it is the leading one in this section. Last year it was nearly, if not fully, three times an average one, which was to a great extent taken up in filling the deficits of the two previous years, which enabled the dealers to lay in a part of what might be required in case of another deficiency. A wise precaution, as, with the exception of a few kinds that are now held from last year's surplus, the prospect is indeed poor.

There was fully as much contracted for this as for last year's crop. One-half or nearly that, did not, owing to unfavorable climatic conditions, make a growth with sufficient vitality to winter over. And when the trenches

HIRAM T. JONES, Union County Nurseries, ELIZABETH, N. J.

were opened this Spring very much, even of the best grown stocks, were found to have rotted badly. What survived were set under the most favorable conditions; since then the cold, dry weather has prevented the plants making other than a stunted growth, which is most unfavorable for a seed crop. Those most familiar with the industry do not expect half a crop from the plants set; or about one-fourth of an average crop; and it will require the most favorable weather from this time forward to produce that. All crops are suffering from cold and drought.

Kale is also a crop of considerable importance here, and is now suffering from cold and drought. It wintered finely and gave promise of a large yield, but it is now coming into flower and not half as tall and branching as it should be. The Siberian is looking better than the Scotch.

Ruta bagas are much in the same condition as the kale—backward and spindling. Unless we have rain very soon these crops will be very light.

Spinach has hardly made a start and cannot until we have rain. It is, however, too early to make predictions regarding spinach, as favorable weather will give us a crop.

European Notes.

It is with regret that I am unable to chronicle any better news from our side this week; on the contrary, matters appear to be growing worse and the cold spell farther than ever from ceasing. There has been, at the same time, in most districts, an absolute drought for three weeks, which at this season is very serious.

Since the beets were planted in the west of France no rain has fallen, and the roots have either withered or rotted as a result of being frost-bitten; the whole district having been visited by frosts for quite fourteen days. Cabbages and turnips in the same district are also suffering badly.

Many fears are arising in regard to the English cabbage crops. The weather is entirely opposed to fertilization, and as a consequence many plants are running blind; the blossoms falling early and leaving no pods. The frost, also, is severely punishing them, for being full of sap they were only a too easy prey to the cold night frosts.

Turnips and Swedes on all sides are having their heads cut down and blackened, and many of them have been practically killed. A few growers have already cut off the tops, but I fear they have commenced too soon and may now lose all by exposing an open wound to the enemy—frost.

So far south as Italy night frosts have prevailed and the proverbial oldest inhabitant cannot recall such weather at this time of the year. Sowings of zinnias, balsams and other annuals; tomatoes, egg plants, peppers, etc., which were made at the beginning of April and doing well, have all been destroyed, and are now being resown three weeks later. Plants of centaurea, godetia, etc., planted out at the same time, have been very badly punished, and crops will necessarily be somewhat shortened.

EUROPEAN SEEDS.

German Seed Notes.

The month of April has been very unfavorable up to the 23d in the seed center of Germany. The early and Summer radishes, as well as the Autumn and Winter sorts, also cress, onions sown for next year, several sorts of cabbage and spinach, have all suffered from the night frosts, more or less, according to their degree of development. The early flowering fruit trees were also badly hurt in many districts of the Empire.

For two days, on the 19th and 20th of April, a very heavy storm swept over Germany and did much damage to trees. Many growers had their cultures of turnip, Swedes, and kohl-rabi destroyed, and are to plow them under. New sowings will, of course, be made as far as possible.

GERMAN SEEDS.

Bermuda Lily Notes.

F. H. Henry, of the firm of Henry & Lee, bulb importers, arrived in New York on Saturday from Bermuda, where he has been looking over the fields of Lilium Harrisii. It is Mr. Henry's opinion that the current crop of L. Harrisii bulbs will be 25 per cent. less than last year, though the quality will be fully up to last year's standard. The disease is being eradicated and it is noticeable that the bulbs in the fields have flowered earlier than usual this year. Forcing bulbs will be ready for shipping to New York by the first boat in July.

Mr. Henry further stated that the prices for good quality bulbs will undoubtedly be firm, while mixed or blighted stock will be easier in price. When asked about the blight, Mr. Henry stated that as that disease only occurs when the lilies are well advanced in the field, the foliage only suffers, and the bulb is not materially injured for forcing purposes.

The plants of growers who spray their fields with Bordeaux mixture do not suffer at all from the blight, but where such spraying is neglected it is found that when the lilies are partly grown, and there comes a warm foggy night, the blight strikes the plants immediately, and the foliage loses its color. From what we could gather, it seems that while the blight does not affect the bulb for forcing purposes, the reproducing qualities are impaired.

Mr. Henry also informs us that the Bermuda growers have discontinued the practice of disbudding the lilies while in the field. It seems that for some years disbudding had been practiced with the idea that the bulbs were benefited by the operation. It is now thought, however, that the bulbs are better when harvested, if the flowers have been left to mature on the plants; and all the growers are following that method this season.

Clucas & Boddington Co., New York.

This energetic firm of seed, bulb and plant dealers has recently purchased a piece of property at Sparkill, N. Y., for the further development of its constantly increasing business. It is but a year ago when we mentioned the fact that Clucas & Boddington Company had moved from its Fourteenth street store to more commodious warerooms, at the corner of Jane and Greenwich streets. The volume of business done during the past year has shown a great increase over that of previous years, and has practically demonstrated that the move to the present location was not made any too soon. The store and warehouse room is utilized to the fullest capacity, and it would have been next to impossible to have handled the firm's present extensive trade had the change in question not been made.

It is some months since the firm decided that a nursery and trial grounds would be a useful adjunct, and at last the concern has been fortunate enough to secure the Worth estate at Sparkill, N. Y. This property consists of upwards of thirty acres of choice farm land, with two dwellings and many serviceable outbuildings erected thereon.

Some 50,000 gladiolus have already been planted; and a regular nursery for herbaceous plants will be established as fast as time will permit.

Deciduous and evergreen nursery stock will be added when the season for planting such stock arrives.

There is a beautiful residence on the estate, and this will be the home of Mr. Clucas and his family after July 1.

Charles A. Ilgenfritz, Monroe, Mich., President.
. S. Lake, Shenandoah, Ia., Vice-President.
orge C. Seager, Rochester, N. Y., Secretary.
L. Yates, Rochester, N. Y., Treasurer.

Governor Pennypacker, of Pennsylnnia, has vetoed a bill which sought establish a division of horticulture the State Department of Agricul-re. The bill provided for a chief of e division at a salary of $2,500 anually and a clerk at $1,500.

LE MARS, IA.—The Gateway Nurs-y Company, with a capital stock of 0,000, fully paid up, has been organed in Le Mars to succeed the Fairont Nurseries. The new company ok charge of the business on May 1. he incorporators are: Pierce Bechtle, e Mars; C. A. Stils, Cherokee; W. L. echtle, O. M. Bechtle and G. W. Bol-r, of Le Mars, and the above named corporators are also the directors the company.

Pierce Bechtle, who has built up such successful nursery business here, will the manager of the nursery and C. . Stils, of Cherokee, will have charge the field work, which will employ om thirty to forty men and widen e territory so as to cover Iowa, orthern Nebraska, the Dakotas, Minsota, Southern Wisconsin and Northn Illinois.

Leaders to Conifers.

A little attention to conifers at this ason, when their new growth is push-g, will result in getting good, straight aders to many of them instead of ving them with double ones. Nearly customers prefer trees with single aders when the subject is an ever-een. Taking pines, for illustration, hen the new shoots start from the ntral one, often three or four will pear, all of about the same length. nch off the points of all but the most ntral one of the batch. The one unuched will be the leader, the others coming side shoots. Many other evereens can be made of almost any de-ed form by attention to the pushing oots at this season.

ghtening Soil About Newly Planted Stock

An important matter, and one often erlooked, or its importance underesnated, is the tightening of soil about eshly planted trees. The laborers emoyed by nurserymen in planting time ve no idea of the importance of this atter, and unless investigated it cant be known whether the planting be ell or ill done. But a loosely set tree in no condition to thrive, even though does not die. It is a proper thing do now to go over the various rows set out stock with a rammer, makg firm the soil and securing the tree an upright position at the same time.

Cedar of Lebanon.

The cedar of Lebanon, with the Mt. las cedar—atlantica—are perfectly rdy with us, and, indeed, the same ay be said of the deodar, for though leaves are sometimes lost in severe inters, its branches are not. The inter past took the leaves from ex-sed branches, but not from others. In pearance the deodar is more graceful an either of the others.

Would not florists find a good sale r the cedar of Lebanon in pots, beuse of its historic associations? Nur-ymen find this so. Plants of about ree feet in height sell well, being sily handled, and of a size to make me appearance at once on a lawn.

Oddities of the Season.

The early opening of Spring this year l everyone to think we were to have wers of all kinds in evidence long be-e their usual time. I think it must ve been a score or two of years back ce the weeping willow was in leaf the 20th of March, as it was this ar. Lilacs pushed into bud in March, d promised an early display. The ange part is, that in spite of this rly start, lilacs are not in bloom yet, d at this writing, April 28, it looks as this shrub will lose its good name never failing to flower by the first May. On the sunny side of some shes a flower or two may be open in next two days, saving its reputan, but on our bushes there will be no bunches fit to cut. On the other hand, fruit trees, such as apple, pear, peach, plum and cherry, are now in full display, preceding the lilac, which is an uncommon occurrence. In my own garden is a Staphylea colchica with flowers well expanded; and for it to precede the lilac is something unheard of. Is it that having started so early the lilac felt the shock of the freezing night or two which came later more than the other trees and shrubs did, not so advanced?

Japanese Wineberry.

There was so much disappointment experienced bv those who bought the Japanese wineberry years ago, expecting to possess a valuable fruit, that it caused many nurserymen to discontinue growing what is really a very pretty ornamental bush. To speak the truth about this bush, it is far from being without merit as a fruit. It bears large clusters of white flowers with red calyxes. After the berries form they remain enclosed in the calyx until the fruit is ripe, when they reflex, showing their bright red fruit. There is not as much of substance to the berries as there is to ordinary raspberries, but there is enough to make them worth the gathering; and their taste is very pleasant. When William Falconer was at Dosoris he had a little plantation of this rubus which yielded fruit which he found very satisfactory to him.

Its ornamental features certainly entitle it to a place with shrubs. It makes canes every year, much as common raspberries do. These canes are thickly beset with rose-colored hairs, which are hardly stiff enough to be called prickles, and this feature alone is sufficient to bespeak for it a prominent place, it is so ornamental. The clusters of fruit are also embellished in a similar way, the whole really compelling our admiration.

The name of this plant is Rubus phanicolasius and, as with others of the rubus family, the old canes should be cut out every year at the end of Summer.

Memorial Day Flowers.

Aside from greenhouse flowers and those from herbaceous beds, cut shrubs find a great demand for Memorial Day; and two kinds—the snowball and the weigelia—lead all the others in the appreciation of the various post committees sent out to beg or purchase flowers. It is not much encouragement to the florist to know that his neighbor the nurseryman is giving away his cut shrubs to these committees, but it has been the custom in some communities ever since the war for nurserymen to give the G. A. R. a free foot in their nurseries on that day, and no doubt it will last until the passing away of the generation that was of the war days.

City posts are less fortunate than those in the country, and a great deal of money is spent by them and their friends in the purchase of flowers. The demand for flowers or shrubs is very great. A spray of weigelia, or of Japanese snowball, is a good background for other blooms, and for this reason these are much called for. These two kinds might be grown by florists. A dozen or two bushes would occupy little room and would yield lots of flowers. It is already too late to set out such shrubs in this vicinity, but plant them early in the Fall, and some flowers would be had for next season.

The two kinds of snowball should be planted—the old kind, and the newer one, the Japanese. The former perfects its flowers a week earlier than the other, and this gives assurance usually that one or the other will hit the season right. The Japanese is preferred because of the long, flower-laden branches it affords. The Japanese snowball pushes into leaf early in Spring, and rather than plant it after it has pushed, it is better to defer the work until early Autumn. It will not succeed set late in Spring.

News Notes.

The season is very backward, th nights severe. It was not until to-day the 5th, that it was really safe to plan out carnation stock. The plants tha were put out the fore part of last wee were killed. One night the temperature dropped as low as 22 degrees, injuring tulips, hyacinths and even pansies in exposed locations. Fruit tree throughout the State suffered severely It is reported on good authority tha at least 40 per cent. of the fruit crop i destroyed. Strawberries were, as a St. Joe, a total loss. In some localitie they escaped.

Henry Smith is hurrying along hi building operations as fast as a larg force of help will allow. The boarding house is located on the south side Bridge street, so as to be beyond th reach of another fire, should one eve again occur.

Crabb & Hunter are building a propagating house, 16x200 feet, of wav skylight glass. It is not only cheape than the double strength glass, bu more suited for the purpose, letting i a strong light, yet excluding the ray of the sun. It is good glass for pal houses. This firm's range of fou houses, each 29x200 feet, is well unde way. They are using the Garland iro gutters, Quaker City ventilating apparatus, cedar rafters and ventilato from A. Dietsch & Co. The houses wi be modern in every respect. America Beauty roses and carnations will b grown.

Recent visitors included A. Vaughan, A. Blome and S.S. Skidelsky also several Dutch bulb men, with unpronounceable names. They should b numbered. G. F. C.

Washington, Pa.

The Washington Floral Compan which was recently organized with capital stock of $10,000, and which ha purchased the John McBurney far east of Washington on the Monongahela pike, has received its charter ar the work of constructing the greenhouses and other necessary building is being pushed to speedy completio The work is well under way, and wi good weather it is hoped to have everything completed by the first of ne September. Seven greenhouses, eac 150 x 100 feet, are being constructed. Just as soon as the promoters g matters in running order attention wi be directed toward utilizing the re of the 40-acre tract, which is ferti and in a high state of cultivation. is the purpose of the company to s out a large bed of strawberry plan and other small fruit. Later they wi commence the setting out of fruit tree such as cherry, peach, plum, apple, et

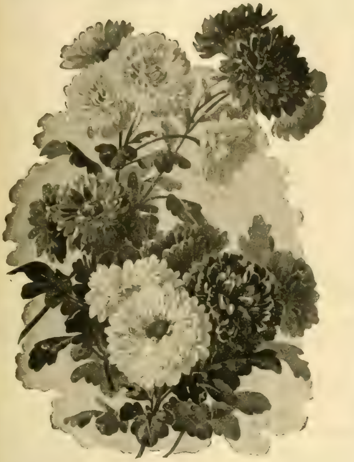
CHRYSANTHEMUMS



Mr. Grove P. Rawson's report of the Elmira, N. Y. Show, FLORISTS' EXCHANGE, November 22, page 1326:

R. Vincent, Jr. & Son, White Marsh, Md., sent a collection of outdoor-grown pompons that was a record breaker—some sixty varieties; and the best lot I ever saw at any chrysanthemum exhibition. More interest was manifested in this charming display than in the omnipresent Timothy Eaton and Col. D. Appleton. The demand for these plants is steadily increasing for planting in the herbaceous border, and among shrubbery and evergreens.

I compliment you on having such a fine selection of Pompon Chrysanthemums.

A. HERRINGTON.
President Chryanthemum Society of America.

HARDY POMPONS

Agalia, light pink, shaded deep orange.
Anna Mary, creamy white, tipped pink.
Bridesmaid, light pink, dark edge.
Bob, delicate pink.
Blushing Bride, early light pink.

Sample pages, giving synopsis of contents, mailed on application

The Benefits of Observation.

The daily routine work of the gardener may seem tedious and monotonous to the casual observer, or to the novice, but there is hardly any better opportunity for intelligent observation and study than the regularly repeated watering, cleaning, picking of flowers, and other handlings of the plants which are entrusted to one's care; and if any interest at all is taken in the work it will soon be found a source of keen pleasure.

When given charge of a range of propagating houses in a large nursery in France, your correspondent, after thoroughly cleaning and rearranging a house in which a collection of exhibition araucarias was grown, asked the proprietor what work should be taken in hand next. He said: "You have done this very well, and I want you to go over all the plants again and rearrange them." Noticing my astonishment at the paradox of his words, he added: "I want you to get well acquainted with each of these plants, and you cannot do that better than by handling them often."

I have since found the truth of this good advice. If a gardener has once learned to make observations he will soon find many points to make comparisons, to draw general conclusions. By a chain of simple observations he will be able to determine the cultural requirements of the plants, and not only become an intelligent and successful cultivator, but find pleasure even in the seemingly monotonous manual labor which the growing of plants involves.

This is, of course, nothing new to the readers of the interesting columns of The Florists' Exchange, but it would be highly instructive and assuredly very interesting if some of the many experienced cultivators would tell us how their observations have led them to the rational methods of cultivation which have brought about their success; it would be one of the best possible lessons to beginners.

If your correspondent adds a little story of his own experiences it is only in the hope that it may induce abler pens to take up the subject. One of the most interesting observations I had occasion to make was on the Phœnix, date palm.

The culture of the phœnix, during its growing season in a hot bed, requires frequent syringing, without which it cannot be kept clean of insects. Now, if the thorough syringing is repeated twice or three times a day it takes the place of a watering at the same time; for the water which falls on the leaves is carefully guided from the pinnæ to the rachis and down the furrow of the rachis by the stem to the roots. This seems to be of little importance when the plants are under careful cultivation; but not so when they are left to take care of themselves, where they grow outside, as I had occasion to find out on the coast of the Mediterranean Sea. The most striking difference between these palms growing in our greenhouses, or conservatories, and growing outside, is their disinclination to form a stem under artificial cultivation, while under natural conditions they make stems very rapidly, and the more so the more they are exposed to the scorching sun, or the poorer the soil is in which they grow; the latter is especially very noticeable, and was an interesting link in my observations.

In the beautiful beech forests of my native country, on the Baltic Sea, in northern Germany, I had learned to look upon the tall, straight stems of the crowded trees as a result of the struggle for a place in the sunlight. A chance observation, while felling a tall date palm, revealed to me the mission of the stem of the palm in question; also as a means to overcome the adversities of the climate or its environment, but in a different manner altogether. It is the lot of the date palm to grow in a clime where the supply of moisture is very irregular, and where the sun heat is the most intense, when the plant, had it to rely altogether on the moisture of the ground, would be the least able to find a supply. But the date palm has proved itself equal to the emergency; it has, one might be inclined to say, intelligently forearmed itself; in spite of the scorching sun it carries its head boldly upright. True, wisdom grows with age, and even a young date palm seems to need a harder lesson than a good example, for we see that only as the plant matures does its adaptation to the severe climatic conditions develop—in the shape of a stem. This stately stem, from which the ancient architects obtained their inspiration when they modeled the classic columns of their temples, is a well-prepared water reservoir, and can teach us the prudence of providing for a rainy day.

The stem proper is surrounded by a thick coat of woody material, the remnants of leaf stalks intertwined with the fiber, which once served to protect the leaf in its tenderest youth. Long since have these organs ceased to fulfil their primary duties; but they are not shed, because they are not past usefulness. When the leaves grow old, dusty, storm-beaten and scorched they gradually curve downward, and piece by piece is destroyed until the short hard base of the stalk remains. By the downward curve of the leaf these remaining ends are turned outward, away from the stem, and leave a good opening from the top. As one leaf after another passes through this process the remaining pieces gradually form the firmly coherent bark-like coating which envelops the stem proper. When rain falls on the leaves, or the heavy dew which is peculiar to these climes is deposited on them, they carefully guide the waters down into the opening between the stem and its coat. The inner layers of the dead material are transformed into a spongy matter by the influence of the moisture, which makes it admirably fitted to retain the water; and as the outer layer remains intact, the entire stem of a date palm is thus surrounded with a reservoir of moisture. In order to make the food thus provided available to the plant the stems send out a lot of rootlets into this spongy, damp compost.

Thus hidden from man's eye, and well protected against the thirsty sun, has the plant insured itself against a possible want of food.

Under artificial cultivation, when the gardener provides plenty of food, there is no necessity for this natural reservoir, and we need not wonder at the reluctance with which it is formed; and when the palm is planted in rich soil of the Italian gardens it shows the same disinclination to form the stem which characterizes the same palm as it grows on the African coast, in a sandy, poor soil. T. E.

Peter Barr, V. M. H., who has been on a globe-trotting tour for four or five years past, is expected home in London this month. The veteran should now write a book on his experiences, and what he saw of horticultural interest abroad, which, to judge from his several communications to the technical press, must have been a great deal.

NEW BOOKS.

The AMERICAN CARNATION—How to Grow It. By Charles Willis Ward, Cottage Gardens, Queens, N. Y. Publishers, A. T. De La Mare Printing and Publishing Company, Ltd., New York. Price, $3.50.

In previous issues mention has been made of this valuable work, and a general idea of its scope and character outlined. The book has now made its appearance in completed form, and the author and publishers are to be congratulated on its excellence, both from the viewpoint of high-class bookmaking and the pre-eminently practical and serviceable nature of the contents.

The whole subject of carnation culture is completely covered, and that the work has been done thoroughly will be readily admitted when it is stated that the methods which have placed the author in the position he occupies as one of the most successful carnation growers in America are given in detail; these being supplemented by the practices of other men in the forefront in the carnation world, such as Messrs. Fred Dorner, E. G. Hill, Peter Fisher, Richard Witterstætter, W. R. Shelmire, Henry Weber and John H. Sievers, in the United States, and of John H. Dunlop, in Canada. Four colored plates and one hundred individual illustrations, most of the latter explanatory of the context, add to the value of the book.

The author, after dealing briefly with the origin and early history of the carnation, passes to an interesting account of the development of the flower by American growers, commencing with the introduction of the plant into the United States in 1852, by Charles Marc, of Bloomingdale, N. Y., giving in detail the achievements of Messrs. Dailledouze, Zeller, Heintz, Thorpe, Wm. Swayne, Sewall Fisher, W. P. Simmons, Starr, McGowan, Chitty, Tailby and others of the early experimenters down to the labors of our modern carnationists.

To show the magnitude of the carnation industry in America at present, Mr. Ward estimates that "from seven to eight million plants are annually grown, producing upward of one hundred million blooms per annum, cut and sold in the various markets of the United States and Canada. These flowers are estimated as selling at an average of four dollars per hundred, or four millions of dollars for the entire annual output. About the year 1890 the retail prices of carnations ranged from twenty-five to fifty and at occasional times seventy-five cents per dozen. At the present time the average retail prices in the larger cities of the United Sates stand at from seventy-five cents to five dollars per dozen, and, in rare instances, especially fine blooms are sold as high as eight to twelve dollars per dozen." This is a record that no other commercial floricultural staple can show in the short period of a decade, and testifies to the wonderful improvement of the flower, and its popularity with the purchasing public.

General cultural work is then exhaustively dealt with. Particularly valuable are the chapters on manures and fertilizers, on the construction of houses and benches, especially the text treating on sub-irrigation benches, with which latter the author has probably had a more extended and varied experience than any other carnation grower anywhere.

In the preparation of the chapter on Greenhouse Heating the author has had the assistance of a skilled, practical engineer, with the result that the subject is handled in a most masterful manner.

If Mr. Ward has excelled in any one branch of carnation culture, it has been in the raising of new varieties, several of the best commercial sorts of the present day being of his production. It is natural, then, that his methods relative to the breeding of new carnations should be of superlative interest and value—which they undoubtedly are—to every one engaged in that, the most fascinating pursuit connected with the carnation cult.

As is well known, there is no generally accepted classification of our carnations. That adopted by the author has certainly convenience as one of its merits. For breeding purposes he has divided his stock into the following eleven classifications:

1. Fancies: These embrace varieties with white, yellow, or other self-colored grounds, which are strikingly and peculiarly marked.
2. The Purple and Blue Section: This covers all shades of purple, mauve, and such as might be liable to produce a blue-colored carnation.
3. Crimson or Maroon: Most of the so-called crimson carnations are really deep scarlet grounds, which are covered with a veiling or sheen of maroon.
4. Scarlet Section: Needs no description.

The pink are divided into two sections:

5. Light Pinks: Embracing shades of the flesh, or salmon, commonly known as the Daybreak type, and
6. Dark Pinks: Exemplified by William Scott, and such dark varieties as Mrs. Thomas W. Lawson, Mrs. Theodore Roosevelt, and others.
7. Whites, requiring no description.
8. Yellow, variegated: These are yellow grounds which are striped, spotted, or bordered, with various colors such as scarlet, pink, etc.
9. White, variegated: White grounds, with various colored markings.
10. Pink, variegated: This is a section which is the result of seed sports derived from crimson crosses. The ground color of the flower is usually of a Daybreak shade of pink, and the variegations are almost always maroon or crimson.
11. A Fancy Section, which might be called "Flake," of which class Prosperity is a good example.

Mr. Ward takes the stand that no single form of carnation can be judged as perfect or ideal; but that many variations in type may be sucessfully grown and will please a wider range of people than if one formal type be produced. This, however, does not prevent the fixing of a scale of virtues which all good carnations should possess. These necessary attributes might be stated, he says, as color, fragrance, substance, form, habit and general appearance when the blooms are massed. Fragrance he considers one of the cardinal virtues of the carnation, "for throughout its entire history its fragrance has been noted as one of its chief attractions. A carnation without fragrance always seems to me like the comb without the honey." With which homely simile many interested in the continued popularity of the flower will agree. The author also believes that too much prominence has been given to the size of carnation flowers, and that "in the end we may commit the error of producing coarse blooms, deficient in fragrance and grace, and thereby impair the popularity of our carnations. Flowers two to two-and-a-half inches in diameter are large enough for ordinary carnations, and two-and-a-half to three-and-a-half-inch blooms. with an occasional 'Jumbo,' four inches across, should satisfy the craving for large size."

This is a point on which there may be difference of opinion. The large, symmetrical flower has certainly the preference at the present time; and size forms no barrier to public predilection, just yet.

The author is of opinion that carnation growing is a profitable business, if properly conducted, yet there is no calling that requires closer attention, or more constant personal application than that of the commercial florist. He furnishes some sterling advice on the necessity of tidy, well-kept establishments. A Monthly Calendar of Operations is an important feature of the book. The American Carnation Society and its useful work are dealt with in detail, and a list of American carnations, compiled by that Society up to 1899, is provided. This list, brought down to date, would have given it an added value.

Not the least interesting part of the volume are the biographical sketches of the men who have been instrumental in raising the Divine Flower to its present degree of perfection and popularity. Mr. Ward fittingly dedicates the book to "That body of enthusiasts, my fellow-members of the American Carnation Society, whose love of and devotion to the Divine Flower have enabled them to accomplish so much in so short a period of time."

A very complete index is furnished.

While exception may be taken by the hypercritical to the omission from the work of matter pertaining to the botany of the carnation, still, in view of the intent and purpose of the volume—that of a practical, working hand-book for the carnation grower—the omission is not a s rious one.

"The American Carnation" will take its place as the standard work of its class in America, and it is likely to hold that position for some time to come.

Obituary

Henry Bird.

Henry Bird, whose death was announced last week, was widely know as a horticulturist in business, an evolutionist in thought and a contributo to the local newspapers.

Mr. Bird was born in Warwickshire England, sixty-five years ago. H came to this country in 1860, lived a short time in Philadelphia, and then went to Newark and started the floris business, which he had learned in hi native land. He conducted a place in Newark and a larger one in Kearn township until five years ago, when h retired from business.

Mr. Bird was a well-read man. H was an admirer of Colonel Ingersol and his doctrines, and he was extremely liberal in his ideas of religion an other matters. He was president o the Newark Liberal League, made addresses at its meetings and delivere lectures in many cities.

Mr. Bird was married twice. A widow and three daughters, the youngest of whom is six years old, surviv him.

MAGAZINES RECEIVED.

FLORA AND SYLVA, a Monthl Review for Lovers of Landscape Woodland, Tree or Flower. New an Rare Plants, Trees and Shrubs, Fruit and Vegetables. The Garden Beautifu Home Woods and Home Landscape Edited by W. Robinson, author o "The English Flower Garden." Editorial offices, 63 Lincoln's Inn Fields London, W. C. Price, 2s. 6d. net.

Such is the title and scope of Mr Robinson's new magazine, a copy o No. 1 of which has just been received Among the interesting articles furnished in this number is one on "Tre Notes from Rochester," by George H Ellwanger, of that city; and one o "Evergreen Trees of the Easter States," by Arthur Herrington, o Madison, N. J.; "A Revision of th Genus Calochortus," by Carl Purdy, c California. Colored plates will be feature of the magazine; those presented in the current issue being Magnoli rustica fl. rubra; Calochortus clavatu and C. nitidus. The typography is excellent and the literature provide high class. Under Mr. Robinson's direction the success of Flora and Sylv can be safely predicted.

FIRMS WHO ARE BUILDING.

PEORIA, ILL.—Cole Bros. will remode their greenhouses.

DOYLESTOWN, PA.—Clemens & Collins are rebuilding two of the greenhouse on South Main street, and putting other in first-class condition.

READING.—G. Palmer is building new greenhouses on his premises.

BATTLE CREEK, MICH.—Henry M Burt is erecting another greenhouse.

BATH, ME.—The Kennebec Nursery Company is adding a greenhouse 150 x 2 feet.

CORNING, N. Y.—A. H. Woeppel has purchased a plot of three and one-half acres, and will erect greenhouses thereon

DE SOTO, MO.—A. Hibbert is enlarging his greenhouse on the corner of Third and Fletcher streets. The firm name will be changed to Hibbert Floral Company, S. H. Hibbert, president, and A. Hibbert, secretary. Messrs. Hibbert will construct two thousand square feet of glass and have a strictly modern and up-to-date floral establishment.

DIGHTON, MASS.—Ellery Briggs is making an addition to his plant.

SUPERIOR, WIS.—Miss O'Sullivan will erect a new greenhouse at Billings Park in the place of the one destroyed by fire.

The United States Department of Agriculture has fourteen bureaus and divisions, employs 4,000 persons, and has an appropriation for the coming year of $5,000,000. All this is the outgrowth of the first attempt in 1832 by the national Government to help the farmer when $1,000 was appropriated.

Sweet pea fields in Canada were kept comparatively free from lice by spraying with a solution prepared by soakink ten pounds of tobacco leaves and dissolving two pounds of whale oil soap in one barrel of water.

WHAT OUR ADVERTISERS SAY

Under this heading The Florists' Exchange will publish every week voluntary statements, each limited o fifty words, from its advertisers, alling attention to the main items offered weekly in their advertisements. The object is to assist our patrons.

The largest as well as the smallest advertiser is entitled to contribute.

Communications of this character must reach us *not later* than Wednesday morning.

The experiment is tentative, and we shall be guided by developments regarding its continuance.

Prices are not to be quoted.

On no account will matter of this kind be written up in this office.

Each advertiser must assume responsibility for the statements he makes.

L. H. Foster, Dorchester, Mass., says: Boston ferns are in demand this Spring. have 20,000 growing; 100,000 small lants for June-July delivery. The Anna Foster is proving all I have claimed for t; 20,000 are now ready."

F. R. Pierson Company, Tarrytown, N. Y., call attention to their offering of the gold medal fern Nephrolepis Piersoni. The demand for this fern grows heavier every day. Now is the time to invest in stock and get the benefit of the wave of popularity.

Richard Vincent, Jr., & Son, White Marsh, Md., say: "We call attention to our offer of hardy chrysanthemums. This class of chrysanthemums is growing n popularity every year; the demand for he plants at present is very brisk. We re also the largest growers of vegetable plants in the country."

Byer Bros., Chambersburg, Pa., say hat their stock of the following is worthy of special mention: Umbrella plants, hort, stocky and fine value; cobæa, extra trong 3-inch stock; Salvia splendens, heavy 2-inch, will make big stock in hort time; Stevia serrata, in large quanities; smilax, fine for handling at once.

James L. Reynolds, fertilizer manufacurer, Mt. Vernon, N. Y., says: "To obain actual and positive results it is unquestionably necessary to use a manure hat has pure bone meal as its body, which is the most imperative ingredient n the composition. I manufacture pure fertilizer solely. Its prominence grows daily."

CHANGES IN BUSINESS.

BLOOMINGTON, ILL.—V. W. Fredrick has gone into the florists' business here.

MALDEN, MASS.—Edwin F. Kelly has sold out his business to Cooney & Burgess.

ANSONIA, CONN.—Joseph Willis has built greenhouses here, and will grow violets and force vegetables.

WESTBORO, MASS.—R. H. Caverly has leased the greenhouse at the corner of East Main and Lyman streets.

SANTA FE, N. M.—Articles of incorporation have been filed for the Raton Greenhouse and Nursery Company. The company is authorized to carry on a general greenhouse and nursery business. t is capitalized at $50,000, to be divided nto 500 shares of the value of $100 each. The term of existence is to be 50 years, and the affairs of the company for the first three months will be in the hands of the following board of directors, who are the incorporators: Charles Sandusky, James S. Bowdry, Thomas D. Leib. The company's place of business will be at Raton.

New York.

News Notes.

The meeting of the New York Florists' Club will be held Monday evening, May 11, in the rooms in the Grand Opera House Building, corner of Twenty-third street and Eighth avenue. Spring flowers, novelties and hardy plants are in order for exhibition t this meeting. Secretary John Young, 1 West Twenty-eighth street, will be glad to receive any exhibits, and will see that they are properly staged and aken care of.

The outing committee will hold a meeting immediately previous to the club's regular session, to perfect arangements for the printing and pubishing of the catalogue of sports to ake place at the outing on July 1.

Siebrecht & Sons, Fifth avenue, have leased for a term of 21 years the proprty at the northeast corner of Fifth avenue and Thirty-eighth street. The building was the residence of the late Austin Corbin, with frontages of 60 feet on Fifth avenue, and 125 feet on Thirty-eighth street. Extensive alterations will be made. The annual rental is $36,000.

The New York Market Florists' Association have got their tent erected on the site of the old Clinton Market, and are now sheltered from the weather. The idea to have a tent was certainly a good one, as a canvas shelter is a great deal better than no shelter at all, especially when one is doing business at 3 o'clock in the morning, as these busy men do.

J. H. Small & Sons have been showing in their Broadway store this week some well-grown plants of Cineraria stellata and some long vines of Stephanotis floribunda, covered with their lovely flowers. Business has been extremely brisk with this firm since Easter. A very elaborate decoration was done by them this week for a luncheon in the Waldorf-Astoria, given by Mrs. Howard Gould. The daily press of the city ventured the assertion that the decorations were ahead of any that had previously been seen in that hostelry. The ceiling and walls were hung with apple blossoms; lilac was the table flower, and for the ladies, corsage bouquets of moss roses were used.

On the Fifth avenue side of the Waldorf-Astoria Hotel two very fine specimens of Araucaria imbricata are to be seen. Seldom in this vicinity have such fine plants of this well-known monkey puzzle tree been observed. The trees are in large tubs, and have evidently been lately imported from the other side of the Atlantic Ocean.

The Rosary Flower Company, J. H. Troy, manager, is moving this week from 388 Fifth avenue to Thirty-fourth street. The new store is located between Fifth and Madison avenues, and when the furnishing is completed, it will be one of the model stores of the city. A spacious conservatory has been erected on the roof. This was built by Thos. W. Weathered's Sons, and will be a valuable addition to the flower store.

The fourth annual meeting of the Horticultural Society of New York will occur on Wednesday, May 13, at 4.25 p.m. The meeting will be held in the lecture hall of the Museum Building, New York Botanical Garden, Bronx Park. The business meeting of the society will be followed by an illustrated address on the flowers, fields and woods of Japan, by Mr. John K. M. L. Farquhar. The annual exhibition of the society will also occur on the same date in the large hall of the Museum Building. Various prizes are offered for collections of horticultural products; also the $50.00 prize for the best horticultural novelty, in plant, fruit, flower or vegetable.

H. C. Steinhoff, grower, West Hoboken, N. J., is in Bermuda inspecting the lily fields.

Mrs. Keenan, mother of M. Keenan, retail florist, 410 Myrtle avenue, Brooklyn, died at his home on Thursday, April 30, and was interred on the Monday following in Holy Cross Cemetery.

Robert, the 19-year-old son of A. Laub, florist, Hughsonville, N. Y., died on Wednesday morning. He had been sick with typhoid fever.

B. Suzuki and Charles Lechner sailed for Europe last week.

Reports from Japan indicate that the growing conditions are not very favorable for the longiflorum lilies.

Joseph Fleischman, the Broadway florist, has been one of the jurymen on the celebrated "barrel" murder case.

Cleary & Co. have discontinued their business as horticultural auctioneers at 60 Vesey street, and J. P. Cleary has opened a temporary office at 136 Liberty street.

Scale on Currant and Raspberry Bushes.

(109) Spray the bushes with Bordeaux Mixture. The mixture can be made by taking two pounds of copper sulphate and one and one-half pounds of lime, dissolving them in 32 gallons of water.

Scale on Spruce Trees.

(110) We have a great many spruce trees, and they are all sick from the affection of the spruce scale. We are spraying the sick trees with a solution of whale-oil soap, which Professor Atkinson, of the Cornell University, recommends in his book. He says to take two pounds of soap and one gallon of water, and spray the trees; but I have found that it is impossible to spray with such a strong and thick solution, because you can't force it through any pump. I take now 10 pounds of soap to 50 gallons of water, and I spray each tree so well that I am sure there is no branch which is not soaked with the solution of the whale-oil soap. I have noted that the trees which I sprayed about two weeks ago are again attacked by the spruce scale. These trees are 10 feet high, and they were all sprayed thoroughly. Last year we sprayed them with kerosene emulsion, but that did not help any. Can anything more be tried than we have tried?

What is the trouble with the picea enclosed? Quite a few on the place are like the sample sent. L. K.

—Either kerosene emulsion or whale-oil soap is supposed to kill scale insects. At certain stages of life several of these insects cannot be reached, being under the shell or scale, and it may be that this has been the case when you have sprayed. In early Summer the insects are usually active, and the spraying should reach them then. If you make your spraying continuous throughout the season you must surely catch them. One pound of whale-oil soap to five gallons of water is considered a good mixture.

The white pine sprig which you send has on it what is called white pine bug. It has much the appearance of the mealy bug of greenhouses. Whale-oil soap should fix it. J. M.

A Complete Fertilizer.

(111) Is good bone-meal as good a complete fertilizer as those generally advertised? In what proportion should I use it? How many pounds to the square yard should be applied for crops like chrysanthemums, carnations, mignonette, etc., in solid beds, and on raised (5 inches of soil) benches; also, in the open ground? My soil is rather light and porous, caused by using mostly horse manure.

OLD SUBSCRIBER.

—While a mixture of bone-meal and wood ashes will make a complete fertilizer, there is one serious objection to the mixture, and that is this—that the ashes would be likely to set free more or less nitrogen from the bone, especially causing loss of nitrogen if the mixture were not mixed with the soil soon after putting the bone-meal and wood ashes together. If the ashes cost $10.00 or more per ton, the potash can be furnished more cheaply in the form of muriate. If they were mixed for the purposes mentioned, I would suggest about equal parts, but in that case it would be desirable to use in addition some nitrate of soda. Of a mixture containing equal parts of bone-meal and wood ashes it would be well to use at the rate of 1,000 pounds to the acre for the purpose mentioned, and in addition to apply some nitrate of soda at the rate of 100 pounds to the acre.

[PROF.] L. L. VAN SLYKE,
Chemist.
N. Y. Experiment Station.

Forcing Daffodil Bulbs a Second Year.

(112) Subscriber.—The bulbs are no good for forcing purposes for next year, and it would be simply wasted effort to try and save them. If one has a garden, however, and wished to plant out the bulbs direct from the flats, a good percentage of them would eventually become established and would flower outdoors in the Spring of next year.

BRIEFS FOR BUSY FLORISTS.

RUBBER PLANTS.—It is not safe to plant the young stock outdoors before the first of June; but in the meantime the plants should not be allowed to become too much root bound in the small pots. Rather than have that occur, they should be given a shift into larger-sized pots at this time. While it is a fact that there was a large supply of rubbers on the market last Fall, it was only the poorer grown stock that was really difficult to dispose of. Growers who had good, well-branched plants were able to clear out all that they grew, without much effort. If one is receiving newly imported rooted cuttings at this time, a good way to handle them is to pot them up at once into three-inch pots, then plunge the pots in the sand on a propagating bench, keep them well shaded until the roots have begun to move, and remove the shading gradually, being careful that too much water is not afforded until the plants have started to grow.

NEW CARNATIONS.—If the new varieties that are to be grown should arrive at this time, or later, don't try to save labor by planting them direct into the field unless they have extraordinary strong roots, and have traveled without receiving the least injury. In all cases it is safest to plant the newcomers into flats, and grow them for a week or two, either in a cool greenhouse, or in a cold frame. Then when they are finally planted in the field they will make much better headway than they would do if planted directly after being received.

DAHLIAS.—As soon as all danger from frost is over, the dahlias may be planted where they are expected to flower. For cutting purposes, the cactus section is very useful, and a few of these should be in every collection. In preparing the bed, a generous quantity of well-rotted manure should be worked into the soil. After the plants are set out they should not be allowed to wilt in dry weather. Water them whenever necessary, and cultivate the soil around them regularly.

HANGING BASKETS.—This is a good time to have a lot of hanging baskets filled and suspended from the rafters of a cool house, where they can be seen readily. By doing the work at this time small plants can be utilized, and they will be well established and growing by the time they are required.

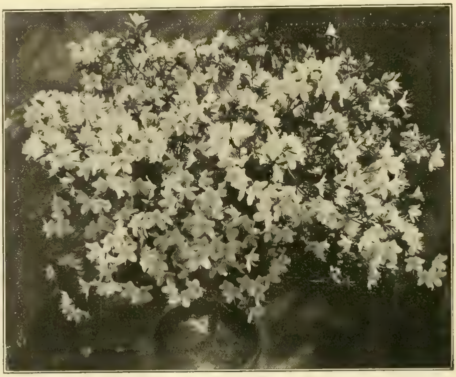
The man who plants his advertisement in a journal and keeps it there the year round, and every year, is the one who gets business and becomes known to the trade. Familiarity with an advertisement is akin to acquaintance with the advertiser. Class advertising.

Azalea Indica Alba.

To many old gardeners Azalea indica alba will appeal as being the first of all the genus they knew. It is one of the first of the introductions from China, its advent dating from the year 1808. To it we owe so many of the beautiful sorts now common in cultivation. Requiring no heat in Winter, being satisfied to be under cover only, even if in a building that freezes in severe weather, it is one of the easiest plants to winter over the gardener has to care for. Its growth is very slow when in pots or tubs, but this comes from the cramped condition of the roots. When planted out, growth is more rapid.

The slow growth referred to is also due to the plant's excessive flowering. The photograph gives an idea of the manner in which its flowers are produced yearly. It is no wonder but little growth is made. The demands of the flower exhaust it. The probabilities are that the plant illustrated has seen fifteen years of growth.

As it is recognized that the roots of a plant will spread naturally as far as the branches do, it will be seen how much too small the pot is for this plant. On the other hand, for conservatory purposes, very large plants are not the best, hence, so long as a plant keeps healthy and blooms well there is no call for a large pot.



AZALEA INDICA ALBA.

It is not well known that this azalea is hardy to a fair extent. There are some nice plants in the vicinity of Philadelphia, which have stood out many years. When in flower, as a hardy shrub, they are a wonderful sight.

Why may not other varieties prove as hardy? Every day gardeners are proving various plants hardy which have been thought not to be, and without doubt there are quite a number to be added to the list of sorts hardy in the North. JOSEPH MEEHAN.

Azaleas at Ghent Quinquennial Exhibition.

Among the best azaleas shown in the prize-winning exhibit of these plants, grown by F. Sander & Sons, St. Albans and Bruges, the Gardeners' Chronicle enumerates the subjoined varieties. The plants, it is stated, were models of what azaleas should be—flowers of large size, colors well chosen, both self-colored and parti-colored varieties being well represented.

The best whites were: Alba magnifica, Miss E. Jarrett, Kœnigin der Weissen, Anna Gunkel, Sacunthala and Madeline. Of crimsons: Obert von Kutzinsky, Apollo, Flambeau, General Postmeister, Stephan and Vesuvius. Of rose-colored varieties: Julius Roehrs, Memoria de L. van Houtte, Madame Van der Cruyssen, Liebig's Superba, Madame Louise Eeckhaute; lilacs: Temperance is the best. Of salmons: Mdlle. Marie Rosseel. Of parti-colored sorts: Paul Weber, Vervæneana, Madame Raphael de Smit, Mdlle. Emma Eeckhaute, Unica, Madame Joseph Vervæne, Madame Romaine de Smet, and Professor Walters the latter being the most distinct and best of this section, the flowers o large size, and in color salmon, rose and pink.

For a collection of twelve new varieties Sander & Sons were also awarded the first prize for a set of most promising and distinct seedlings. The bes of these were: Julius Roehrs, deep carmine, fine form; Frau Heinrich Seidel an extra fine white, tinted green a base; Triomphe de Bruges, rose-pink fine form; Lovely, extra large white Princesse Elisabeth, large white, extr fine form, green blotch upper portion o flower; Mephistopheles, deep blood-red Belgica, deep red, with dark blotch and L'Ami Steinmetz, a large flowe white ground, with carnation stripes.

Forcing by Ether in France.

With the discovery of Professor Johannsen, and the theoretic experiment of the effects of ether upon vegetatio which have been made in other countries, we have described the analogou experiments made in France, as we as an attempt made in Germany, to pu ether-forcing into practice on a larg scale. M. Aymard, of Montpellier, ha especially devoted himself to comparative experiments with different anæsthetics. He now gives us the result of a trial of this new method o forcing, which, we have no doubt, destined within a short time to revolutionize this industry.

Last Winter we made experimen with ether, chloroform, and other anæsthetics upon lilacs and lilies. The experiments having shown the advantage to horticulturists of etherizi plants before forcing them, we resolv immediately to put the new proce into practice. In order to guard again the escape of the ether, etc., we endeavored to obtain a place hermetical sealed, and for this purpose we ha a wooden building made in the form a rectangular cube, one square met in area and two meters high. Th structure was covered with plates well-soldered zinc; the base alone w left free. On the sides four handl were arranged, to which four cor were fixed, so that it could be suspended from a hook. This hook was fastened to a cord passing through t groove of a pulley which permitted t frame to be pulled up easily. The pulley was fixed to a framework. Th height of the "uprights" for forci lilacs should be such that when t hook touches the pulley the base of t structure should be about 1.50 met from the ground. When the plants a to be placed in it is raised by mea of the cord; the plants to be etheriz are placed underneath and the structure is gently lowered. In order to obtain the hermetic closure we adopte the following simple method:

At the beginning of the work w banked up against the lower part the sides some strong moist earth, carefully applying it to the zinc. Whe we raised the structure none of moved, and when we lowered it w took care to insert it in this pad, th forming a kind of frame. A little wat sprinkled from a water-pot rende the earth sticky, and with a trowel other tool the soil can be again presse against the zinc. With this simp method we have experienced absolutel no escape of the ether.

In order to introduce the ether w formed an opening at the top of t cube with a receiver below it. Th ether is introduced by means of a funnel, and the opening hermeticall sealed. The number of tree lilacs th will contain is from ten to twelv Among these a number of lilacs i smaller pots can be placed. This arrangement has also this advantag that it can be erected in the open ai and is easy of management. As the ne cost is not very much in large forcin establishments, several could be constructed which, considering the different duration of time required for etherization by the various lilacs and othe plants, would be very convenient. Th apparatus described above has been i operation at our establishment for t past two months, and has given t best results.

J. AYMARD fils, in Le Jardin.

ROSES.

The young stock should from now on eceive careful attention, as upon this e next season's work depends. Plants 2½-inch pots should, as soon as well ooted, be shifted into 4 or 3½-inch ots, never allowing the plants to get ot-bound. Those already in the larger ze should be kept free from weeds, nd if the plants are large and bushy, ey should be stood a few inches apart allow a free circulation of air and keep them from dropping their aves.

A piece of iron hoop cut on a bevel, fit the pot, and filed so as to better ut the weeds, makes a very good leaner; while a bright boy will go ver quite a batch in one day, in this ay killing the weeds and also removing the green scum which prevents the r getting to the roots. Stirring the urface of the pot may seem a mere rifle, nevertheless it is very important, s an experiment will soon demonstrate.

It is, of course, almost unnecessary to ay at this time that the potted plants hould never suffer for lack of water, being often necessary to look over hem two or three times a day. Red pider and greenfly are very troublesome, as they get on the leaves close the pots, and nothing but thorough yringing will remove these pests.

The grafted stock should be looked ver occasionally to see that the tie s secure, and if cutting into the plant should be loosened and retied. A rower not accustomed to handling hese plants is liable to lose quite a umber of them sometimes by overooking this detail.

The old plants, if they are to produce good blooms, should receive liquid t least twice a week; the surface of he soil should be stirred a little to keep it from getting baked. The plants re now making a very rapid growth, nd it will pay to go around twice a week at least to disbud and tie up the oung shoots, if straight stems are desired. Although inferior stock is very plentiful, good flowers are always salable.

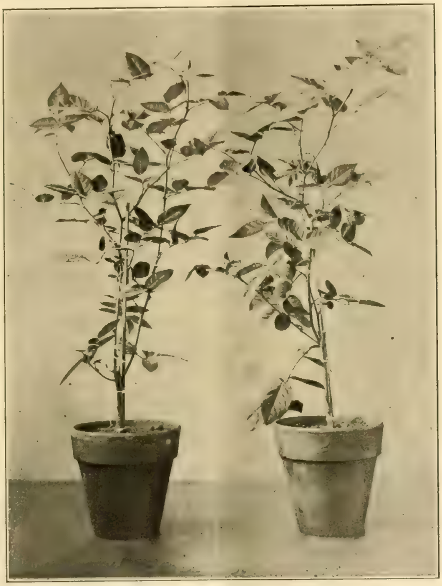
Air should be given very freely to harden the plants, avoiding, however, all sudden changes and cold draughts. Syringe often and thoroughly, or red pider will soon play havoc. If a little ime is sprayed on the glass during this hot weather the sun will be less liable o injure the buds and the houses will also be much cooler.

It is still too early to let the fires go out, for we may have some very cool nights this month. The better plan is o leave on an inch or two of air and use a little fire to keep the air in the houses from becoming stagnant.

PENN.

Grafted Roses.

Our illustration shows two grafted rose plants, nine weeks old, grown by Edward J. Taylor, of Southport, Conn. Mr. Taylor says: "Our Manetti stock was received in an apparently good condition, but fully 50 per cent. failed to start at all after having been potted. The stock was very carefully handled after being potted, being placed in a cool house and given the very best of treatment. We had good success in our grafting bench, taking out fully 95 per cent. of all stocks grafted. Since taken from the bench the stock has made fine growth, being clean and healthy and entirely free from mildew. The first plants grafted are of good size, and will be ready for planting in about two weeks, when we will begin to replant the first of our rose houses. It would be a great help to us if we could succeed in getting good, strong Manetti stock.



GRAFTED ROSES NINE WEEKS OLD.

Grown by Edward J. Taylor, Southport, Conn.

Shrubs for Shady Places.

This subject is discussed in Bulletin No. 21 of the New England Association of Park Superintendents. Edward P. Adams says: "There are a good many shrubs like the lilacs and spiræas that, if set out when the shade trees are, will become so well established before the shade become dense that they will flourish in spite of the shade. Stephanandra flexuosa I have found to grow well when set out under the dense shade of maple trees, but it is too low growing for a screen; while retinosporas and some other evergreens grow well under American elms. But under low growing shade trees I have not been successful in establishing a leafy screen, although it has been much needed in some places."

J. F. Huss contributes the following: "I find that under branched trees many good varieties of deciduous shrubs may be used, which are as follows, well adapted, and which I have used with splendid results: Ligustrum ovalifolium, Ibota, Forsythia viridissima, Andromeda Mariana, Myrica cerifera, Rhododendron maximum, Lonicera fragrantissima, Viburnum tomentosum, Lantana, Cornus sanguinea, etc., Ilex verticillata, Kalmia latifolia.

"For low growing shade trees I would recommend as follows: Azalea nudiflora, Callicarpa purpurea, Comptonia asplenifolia, Lonicera Halleana, brachypoda, Symphoricarpus vulgaris, Berberis, Thunbergii, Ceanothus americanus, Euonymus radicans (evergreen), Rhus aromatica, Zanthorrhiza apiifolia, Taxus adpressa, baccata and canadensis and Vinca minor."

Theodore Wirth adds his testimony, as under:

"The list of shrubs given by Mr. Huss for shady positions, for screening purposes, is a good one and gives enough variety to make a most effective planting. To establish a good planting under grown-up shade trees is indeed no easy undertaking, and even such shrubs as are by nature and habit adapted for shady locations will only then grow, and form successfully a desired screen, when they are properly assisted in getting a foothold in the ground, which is already taken up to a great extent by the roots of the existing trees.

"It is not always the shade that stunts the growth of such plantings, but much oftener the lack of nutrition and moisture, both of which are naturally absorbed by the well developed and established system of fibrous roots of the trees. Mr. Adams' observation that a large variety of shrubs planted at the same time as the trees will later on flourish in the shade of the latter must at once suggest the proper course to be followed to help to make such plantings successful. To dig in amongst the root system of the trees holes large enough to gather in the roots of the shrubs is not enough to insure the growth of the plants.

"In a good many places, especially on lawns and in groves where in the Fall the leaves are carefuly removed, it will be found that the roots of the trees are very near the surface and often even above ground; on such places a filling of good loam to a depth of six or more inches will help the trees and at once facilitate the building up of good strong shrubbery. The shrubs will develop a good system of roots and have something to stand and live on. On other places where such filling seems inadvisable, it will again help the trees to remove the top soil under the trees about 4 to 6 inches deep, even if a few of the roots have to be removed, and to fill in with new rich loam. The shrubs will quickly take hold and after once established keep on growing, especially if they are taken care of during the first year or two, during dry weather. One more good move to help them along would be to cut out some branches of the trees, where the shade is unnecessarily dense. This will admit more water during rain, and give more light. Cultivating of the soil during the Summer will also help along, but it is not advisable amongst rhododendrons and kindred plants that form fibrous roots near the surface and are surface feeders.

"I think that by proper attention and liberal treatment the list of shrubs adapted for plantings in the shade can be considerably enlarged, while by neglect, maltreatment and an insufficient supply of life-sustaining soil all plant life will be made next to impossible."

Charles E. Keith supplements the list of Mr. Huss with the following: Laurus Benzoin (spice bush), Azalea viscosa, clethora, Spiræa tomentosa, Viburnum lentoga, cydonia, sambucus and the amelanchiers, adding, "I have seen groups of young ailantus and Robinia hispida in a partial shade that were exceedingly pretty."

J. A. Pettigrew adds: "If the shade is very dense, Mr. Adams is up against trouble sure! However, under a reasonable amount of shade I have found common barberry (Berberis vulgaris), buckthorn (Rhamnus catharticus), common privet (Ligustrum vulgare) and many of those enumerated by Mr. Wirth and Mr. Huss do well; but much depends on the preparation of the ground, a fact that Mr. Wirth fails not to impress upon us. Heavy mulchings, too, will help to keep the plantations under headway."

Secretary Duncan augments the lists enumerated above with the following: Hamamelis virginiana, Viburnum acerifolium, Azalea calendulacea and Azalea amœna, Andromeda ligustrina and floribunda, and the beautiful Leucothœ Catesbæi.

Applied Scripture.

A lover of roses was looking over his bed of rose bushes not long ago and discovered that a hitherto flourishing Paul Neyron was inclined to debility. Suspecting that something was wrong he dug it up to examine the roots. He found that the worms had eaten a hole through the main root just below the ground and that there was so much dead wood just above the ground that there was but small avenue for the sap to find its way into what should be the growing wood. The lower portion of the root, however, was decidedly lively and was pushing itself with much vigor. In order to persuade the sap from the root to move along toward the bud and blossom, the root was pruned, carefully scraped and cleaned about the diseased parts and put back into the ground where it was given its chance.

Now the lover of roses is blessed with a wife who carries great chunks of Bible in her head and she remarked as the plant was re-set, "That'll grow all right. You know in the book of Job it says, 'For there is hope of a tree, if it be cut down, that it will sprout again, and that the tender branch thereof will not cease. Though the root thereof wax old in the earth, and the stock thereof die in the ground, yet through the scent of water it will bud and bring forth boughs like a plant.'" The rose lover is now emulating the patience of Job, and notes that the Paul Neyron is doing well.—Hartford (Conn.) Courant.

Duration and Care of Coil Boilers

Editor Florists' Exchange:

As there seems to be considerable inquiry of late about the use of coil boilers, which we introduced, with the pressure system, several years ago, we wish to impress upon our brother florists the importance of having their boilers emptied during the Summer season. There is, at that time, more or less condensation on the boiler tubes, and cast iron boilers, when kept full of water, will cause them to rust and deteriorate faster than use in firing.

The average duration of single-thick pipe (1½ inches) is about eight years, which is about three years longer than that of the thin tubes of steam boilers.

We are using now double-thick steam pipe, which will last about fourteen years, besides increasing the heating power about 40 per cent. over that of cast iron boilers, providing that pressure is used, as a well-constructed coil boiler will not work well without it, generating heat too fast.

If an even grade of 2-inch cast iron tubing could be secured, with good threads, you could make a cast iron coil. The double-thick wrought iron pipe, however, answers the purpose well enough, and is more reliable.

DENYS ZIRNGIEBEL.

Needham, Mass.

Canadian News

Montreal.

News Notes.

P. McKenna & Son will shortly enter the retail ranks, and will open a fine new store, corner Guy and St. Catherine streets. It is said this will be the handsomest florist store in the city. They will also increase their glass area at Cote des Neiges this Summer.

L. H. Goulet will remove from his present location on St. Catherine street to the opposite side, further east. Mr. Friedman will occupy Mr. Goulet's old stand, continuing the flower business.

B. Graves will move farther west on St. Catherine street, nearer Guy street.

The growers are certainly now the busiest people in the trade finishing up their potting of bedding stock. This work has been delayed somewhat, owing to Easter being so late this year. Outdoor work is being greatly retarded for want of rain; we have not had a good shower since before Easter. The demand for Spring plants is fairly brisk, and no doubt a good business will be done in these. The storemen report trade rather quiet, with cut flowers moving more slowly; qualities are, however, excellent.

Club Notes.

The regular monthly meeting was held Monday night; about thirty members were present. Mr. Gibb, of the City Gardens, read his promised paper on "Boston Parks," which interested us all very much.

William Matthews was elected a member of the club.

The club has for some time been making efforts to secure a grant from the Provincial Government without success, but C. A. Smith has now the matter in hand, and if he don't get the grant for the club, we may give up trying for it.

C. Craig, gardener to A. Joyce, Esq., exhibited a fine specimen of Platycodon grandiflora (blue) in a 6-inch pot. Mr. Craig lifts these plants in the Fall, potting them immediately, and keeps them cool all Winter. This is a fine plant for the conservatory, and should be grown by private gardeners especially.

In answer to a question for name of best red geranium for bedding, those present agreed that A. Ricard and Enrich were the best.

A very interesting discussion took place as to the advisability of growers agreeing to sell at a uniform price—to be continued at next meeting.

W. C. H.

Hamilton.

News Jottings.

Trade seems to be brisk in all lines. The seedsmen are very busy this Spring. There is a complaint from the florists about the largely increased number of window boxes their customers are wanting filled; they claim that these things take up too much room in the houses and leave no profit. The only cure I see for it is to charge better prices. It certainly is very easy to fill up a bench with boxes and baskets. It seems only reasonable, though, that the privilege of having the boxes established for a week or two in the greenhouse should be paid for.

Arthur Lambert is back in the shipping department of Webster Brothers.

Club Meeting.

The regular meeting of the Gardeners and Florists' Club was held on the evening of May 5. The attendance was not large; it could hardly be expected at this time of the year. President Turner was unavoidably absent, and Vice-President Townsend took the chair.

Arthur Watson, lately from Keighley, England, was proposed and elected to membership. Robert Bailey, gardener, was also admitted as a member.

In response to a request from the club for an interchange of speakers, a communication from the Toronto Gardeners and Florists' Association was read offering to send up Thomas Manton and a good delegation of members on some date in July. The secretary was instructed to write that this would be acceptable, as it seems to fill exactly the aim of the local club. There is no doubt that a better acquaintance between the clubs will result in mutual good.

The subject for the evening was a discussion on a question taken from the box at a recent meeting. It read as follows "Can jobbing gardeners gain by using their opportunities for guiding and encouraging planting of plants, seeds, shrubs, etc., among those whose places they tend?" A short but interesting discussion took place and several different views were brought out.

C. Webster brought a number of sprays of early flowering shrubs and perennials, and made a few remarks on them.

BEAVER.

THE MARKET

MONTREAL.—Trade has been quite satisfactory since Easter. In cut flowers, carnations continue to be in great demand. Roses are in good supply, with sales active. Perennial plants for the garden are moving a little, and there will doubtless be a great demand for bedding stock.

TORONTO.—Business the past two weeks has been very brisk, with stock both good and plentiful. The retailers have had matters nearly all their own way. There has been a large quantity of design work, and the stay of Lord Minto in the city has made things very lively; the select of the city have been spending their money quite freely. The Canadian Horse Show last week also called for the use of large quantities of cut stock.

Carnations are getting much more plentiful, and are coming down to old-time prices. Roses are also very abundant. Outside tulips are to be had in almost any quantity, though they are not so good this year as the last few years; being shorter stemmed and duller colored. Violets are very scarce; but lily of the valley is still plentiful. The wild marsh marigold, Caltha palustris is offered and sells well. Its pretty golden flowers make a fine decorative effect. Forget-me-not is also offered in small quantities. Smilax and asparagus are scarce; adiantum is more plentiful. Small ferns have been scarce all Winter, but are becoming quite abundant now.

The demand for hardy plants this Spring is very good, and large numbers are selling. There is also a fine call for clematis, shrubs and rose trees; in fact, all lines of the profession are flourishing. This is a good job for many of us, for the coal bills the past Winter were extra heavy, and help is harder to get and higher priced than I have ever before seen it.

T. M.

TORONTO, ONT.—Roses, American Beauty, extra, $20.00 to $25.00; No. 1, $15.00 to $20.00; culls and ordinary, $5.00 to $8.00; Bride and Bridesmaid, fancy special, $15.00; No. 1, $6.00 to $10.00; No. 2, $1.00 to $6 00; Mme. Cusin, $1.00 to $8.00; Meteor, $1.00 to $10.00; Mrs. Pierpont Morgan, $1.00 to $10.00; Perle des Jardins, $1.00 to $8.00. Carnations, inferior grades, 75c. to $1.00; standard varieties, white, $1.00 to $3.00; red, $1.00 to $4.00; fancy, all colors, $4.00 to $6.00. Adiantum, 70c. to $1 00; asparagus, $20.00 to $75.00; callas, $4.00 to $8.00; daffodils, $1.50 to $2.00; daisies, 30c. to 40c.; galax, 15c.; lilies, $4 00 to $6.00; lily of the valley, $2.00 to $4.00; mignonette, $1.00 to $4.00; narcissus, $1.50 to $2.00; tulips, $1.00 to $3.00; violets, 50c. to $1.00.

T. M.

Washington, D. C.

Trade News.

Business among the retailers has been very good the past two weeks, also among the growers. The latter are doing most of their trade in bedding plants. I think that more of these will be sold this year than ever before, as everybody who has a front or backyard wants a bed of flowers.

A. Gude & Bro. are cutting about two hundred American Beauty roses a day; the flowers are very fine and range in price from $2.00 to $10.00 per dozen. Kaiserin Augusta Victoria are still very good, and bring from $1.00 to $3.00 per dozen.

The market is packed with cheap flowers, and also bedding plants.

Charles William Wolf has resigned his position with Shaffer and is in the landscape business under the firm name of Wolf & Ridenour. Mr. Ridenour was also with Shaffer. They are doing a successful business, and expect to open a first-class retail store the coming Fall.

C. W. W.

Philadelphia.

Club Notes.

The Florists' Club meeting on Tuesday last was well attended. The topic for discussion was, "How to Select a Winning Bowling Team for Milwaukee." This brought out a very strong discussion. The matter was finally left to a committee. While no plan has yet been decided upon, it is likely the same system as last year will be followed, viz., for the candidates to bowl a series of games on neutral alleys, the first seven men to be selected to represent the club. No matter the plan adopted, it will not suit all, so it is a difficult task for any committee.

A committee, consisting of the officers of the club and John Burton, president of the S. A. F., was appointed on transportation, so that convention matters have started in good shape. John Westcott gave as his opinion that the Milwaukee convention will be a very large one, and a pleasant one to go to, as there are so many routes available; and no doubt a reasonable fare can be obtained.

At the June meeting Walter H. Whetstone will address the club on "Wrought Iron Pipe and Valves."

Leo Neissen reports an increase of business at his new wholesale establishment at 1217 Arch street. He has every facility for convenience and quick handling of stock; and now while flowers are plentiful it is noticeable that he has a grand lot of first-grade stock on

Henry Simpson, foreman at the Edgely Greenhouses, was given a birthday surprise by several of his friends last week. An impromptu euchre game was organized, and the first prize, of a handsome bunch of Edgely's famous roses, was won by Mrs. Anna J. Hay. Refreshments were served in princely hospitality by the hosts. The guests were each presented with a bouquet of roses. In honor of the occasion Mr. Simpson was given a picture of a lion for his den.

An "Owed" to Uncle Sam.

O Uncle Sam, I thankful am, you've not forgot my garden's needs. The mail to-day, without delay, has brought the annual dose of seeds. Yes, I will try the salsify, leek, endive, radish, squash; the watermelon and will tell, if they add to my cash. There's beans to put flesh on my bones; cukes long enough for razor hones; and beet seed mixed with gravel stones, and O, with undiluted joy, spinach I see, Bloomsdale Savoy. But where's the corn, the corn I need? The hybrid, big-eared, horse-tooth corn, I've always cracked for chicken feed? The oversight may seem but slight; it scarcely can be called a crime. But may I hope another time, that you will send in large supply, the feed for which my chickens cry?—Rural New Yorker.

Review of the Market

EW YORK.—Far too many flowers reaching this city every day these s for the demand. Since the begin- of May, business has been dull. it steamer trade there is does not unt to a great deal; and the old su- tition regarding the unluckiness of iy marriage seems to have a dampen- effect on the matrimonial market. florist trade has, therefore, to rely fly on funeral work for its present port. Of course, occasional dinners luncheons are occurring, but there so much demand for flowering nches of fruit trees at these affairs the general run of commercial cut ers play but a small part at these en- ainments.

oses of all kinds that are seasonable been a glut all week; and it cannot aid that there is a fixed price for any them. In hundred lots, selected, erican Beauty have been selling at 0. While a few teas have reached ., slips containing specials and ex- only have sold at $4.00 per 100. No. d No. 2, when sold together in slips, gone for $2.00 per 100.

rnations are, if anything, suffering than roses. White varieties do not n to be wanted, and can hardly be ed at any figure. Job lots of fancy other flowers have been disposed of gures reaching down almost to $1.00 100. Three cents each will purchase y carnations of the choice colors in ll quantities. This is quite a drop alue since a week ago, and the deal- handling carnations in quantity are to admit that this has been the t week that has been experienced season.

e demand for green material of all s has decreased, also. The price of ntum Croweanum has been reduced 1.25 per 100. Bulbous flowers from oors are coming in freely. Narcissus tulips are only worth 50c. and $1.00 100, respectively. Lily of the valley, frames, is arriving in quantity; and 'ancy prices for this stock are at an $1.00 per 100 being about the ruling e.

olets are still on the market in quan- but it is useless to quote rates on any longer this Spring. There is ably not more than one box in ten sells when the flowers are first re- d, and the only thing that can be with them is to unload them on the t peddlers, at 75c. and $1.00 per 1000 rdly enough to cover the expense of sportation from the grower to the r.

ttleyas are much too plentiful for the and, and prices have been ruling at and 15c. Home-grown lilac has be- very plentiful, and hundreds of hes are being disposed of at 5c. and bunch.

eet peas are not selling nearly so as they were, though the slump on flowers has not been so pronounced has been in the case of almost all kinds of stock.

ies are in moderate supply, with little change in the asking price; drop in the value of these occurred week.

ICAGO.—For the past week the sup- f stock has been on the increase, but et no glut has occurred. In roses augmentation is more noticeable in and Bridesmaid than in any of the kinds, although the supply of Amer- Beauty, especially the long-stemmed has been abundant. Prices on have dropped to $3.00 per dozen he best. A large stock of short- med flowers is coming in and selling cheap. Bride and Bridesmaid are d at from $3.00 to $8.00. Liberty to $25.00 per 100, but only a limited er is selling at the latter price. des Jardins, Golden Gate and Ivory from $3.00 to $7.00 per 100, while rin Augusta Victoria and La France e from $4.00 to $8.00 per 100.

supply of carnations has been on ncrease and prices are somewhat than at any time this season. good stock can now be obtained at $1.50 to $2.50 per 100; fancy stock exceeding $3.00 per 100.

lets are over in this market; very are to be seen now, and those ob- ble are not of good quality. A supply of the outdoor-grown Rus- violets are on hand; these bring 40c. 00. In some houses, violets from oods are on sale.

bulbous stock not so much is arriv- s a week ago; still the supply of is large yet. These sell at from to $8.00 per 100. A few late tulips n the market, bringing from $2.00 .00 per 100. Lily of the valley is better than a week ago, prices ng from $3.00 to $5.00 per 100. The of sweet peas is equal to the de- averaging 75c. to $1.50 per 100. agus realizes 35c. to 50c. per string; x, $15.00 per 100. Some early red peonies are around, and bring 75c. per dozen.

Business for the past week has been very good, both in retail and wholesale circles. Though the season has been backward, trade in plant lines has been better than was expected. Many growers are now throwing out their old stock and replanting both carnations and roses, and a number of the smaller growers have emptied their houses to make room for pot plants. Heavy frosts the past week cut off the supply of outgrown lilac.

R. J.

BOSTON. Business during the last two weeks among the city florists has been very quiet; even with the wholesalers, though there is a little something doing in the shipping line, and trade is reported as rather slow. Carnations and roses, which now form the bulk of the supply, are greatly in over-stock and very druggy, it being impossible to dispose of the daily receipts at even fair prices. American Beauty roses are in evidence everywhere; quantities of short and medium-stemmed flowers cut from plants in houses which have been run cold all Winter, are now coming in, and many of the short ones are cleaned out at $1.00 and $1.50 per 100. Medium-stemmed grades make $6.00 to $8.00, while No. 1 go to $12.50 and extras and specials at from $16.00 to $25.00. Many of the latter grade have to be sacrificed for considerably less. Bride, Bridesmaid, etc., bring from $1.00 to $8.00 per 100.

Good carnations are freely offered at $1.00 per 100, with the better grades of ordinary sorts at $1.50, and the finest at $2.00 per 100. Fancies reach $3.00 per 100 in rare cases; shorts and inferior stock sell at 50c. per 100.

Bulbous flowers from inside are about done, but a good crop of outdoor tulips is now coming in, which do pretty well at $2.00 per 100. Lily of the valley is plentiful at $2.00 and $3.00 per 100, with a good supply of frame-grown stock, which sells best.

Sweet peas at 50c. to 75c. per 100 sell well, and marguerites, pansies, cornflowers, and such, do pretty well in small bunches.

F. J. N.

ST. LOUIS.—Trade in the cut flower line the past week was rather dull, notwithstanding the thousands of visitors which were with us during the dedication of the World's Fair. Those who had banquet and reception orders to fill during the week were, of course, kept busy. The largest of those was furnished by the Michel Plant and Bulb Company in the Administration Building on the grounds, when the President and ex-President of the United States and many other distinguished guests were in attendance. The Ellison Floral Company furnished the decorations at the home of D. R. Francis. American Beauty roses were sent each day during the stay of our distinguished visitors. The Reissen Floral Company and Fred Foster furnished the downtown hotels with flowers and plants used to entertain the visitors during the three days of the dedication.

Thursday, business was entirely suspended, and all the retail, as well as the wholesale houses closed up to attend the ceremony at the World's Fair grounds.

The cold snap on Thursday last did a lot of damage to young stock and plants that were planted early.

At the wholesale houses stock is piled up; roses, carnations and lilies are most plentiful at present.

More American Beauty roses are in this market than ever before; extra fine first quality are selling as low as $2.00 per dozen and even cheaper in hundred lots, with long-stemmed stock so cheap that shorts have no call whatever. The street-corner merchants are handling these at 25c. per dozen; the other roses have to suffer from the over-production of Beauty. Only white sorts are having anything like a demand. A number of big weddings are on for this week and perhaps this will help the rose market somewhat. The prices on smaller roses can hardly be quoted at present; $1.50 to $3.00 per 100 is considered a big price; this figure is for "take them as they come;" first selected stock commands $5.00 and $6.00 per 100.

For carnations a good demand is still experienced; but so many thousands are coming in that plenty of them are dumped the next day to make room for the fresh stock; $8.00 and $10.00 in 1000 lots is all they bring; in small lots of 100, $1.50 and $2.00 is the figure. The quality is good in all varieties.

Speaking to some of the growers the other day in regard to the cheap prices, they say that they can stand these at present, as they have got big prices all the season.

The bulbous stock is nearly all cut out now. Callas and Harrisii lilies are a glut; it seems that no one wants them, as funeral work has been scarce of late; this week the price of lilies is $5.00 and $6.00 in 100 lots and cheaper when ordering 1000.

The quality of sweet peas is very good and they are about the only flowers that hold up in price—50c. for short and 75c. for good long flowers. The demand takes up about all the stock coming in. Sweet peas will become more plentiful as the season advances.

Smilax is still very scarce in this market, with a good demand. Some very good Asparagus plumosus is in, taking the place of smilax; it is sold at 35c. and 50c. per string.

ST. P.

PITTSBURG.—Trade conditions for the last few weeks have been very satisfactory; several good weddings and other important social functions creating a good demand for florists' work.

The bedding plant trade is starting slowly. A little warm spell would help a great deal; likewise in the seed trade such weather would have a good effect. The supply of cut flowers is up to all demands, excepting that occasionally carnations are a little short. These still hold up well in price, averaging about $3.00 to $4.00 per 100 for good stock. Roses are plentiful and prices range from $20.00 to $25.00 per 1000 for fair stock. American Beauty are quoted at from 5c. upward; good long-stemmed flowers bring about $20.00 per 100. Sweet peas are still coming in rather slow. Yellow daisies are fine. Violets are in fair demand. A little outdoor stock is to be had, but the severe frosts about a month ago killed much of it. There is no lilac in our vicinity, and that shipped from the South is hardly fresh enough for customers to find a ready sale.

E. C. R.

INDIANAPOLIS, IND.—May business is never extraordinarily brisk, and this condition prevails at present. There is some funeral work, some decorating, some planting, but there is a departure from the heavier business transacted during the past few months. With the decline in trade comes a corresponding decline in the quantity of stock. Roses are showing the effect of the weather, and are too numerous to be disposed of. Bridesmaid, Bride, Sunrise and Meteor sell at $1.00 to $1.50 per dozen, retail; 2c. to 6c., wholesale. American Beauty roses are moving very slowly, and bring from 3c. to 25c., wholesale; $2.00 to $6.00 per dozen, retail. Liberty is still holding its price of 15c. to 20c., wholesale, but this is probably due to the fact that few growers have any to offer, rather than the great demand for this rose.

Carnations are over-plentiful; No. 1 grades sell at 3c.; good grades, 2c. to 2½c.; small stock, 1½c. to 2c.; 60c. to 75c. per dozen is the retail price for them.

There are still some double violets around, but the demand for them is light. Quite a number of callas and Harrisii lilies are disposed of at $2.00 to $3.00 per dozen, retail; $1.00 to $1.50 per dozen, wholesale. Sweet peas are plentiful and there is a good demand for them at 35c. per bunch of 25. Outdoor lily of the valley and lilacs are to be had in abundance. The former sell at 25c. per dozen. Pansies, daisies and swainsona have sold exceptionally well lately; this is accounted for by a number of infants' funerals.

I. B.

GRAND RAPIDS, MICH.—The few bright days with which we have been blessed have brought out a heavy cut of carnations, but not any more than enough to meet the steady shipping demand. Roses are scarce, and will be, from appearances, for the rest of the season. A few lilies still continue. Violets are over. Plenty of outdoor bulb stock is in evidence. Carnations bring 40c., 50c. and 75c. per dozen; the 50c. rate is the regular price; roses, $1.00; lilies, $2.00; American Beauty, $1.50 to $5.00; bulbous stock, 50c. per dozen.

It looks as if there would be a heavy crop for Decoration Day; but if demand keeps up as at present, there will be, as at Easter, a shortage, though not so great.

G. F. C.

BUFFALO, N. Y.—The supply of flowers is ample in a general way for the but moderate demand. Carnations still run light. Souvenir du President Carnot roses are now in, with fine foliage, while in quality other kinds are not far behind, and fair prices incline to be realized. Outdoor bulbous blooms come in a bit over-plentiful on some days, and, this season, lacking size and brightness somewhat, owing to the prevailing dry and cool weather.

VIDI.

TOLEDO, OHIO.—The weather was very unfavorable; nevertheless Easter trade was very brisk; in fact, better than last year's. Azaleas, lilies, spiræas and Crimson Rambler roses were the best selling plants, the prices being about the same as those of last year. In cut flowers we had a great call for roses, violets, carnations and lily of the valley, at better prices than last Easter. There was nothing new.

MRS. E. SUDER.

Oreodoxa regia, the "Royal-Palm."

We desire to call the attention of the florists and gardeners of the country to our advertisement of plants on page 535 of this issue of the EXCHANGE.

The prices are BARGAINS and are made so simply because of an over-supply for our retail needs.

The extent of our stock is immense, being ybout TWO ACRES SOLID and is in excellent condition to ship. Let us hear from you if aou can possibly use ANYTHING on the list, and if you are not ready JUST NOW, we can reserve it for future delivery.

The list we offer is not all we have; we can furnish a great many more items at low rates and will be glad to send a catalogue of stock.

REASONER BROS.,

Royal-Palm Nurseries, Oneco, Florida.

SAVANNAH, GA.—Notwithstanding the large quantity of outdoor blooming roses and other flowers, the sale of florist's or indoor stock was all we could wish. I think no flowers were left over anywhere in the city. The supply of lilies and other flowering plants was not equal to the demand.

OG.

PROVIDENCE, R. I.—For the week of April 26, business assumed goodly proportions. Stock is plentiful, but is regularly absorbed at good prices. Good sweet peas find a ready sale at 50c. to $1.00 per 100. A few pansies in baskets are on the market, although it will be another week before the bedding plant season opens locally. The weather remains fine and cool, which enables the retailers to make some full window displays with lasting effect.

C. S. M.

ST. PAUL.—The Spring has been cold, wet and backward, the trees not being in full leaf yet. These conditions have had a depressing effect on trade, although sales have been fairly good. Still, business lacks vim and vigor, and will until warmer weather comes. Carnations are scarce. Roses are quite plentiful, with a large proportion of No. 2 blooms. Funeral work has kept quite a number of the craft busy. Bedding stock is backward, but a few days of warm, sunny weather will right everything and set everybody busy.

R. C. Seeger, in his store on Robert street, has a nice display of blooming plants at all times, and is building up a nice profitable business.

Swanson has a fine display of tulips and other bulbous stock.

L. L. May & Company are selling large quantities of seeds which have been extensively advertised in the local papers.

There has been an unusual demand this Spring for quick growing ornamental trees and in this class nothing surpasses the Carolina poplar. With its beautiful foliage, its fine, rapid, upright symmetrical growth and its hardiness, it is particularly adapted to the Northwest, where many of the beautiful ornamentals will not survive. The Winter was most favorable for all stock, while the cold wet Spring has given us a long selling season and a most favorable one for shipping.

VERITAS.

TOBACCO POWDER
THE BLACK STUFF FINE—For Sprinkling Only.

WHEN you cannot fumigate with our Fumigating Powder you can apply our Black Stuff Fine direct to the plants; it is strong and equally effective in doors or out for extermination of all plant pests. DREER'S ROSES

Selected Two-Year-Old

These Roses are field-grown plants which were potted up during December and January and stored in cold houses during the winter, making the best possible stock for selling to the retail trade.

The prices noted are for strong plants in 5 and 6 inch pots (according to the growth of the variety).

In ordering, state if substitutes may be furnished if certain varieties are sold out.

Houses for Carnations.

As a great many are building at this ason of the year, or are preparing to nstruct carnation houses, a few re- arks on houses and our experience ith the different styles of houses may e opportune.

Opinions differ widely as to what is e most suitable house for carnations, d this may perhaps be due to the fferent climates in which the plant is own. There would, of course, be a eat difference in the behavior of ock grown in the South and that of r carnations here in New England; d I cannot cover the construction of ouses for a warmer climate than our vn. Then, too, here in New England e find that very few of our growers ite in saying that a certain style of use is the most practical, and I ould hesitate to say that any style is ally the best. But we have grown rnations in a number of houses hich differ radically, and I wish to ve you the conclusions derived from is varied experience.

Several years ago we grew William ott in an even-span house, running st and west, which was the producer more flowers per plant than any we ve ever grown, and the quality of e bloom was uniformly good. This as a house with solid beds, and the il was very heavy; in fact, heavy ough for roses.

A three-quarter span house, with ooden benches planted some years o with the almost forgotten scarlet, mily Pierson, is a historic house, and t this structure did not maintain the ality of bloom as late in the season did the former mentioned.

Passing from these, let us stop for a oment and consider some famous uses of Daybreak. These were in en-span structures, and grown in- de all Summer in solid beds; and, ain, were wonderful producers of gh-grade bloom even in the late ring when plants in the other houses, ith benches, were throwing small, or flowers.

These houses I have mentioned are w but local history, and yet are val- ble as studies when we consider the estion of houses and benches. We ust allow for the difference in vari- ies, still there is a great deal to be arned from past experiences.

At the present time, our carnations e in four houses—two 30x300 and two x300 feet. One of the wider houses ing two-thirds span to the south, and e others all even span and all run- ng east and west, with a cross-walk the center. The plants in these were nched practically at the same time, d there has been very little differ- ce in the quality and quantity of oom cut, allowing for differences of rieties.

The requisites of a model carnation use seem to be plenty of light and mple top and side ventilation; and, rsonally, I favor the two-thirds span ouse.

A great difference, however, has been ticed in regard to the heating of ese houses; and I do not hesitate to commend the wide house. We find ry little difference in the heating of e high and low houses, and with enty of headroom there should be tter results. Allow plenty of room tween the plants and the glass and tter flowers in the warm weather ill be the result.

In computing capacities we find that ch of our large houses holds about many plants as the two smaller es combined, and throughout the Winter it has taken very little, if any, more heat to keep up the temperature in these large houses than in the small ones holding but half as many plants. The smaller houses are subject to rapid changes in temperature and require more careful watering. It has convinced all who have the handling of them that they are not nearly as economical as the larger houses. One house is more easily handled than two, and the house which can be the most easily heated is the house to build.

How wide to build a house is an open question: but I should say anywhere from thirty five to fifty feet. And I believe it would be unwise to build less than thirty five, and more than fifty a costly experiment. We have a palm house, sixty-five feet in width, that has been very satisfactory; but for flowering plants there is a question.

How long would you build? is another question that is hard to answer. A prominent florist once said to me: "Were I to build again I should build houses fifteen hundred feet long, with a heating station in the center and run pipes in both directions." That might be well, but circumstances nearly always control the length of greenhouses. Whatever style of house you build, be sure there is plenty of ventilation, and use large glass in order to get plenty of light; and do not be sparing of headroom.

Benches.

The benching of a house is an interesting problem. In fact, what in connection with greenhouse management is not a problem? We have grown excellent carnations on solid beds. We have had good success with benches. What, then, is the thing for us to build? I referred to a house of Daybreak grown inside and planted from pots into solid beds. This was a success and gave us good bloom up until July and later. Houses of other varieties have been winners on benches, but they lacked the quality which should be a guarantee of good prices late in the season, although they made up for it by being earlier. At present we are using wooden benches largely, but four solid beds give us better results in the Spring of the year, and this compromise seems to be about right. We want the bulk of our flowers in the Fall and Winter, and our benches give them; while we have a call for high-grade bloom later and the solid beds are then in their prime. Mrs. Lawson planted side by side on both beds and benches give us an interesting comparison, the beds throwing flowers with shorter stems early and giving better quality blooms late. We are now benching a house of the same variety from pots, on both beds and benches, and this early benching may give us better stemmed flowers in the Fall and do away with one serious fault of late planting in solid beds. We have found that we get more bursted calyces from the beds; but more careful watering should counteract this tendency to burst.

In building both beds and benches care should be taken to supply ample drainage, for the carnation will not do its best if the soil becomes in the least water-logged.

The proper width for a bench is another problem, and the tendency to make the benches narrow is more and more noticeable. Four or five rows of plants is enough. By reducing the number of rows more light is given to the individual plants, and with the increase in light come better results.

To sum it all up: Wide, long houses, with plenty of light and ventilation; narrow benches and plenty of drainage, are the important points when building, if carnations are wanted during the Winter months, and for indoor culture and Summer blooming, solid beds, if they have ample drainage.

W. R. PIERSON.

Field Planting at Flatbush, N. Y.

The Dailledouze Bros. finished their field planting on April 25. The weather was most favorable for the operation, and, although a little over seventy five thousand plants were put out, it took only four days to complete the task.

There is probably no firm of carnation growers that makes a closer study of the buyers' needs than does this concern, and the brothers come as near knowing what to grow and what to discard as it is possible to do. Of the plants put in the field that the firm will house and grow for cut flowers, the following is the list:

White, White Bradt, 5,000; May Naylor, 4,000; Governor Lowndes, 1,000; The Queen, 250; and 1,500 each of three white seedlings of their own. Light pink, Genevieve Lord, 7,000; Fragrance, 7,000; Fair Maid, 2,000; Enchantress, 2,500. Dark pink, Mrs. Thomas W. Lawson, 3,000; President McKinley, 1,000, Sibyl, 500. Scarlet, an unnamed sport from General Maceo, 2,000; Governor Bliss, 1,000. Crimson, Harlowarden, 1,000; and an unnamed seedling of the firm's, 4,000. Yellow, variegated, Eldorado, 1,500; Dorothy Whitney, 1,500. White, variegated, Viola Allen, 1,000; Prosperity 3,000.

In addition to the above there are 5,000 plants of one, two and three-year-old seedlings set out. These will go in the houses in the Fall for further trial. Among the seedlings that have flowered once only, there are sixty-three different varieties, all of which are to be tried again in the houses next season.

The outdoor planting has been done on a piece of property about one mile from the greenhouses on a farm bought some time ago by the firm.

A tour through the houses at this time finds many varieties still blooming heavily. Eldorado is a mass of yellow, and Fair Maid proves itself to be a desirable pink sort, by its remarkable show of bloom at this time. Viola Allen is almost over, but we were informed that it has been a great producer and a good paying variety. May Naylor has fully demonstrated its capabilities as a standard kind, and is still producing very heavily. Fragrance never did better than it has done this year, and daily large cuts are still the rule. The firm's crimson seedling is a remarkably fine grower and is producing heavy crops of flowers yet. The color of the blossoms is all that could be wished, and as is seen by the above list this variety will be relied upon mainly for next year's supply of flowers of this color.

Besides the carnations, a large crop of lilies is coming in for Memorial Day. Some houses are being cleared out in preparation for chrysanthemums, the planting of which will be commenced during the coming week.

Boston.

The Week's News.

Herman Thiemann, of Manchester, has invited several of the old guard to spend the day with him on Friday of this week.

Carl Jurgens, of Newport, R. I., is sending in a fine batch of American Beauty roses from a house which has been run cold all Winter. The flowers are remarkably clean, and the stems and foliage are very strong and heavy.

Welch Bros. has sent a man South in quest of hardy ferns for Decoration Day, and from his reports this firm will be in a position to supply at least a million ferns for that occasion.

At Sutherland's several new ideas in "Koral" lettering and designing for the Decoration Day trade are to be seen, as well as a neat lot of metal wreaths, which have just arrived.

The auction sales are booming at McCarthy's salesroom, and have been well attended. At my last visit I saw one of the finest batches of bay trees I have seen hereabouts for some time.

A strike among the boys at Wax Bros., on Tremont street, has been declared this week.

A meeting of the creditors of J. M. Cohen was held Monday, when a committee, consisting of W. H. Elliott, E. N. Pierce and Wm. Anderson, was appointed to confer with the assignee.

George C. Watson, of Philadelphia, Pa., was in town for a few days this week.

F. J. NORTON.

Pittsburg.

Club Meeting.

The May meeting of the Florists' Club, held last week, was fairly well attended. In the absence of the president and vice-president P. S. Randolph was called upon to preside.

The subject for discussion was bedding plants. John Bader furnished several boxes of plants of varieties which were mainly in demand. J. W. Ludwig brought in several varieties of fine double tulips, which were grown at his home. The subject for the June meeting will be "Hardy Roses and Other Hardy Blooms."

News Notes.

Wm. Falconer is now superintendent of the Allegheny Cemetery, having entered on his duties there the first of May. The Department of Public Works is trying hard to induce him to take back his old position, and an ordinance has been introduced into Council increasing the salary to $4,000 per year, the same amount the superintendency of the cemetery pays.

J. B. Murdoch & Bro. have quit the retail florists' business, giving up their storeroom a few days ago, and will devote their time at present growing cut flowers for the trade. The store of Murdoch Bros. was the oldest florist stand in the city, having been in the hands of the same family for over fifty years. The store was sold a few months ago at a good price.

Wm. Hamilton has been reappointed superintendent of parks in Allegheny City by the new Recorder.

E. C. REINEMAN.

Buffalo.

News Items.

The stores generally seem busy, without over-working efforts being demanded.

Rachel M. Rebstock's store has undergone important additions of mirroring of the side walls and window on a liberal scale.

John G. Pickelman has moved his business from the former Washington street location to No. 15 West Chippewa street, popular as a shopping center, and but a few doors from Main street.

The tulips in the beds in Lafayette square are now in good show, albeit in blooms a bit small owing to the dryness occurring in the beds, which are somewhat raised inside of cut stone copings.

J. H. Rebstock's window show this week includes calceolarias, with large and specially handsome colored blooms.

BOSTON, MASS.
WELCH BROS., 15 PROVINCE STREET
We are receiving several hundred AMERICAN BEAUTY ROSES daily, best quality, all grades. Special figures given where large numbers are wanted. Send for price list for Memorial Day, May 30th.
Mention the Florists' Exchange when writing.

Norwalk and South Norwalk, Conn.

Business in the "twin cities" has been quite lively during the past two weeks. There have been several dances, which created a good demand for cut flowers. The High School graduating exercises were held last week, but a rule is now in force that no flowers shall be publicly presented to the graduates, as it engenders undesirable jealousy among the pupils. This was quite a loss to the local florists.

Nursery stock has been in greater demand this Spring than for some time past, probably owing to the late severe frost, which did considerable damage in this neighborhood.

The Smith Estate, of South Norwalk, during the past two weeks has been very busy with funeral work, sending quite a number of pieces out of town. Charles Smith, who manages the business for the Estate, is an up-to-date, go-ahead florist.

At Hanford's Floral Hall, owing to lack of space, a great quantity of the bedding plants had to stand till the Easter stock was cleared out, but it is being hustled along, and a good supply will be in salable condition before the rush sets in. At this establishment a general stock is grown to meet the requirements of a local trade. The rose-house, which is devoted to Bride and Bridesmaid, has furnished excellent cutting the season through, and is still doing well. There are three houses set apart for the leading varieties of carnations, and Mr. Hanford spares neither time nor expense in his efforts to produce the finest of flowers. Ferns are also extensively grown to meet the demands of a growing wholesale trade.

Selectman Sam. Lynes is an enthusiastic carnation grower and his house of assorted varieties has made a fine showing of late.

Malden, Mass.

Edwin A. Kelley, the well-known Faulkner florist, sailed for Cuba on May 1, where he may remain if the place suits him. He has sold his Malden greenhouses.

St. Louis.

ws Notes.

Robert Aull, who was at one time
retary of the St. Louis Fair Asso-
ation, was appointed park commis-
ner by Mayor Wells on Friday last,
bject to confirmation by the City
uncil. As Mr. Aul is a Democrat,
ere is little doubt but that the ap-
intment will be confirmed. After Mr.
ll takes his office he will appoint a
perintendent to succeed F. W. Pape,
o has held the office for the past four
ars under Frank L. Ridgely, whom
r. Aull succeeded. The chances are
at all the parks will have new keep-
s by June 1.

All three wholesale houses were
sed on Thursday of last week in
der to give their employees a chance
view the parade, early in the day.

The World's Fair people are now in
ssession of the Tesson greenhouses.
r. Tesson reports that he has dis-
sed of his lease of the Grand avenue
re; and on his return from a short
sit to Europe he will start building
s new plant on the East Side, which
ll be one of the largest.

The store recently opened by Charles
nnon, at Seventh and Locust streets,
s not a paying venture. The store
closed and offered for rent.

. H. Kuehn is receiving an extra
e supply of L. Harrisii and Ameri-
n Beauty. Carnations are also very
e at this place.

ub Meeting.

The club meeting, which is to be
ld next Thursday, May 14, will be a
ry important one. So says President
nford. A miscellaneous cut flower-
ow will be held, and every member is
uested to bring something to make
e room attractive. Mr. Fillmore re-
rts that his essay will be ready; the
bject is "Soft and Hard Coal Heat-
g." Mr. Fillmore has had plenty of
perience with both, and will there-
re be able to read a very good and
eresting paper, which will be of
me benefit to all of our members.

The trustees are especially requested
be present to arrange for the Sum-
er program.

wling.

The bowling club, Mr. Beneke
ys, will be revived by the end of the
nth, when the league season ends.
meeting will then be called at one
the downtown alleys to start bowl-
g once a week, so that the club may
in shape this Summer to select a
am to bowl at Milwaukee. The old
b has still some good timber left
make up a first-class team, if we can
ly get the boys to practice once a
ek. ST. P.

Cincinnati.

ws Jottings.

Cold and chilly weather still pre-
ils in this section; for the past two
ghts we have had killing frosts and
outdoor stock suffered. The market
rdeners are the ones who suffered
st.

Business keeps up unusually well
d stock is fairly good and sells at
d prices. Monday night the Munici-
l Code goes into effect, and when
uncil assembles they will be greeted
the greatest display of flowers ever
n in this city. All the retail stores
ve large orders to fill, and the writer
s furnished to the florists over one
usand American Beauty roses, to
used upon this occasion. These were
long-stemmed fine stock, and came
m Heller Bros., of New Castle, Ind.

The residence of J. P. Ernsterhoff,
wport, Ky., was damaged by fire one
rning last week. The neighbors all
ned out and saved nearly all of the
usehold goods; but the building was
ned to the ground. Mr. Ernsterhoff
one of the oldest florists in this vi-
ity, and is well off. The greenhouses
re not damaged to speak of.

. A. Peterson, on the advice of his
tor, is spending ten days at French
k, Ind.

Frank Sneider has leased a piece of
und of Wm. Murphy and will erect
ange of greenhouses. Chas. Murphy
also erecting a few houses to grow
nations.

The Ohio Cut Flower Company has
ved from its old quarters to the cor-
of Main and Third streets. Four
mmission houses are now on one
are.

n Saturday occurs the next meeting
the Cincinnati Florists' Society.

E. G. GILLETT.

Chicago.

General News.

All the large growers of American Beauty are busy replanting their houses. A large increase of space over that of last year will be devoted to this rose in this locality. Peter Reinberg has his new range, to be used for American Beauty, well under way.

The J. D. Thompson Carnation Company, Joliet, Ill., has one house planted to Mrs. Thomas W. Lawson and Enchantress. The plants are as large as those planted in the Fall the first year this establishment was in operation, and are a great deal larger than a good many growers had them last Fall at the usual planting time. They will be given the same treatment as those planted in the Fall; that is, they will be kept pinched back for a certain length of time. This firm thoroughly believes in growing their carnations inside. Just now they are cutting some nice stock. Prosperity is yielding a supply of fine flowers, as is Governor Roosevelt. The concern's young stock is in A1 condition, and in large quantity, so that a good opportunity for selection is furnished. This firm has made provision to plant the following varieties and numbers: Enchantress, 8,000; Nelson Fisher, 4,000; Mrs. M. A. Patten, 4,000; Governor Wolcott, 12,000; Boston Market, 4,000; Apollo, 8,000; Prosperity, 4,000; Estelle and Mrs E. A. Nelson, 4,000 each; Adonis, 2,000; Peerless, 3,000; Governor Roosevelt and Harry Fenn, 1,000 each.

Adonis as seen here seems to be a fine grower. The plants are sturdy, with good bloom on the foliage; practically no loss has been sustained with this variety, and if it could be grown by everyone as it is done here, it is sure to be a winner.

This firm will offer a fifty-dollar silver cup for the best vase of 100 blooms of Enchantress to be shown at the Detroit meeting of the American Carnation Society, the trophy to be known as the "Fisher and Thompson Cup."

T. D. Mosconotes had the decorations for the Vilas-Hayden wedding. Those for the church and home were in white and green. The work was under the superintendence of H. Klunder, his manager. The bridesmaids' bouquets were of maidenhair fern.

J. T. Helbrook is building a store and greenhouse, 12x125 feet, opposite the Wrightwood avenue station of the Northwestern elevated railroad.

E. Benthey is again seen at his place of business after a week's illness.

Visitors in town this week included: Otto Benthey, New Castle, Ind.; S. S. Skidelsky, Philadelphia; H. V. Hunkel, Milwaukee, Wis.; J. T. Buckbee, Rockford, Ill.; G. A. Washburn, Bloomington, Ill.; W. A. Gonter, Battle Creek, Mich., and A. S. Halstead, Belleville, Ill.

ROBERT JOHNSTONE.

Indianapolis, Ind.

News of the Week.

The State Florists' Association held its monthly meeting Tuesday evening, May 5, at the Commercial Club Rooms. A local paper has it that the aforesaid association was to discuss the advisability of boycotting the wholesale florists who sell flowers to department stores in this vicinity. No doubt the more level-headed members discovered the absurdity of such a proposal, and squashed it in its infancy.

This State has been visited by heavy frosts lately, and serious damage has been done; fruits, berries and shrubs, lilacs and other outdoor flowers have been rendered almost unfit for use. Customers who clamor to have their bedding done the first day of May have been taught a lesson not soon to be forgotten.

Tomlinson Hall market is kept filled these days with all kinds of bedding stock. Of course, the date is a trifle early, but quite a quantity is disposed of.

Visitors: J. A. E. Haugh, Fred Dorner, Jr., and Herbert Heller. I. B.

San Francisco.

Spring Exhibition

Chairman J. W. Bagge and his associate members on the committee of arrangements, H. Plath, Wm. Eldred, Chas. Fick, P. Rock, Thos. M. Monro, F. Ludemann, and N. Peterson, are feeling very much better than was their condition of mind through fear that there would be a shortage of exhibits, particularly of outside flowers, as indicated in last week's report. They have worked hard meantime, the result being an abundance of exhibits.

The general verdict is that a more artistic arrangement of flowers has never been seen at any show in San Francisco than the present Spring exhibition of the Pacific Coast Horticultural Society. The first night's turn-out of patrons was a notably large and fashionable one.

The judges—George Walters, of Ross Valley; Sidney Clack, of Menlo Park, and H. W. Waddington, of San Francisco—made the following awards:

Roses, best collection grown under glass, Ferrari Bros., first; best field-grown, F. W. Ludemann, first; best vase American Beauty grown under glass, M. Aebi, first; best vase field-grown Rainbow, F. W. Ludemann.

Carnations, best collection, first, Sievers Co.; best vase Mrs. T. W. Lawson, Carboni Bros.

Iris, best display, Mrs. W. H. Crocker, Burlingame; pelargoniums, best collection, Sievers Co., first; McLean, second. Pansies, best collection, McLean, first; G. A. Pope, second. Lilies, best display, Mr. Young. Shrubs, flowering, best collection, W. H. Crocker. Decorative plants, staged for effect, Sievers Co., first; H. Plath, second. Best single sago palm, Sievers Co. Ferns, best collection, also best single, H. Plath. Flowering plants, Ferrari Bros. Pansies, best collection, Serveau Bros. Orchids, first, Sievers Co. Rhododendrons, best and largest exhibit, F. W. Ludemann.

Best hanging basket, H. Plath. Prize floral designs, under $10.00 (other than funeral), R. Hilbert's basket of iris, lily of the valley, ferns, and green satin ribbon bows; second, F. Cleis' heart design of roses, etc.; third, basket of red carnations, B. B. Welch.

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

l. XV. No. 20 NEW YORK, MAY 16, 1903 One Dollar Per Year

you want the best paying crop that you can plant for Summer, plant

HE PIERSON FERN

(Nephrolepis Piersoni)

here is nothing you can plant that will increase in value so rapidly as this. The nd has been so great and our advance sales so large that we have not offered it tly, having only just completed filling our advance orders. We have a nice lot of g stock coming on, and can fill all orders received from this date promptly on receipt.

ven at the present high price it has been impossible to keep up with the demand, there is sure to be a tremendous demand for it another season when it can be offered wer prices. **Now is the time to invest** in it and get the benefit of the endous demand and good prices which are sure to prevail another season.

he **BOSTON FERN,** although it has been cultivated many years, is still scarce. ephrolepis Piersoni will sell [illegible] l be in greater demand even than the Boston , we predict a scarcity of [illegible] s Piersoni for several years to come and at big s. Owing to the great [illegible] ed demand, we do not expect to be more than to meet the demand this spr[illegible] o that customers can rest assured that there will o change in price this season.

offer strong young plants in 2¼-in. pots, at $9.00 per doz.; 50 plants 0 cts. each; 100 plants at 50 cts. each; 500 plants at 45 cts. each; 1000 plants at 40 cts. each.

ra large plants, 6-in. pots, $27.00 per doz.; 50 plants at $1.80 each; 100 plants at $1.50 each.

These large plants will make fine stock for growing on into large specimen trees for fall le, and they are also very nice for immediate sales.

SEED TRADE REPORT

AMERICAN SEED TRADE ASSOCIATION

Walter P. Stokes, Philadelphia, President; C. N. Page, Des Moines, Iowa, Vice-President; C. S. Burge, Toledo, Ohio, Second Vice-President; S. F. Willard, Wethersfield, Conn., Secretary and Treasurer; A. N. Clark, Milford, Conn., Assistant Secretary.

FRENCH BULB SITUATION.—The conditions created by the growers and dealers of French bulbs are such that the exports of white Roman hyacinths to the United States next August and September are not likely to be more than, say, 25 per cent. of the quantities shipped last season.

The leading large American importers have recently been in conference on the subject. It is from records of sales made by them to the florists, to date, on which the above figures are based.

This condition may, in the long run, have good results. One need not look for the cause of the reduced sales. The fact is, the average price for a good white Roman hyacinth spike was 3c. last season. Even when flowers were scarce, the florist does not get his money back at this figure.

Frenchmen are now asking from 95 to 100 francs per thousand, f. o. b. Ollioles, for 12 to 15 centimeter bulbs. This means a cost, after paying duty, freight, and other expenses, of between $26.00 and $27.00 here, practically the price the florist gets for the flowers, but with no allowance to him for growing.

There are so many things that take the place of the Roman hyacinths, including some of the Dutch bulbs, that the hardship, if such, will not be to our growers, but to the Frenchmen; therefore, we can afford to look with indifference on their suicidal course.

On May 9, C. L. Allen, seedsman, of Floral Park, N. Y., addressed an audience of negroes at Cum City, L. I. He said that the great thrift and industry they had shown, as a result of which they had acquired comfortable homes and a position of trust in the community, was an evidence of the capability of their race. He paid a high tribute to the Cum City men as gardeners and farmers, and said they were on the high road to the fullest success in their calling.

PAMPHLETS RECEIVED.

E. NEUBERT, Wandsbek, near Hamburg, Germany (by August Rhotert, New York). Pamphlet giving a few details regarding lily of the valley production—Multibell and Berolena, early forcing, and Polaris and Hansa, late forcing. Mr. Neubert started in business twenty-two years ago; his present cultures on 200,000 square metres of land exceed more than 20,000,000 pips of his own production, in addition to the crops of many small experienced gardeners in his surroundings.

The pamphlet, which is fully illustrated, gives particulars regarding planting, cultivating, harvesting, storing and shipping the pips. It is stated that very little manuring is done the second and third year, but in the third Winter fertilizing with fish guano has been very successfully applied.

PEAS AND THE PEA WEEVIL. Bulletin 126, Ontario Agricultural College, Toronto, Ont. This bulletin treats upon the subject exhaustively, and recommends various agencies for the destruction of the pest named. The average market value of the threshed peas grown in Ontario during the past twenty years amounted to fully eight million dollars a year. In 1897, no less than 896,735 acres were devoted to the pea crop, this being the largest area under peas in any single year. Since that date, however, there has been a gradual decrease until the year 1902, when only 532,639 acres of peas were grown. This decrease is "undoubtedly due to the great damage done to the crop in southwestern Ontario by the pea weevil."

"It is frequently stated that the grub, when working in the pea, avoids the germ or embryo, and that peas which are bored with the weevil are as valuable for seed as those which are not thus injured. Such statements are wholly incorrect." Examination has demonstrated that the grubs show no inclination to avoid the germ. Moreover, germination tests, carried out on several occasions with injured seeds, have proved conclusively that but a small percentage of these seeds germinate, and a still smaller percentage develop into vigorous plants. Fumigating with carbon bisulphide in specially prepared boxes, barrels and air-tight chambers, or "bughouses" is recommended. A pound or a pound and a half of carbon bisulphide is generally considered sufficient for 100 bushels of peas. Immersing infested seed in boiling water for one minute, then quickly removing the seed, has been tried, but not widely adopted; and for small quantities such as seed peas, the coal-oil treatment is recommended. It is described as follows: The peas are spread on a thin layer, about six inches deep, on the barn floor, and the oil is sprinkled over the seeds through a machine oil can. Then the peas are turned over very thoroughly so that every pea becomes coated with a thin film of oil. In this condition the peas are left for two or three days, when it will be found that the weevils have been killed. One quart of oil is sufficient for twenty bushels of peas.

Nursery Department

AMERICAN ASSOCIATION OF NURSERYMEN

Charles A. Ilgenfritz, Monroe, Mich., President
D. S. Lake, Shenandoah, Ia., Vice-President
George C. Seager, Rochester, N. Y., Secretary,
C. L. Yates, Rochester, N. Y., Treasurer.

Irving Rouse, the well-known nurseryman, of Rochester, N. Y., has been appointed by Governor Odell a trustee of the New York Agricultural Experiment Station of Geneva, N. Y.

Ellwanger & Barry, Rochester, N. Y., have shipped three carloads of selected ornamental stock to St. Louis, for planting in the exposition grounds.

It has been suggested that the American Association of Nurserymen carry the case of the recent decision of the Board of General Appraisers relative to evergreen seedlings, to the United States Circuit Court. Under the present ruling, it is said, the American grower of larger evergreen plants from seedlings is less protected than under the 25 per cent. ratings.

Some 20,000 bamboo plants imported from Yokohama, Japan, for the Golden Gate Park, San Francisco, have been admitted free of duty, through a decision of the general appraiser. It was maintained that the plants were exempt from duty under the tariff act because the Golden Gate Park is a public ground; also because the plants were specially imported for the sole use of the park.

LAWRENCE, KAN.—The firm of A. C. Griesa & Brother has been succeeded by A. C. Griesa, who has purchased his brother's interest in the concern.

DES MOINES, IA.—Fire of an unknown origin, on May 7, destroyed the building used as shipping quarters by the Grand View Nursery. Loss, $1,000; no insurance.

Timely Suggestions.

As shrubs flower see that all are true to name. Label any spurious ones that may appear, and remove them in the Fall.

Labels on bought in stock as well as others soon become illegible; see that all are renewed before too late, and that the spelling is accurately rendered.

Stock recently planted and not pushing well should be closely pruned at once. If a few leaves have been made, try not to cut these away.

Finish sowing all seeds, whether of evergreen or deciduous trees. Shade the beds with lath frames, if possible.

Make record of the colors of rhododendrons and azaleas before they go out of flower, for the information of future customers as well as for your own use.

Catalpas and mulberries push very late, enabling grafting to be accomplished even to this date.

As soon as the selling of trees and shrubs has passed, go over the stock and prune into shape such as require it.

Get bills mailed to customers at once, aiming to make collections quickly. Have customers satisfied with you, unless convinced they are dishonest.

As shrubs pass out of flower, give them a pruning, to make them shapely and bring a better price.

Keep a record of the time of flowering of everything you have for sale It is indispensable for cataloguing, and of the utmost service to customers.

Trees too large to transplant safely can be made tractable by root pruning them now. Dig around them, severing all large roots met with. A year later they will be in fine condition.

Shrubs to be layered should have a good deal of their top growth cut away to encourage the lower branches.

In the rush of Spring work the tidiness of the ground and office is often overlooked. Clean up as soon as possible. It attracts custom.

Transplanting Evergreens.

A common question of the day is, Is it too late to transplant trees? When deciduous trees have made leaves it is past the time for best results, but with care, the cutting away of the greater number of leaves, not all, and a thorough soaking, nurserymen have fair success moving them.

With evergreens a great deal depends on the kinds. If pines, and they have made lengthy shoots, it is better not to attempt it. Other kinds are not so hard to move, if not too far in growth; but to have a fair chance of success the soil must be rammed in very hard and a good watering given them. A firm ramming of the soil, until the hole is half filled, then a drenching of water and a filling in of the hole the next day is the program.

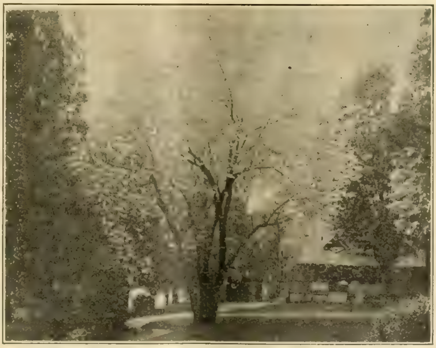
Late plantings are to be tolerated only when unavoidable. The growth of a season is lost by it, and nothing gained beyond having the tree in position. It is better to wait until late Summer and gain the season's growth thereby, and run less risk of losing the tree.

Double-Flowered Paeonia Tenuifolia.

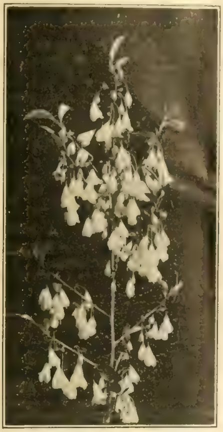
Among the early flowering herbaceous plants of brilliant color, it is doubtful if any leads the double-flowered Paeonia tenuifolia. The flowers are large and of a brilliant crimson, surmounting stems of about a foot in length, which are clothed with leaves of such a slender appearance that its specific name, tenuifolia, is well applied. Add to this, that it is one of the hardiest perennials, the single form being a native of the Crimea. This season it is in flower with us with the lilacs—the first week in May—leading all other sorts in our collection.

The brilliancy of the blooms of this species offers unusual opportunities for massing for display. In collections the plants would be useful as following the gorgeous showing made by tulips. In a single line, a number of plants of this peony is very effective, as, indeed, can be said as well of a single plant.

The increasing of the peony by division of the root may be accomplished in early Fall or quite early Spring. There are many beautiful sorts in cultivation, and when getting together a collection do not overlook the double P. tenuifolia.



HALESIA TETRAPTERA SNOWDROP TREE SILVER BALL



Flowering Branch of Halesia Tetraptera.

Herbaceous Vinca.

The common periwinkle, or vinca, is known to everyone, the many situations falling for a low-growing, evergreen plant bringing it forward for the purpose. Useful as it is, in some respects the herbaceous species Vinca herbacea is its equal. As the latter is herbaceous, there is nothing of it above ground in Winter, but in Summer it clothes the ground fully as prettily as does the common one. In some respects it does better. It makes longer shoots, and these lie prostrate to the ground. The flowers are in profusion early in May, and are of a bluish purple color.

As a close-growing, pretty, hardy Summer vine, florists find it useful for cemetery work.

Sweet Scented Crab Apple.

An uncommon tree in cultivation, as, in fact, it is in its wild state, is the sweet-scented crab, Pyrus coronaria. When it is seen, and it has been uncrowded, it forms a small, bushy tree of beautiful shape. Just now, early May, the specimens seen are loaded with sweet-scented, light pink flowers, Later on little apples appear, which are esteemed in the making of preserves. The delicate perfume of the flowers is perceptible at quite a distance from the bush.

This flowering crab is increased by budding or grafting it on common apple stock.

The Western crab is distinct from this one, and is known under the name of Pyrus ioensis. The lovely Bechtel's double-flowering crab belongs to the Western one. It blooms a week or two later than the Eastern one does.

Magnolias in Pots.

Unless magnolias are set in Spring when dug from the ground, they rarely live. Just why it is that a disturbance of their roots at any other season is resented by them is not known, but dig one and plant it in the Fall of the year, and ill luck attends it. Nurserymen have found it a great disadvantage to them to omit from their planting lists in Autumn the magnolia, and to obviate this many of them are carrying a stock in pots or tubs, to have them for planting at any season. At almost any time in Spring if dug with care, the magnolia may be transplanted, an excellent time being just as buds are breaking. The species M. acuminata is a stubborn customer, and must be pruned almost to bare poles, to approach success in the planting of it.

When in pots or tubs, transplanting can be done at any season, just as a geranium can be set out. There need be no disturbance of roots, as the sides of the boxes can be removed after they have been set in their holes, and is done now with evergreens and other plants in tubs.

The evergreen magnolia, grandiflora, is grown in pots altogether in some establishments, because, being evergreen, it is more difficult to transplant from the open ground than the deciduous ones are. This is the season to pot the magnolia.

JOSEPH MEEHAN.

Halesia Tetraptera, Silver Bell, Snowdrop Tree.

In nurserymen's catalogues one rarely knows whether to look for Halesia tetraptera among trees or in the shrub list. Left to itself, it grows in shrub shape, though attaining the height of a tree in time. Old botanical works say of it: "Shrub or small tree, 10 to 20 feet high"; but here is an illustration of one which is about 40 feet high, and in the old Bartram Botanic Garden, Philadelphia, specimens equaling it in height have been observed. Andrew Whitelaw, who sends us this illustration, says of it: "The picture shows the corner of the Summer cottage of Mrs. J. A. Robinson, at Darien, Conn. As you will see, the house is a low, old-fashioned structure, originally a farmhouse, which has been added to until it is now a good-sized building which does not show in the picture.

"The late Dr. Alonzo Clark bought this property in 1863 and planted and improved it to suit his ideas, so I judge the halesia was planted soon after he acquired the property, which would make the plant about forty years old. It is grown in bush form, has five main trunks (or stems), three of them each having a diameter of a foot; the other two are smaller. The height of the tree is about forty feet, and the extreme diameter, or spread, is about forty-five feet. It is completely covered with its beautiful snowdrop blossoms every year in May, and as the flowers come before the leaves unfold, it makes a charming picture against a background of evergreens. When the flowers fall the lawn underneath is so thickly carpeted with them that they have to be raked up and removed."

It does, indeed, present a charming picture wherever planted. On the grounds of the late Thomas Meehan, Germantown, Philadelphia, there stood a very fine specimen up to two years ago, when it was broken badly in the memorable ice-storm of that date. The photograph of the spray gives a good representation of the general appearance of the branches when in flower.

This species, H. tetraptera, is found wild from Virginia southward, and is common in gardens in the Northern States. It has been so long in cultivation in the North that it is propagated there wholly from seeds gathered from these trees, and this, no doubt, adds to the hardiness of it.

Another species, H. diptera, a native of Carolina and southward, thrives as far north as Philadelphia, but, being less hardy than the other, is never seen at its best in the North. About Philadelphia it blooms two weeks later than H. tetraptera.

As usually described, it is classed as flowering before the leaves, but "with the leaves" is a better term. It is true, but few leaves are expanded, but on the ends of the twigs the leaves are partly developed at flowering time, as a glance at the illustration will disclose.

Every Florist

SHOULD OWN THE FOLLOWING WORKS; THEY ARE STANDARD AND UP-TO-DATE

The Landscape Artist

RESIDENTIAL SITES AND :: :: ENVIRONMENTS :: ::

. BY ..
Joseph Forsyth Johnson
F. R. H. S., CONSULTING LANDSCAPE GARDENER AND GARDEN ARCHITECT

A KNOWLEDGE of landscape work which will enable one to undertake successfully the work of gratifying the desire of cultivated people for tasty, attractive surroundings for their houses, be they 25 x 100 ft. plots or broad acres, is well worth all the effort that may be required in the learning. If you study "Residential Sites and Environments," a practical work by a practical man, easily read and assimilated, it will give you a knowledge of the essentials and possibilities of landscape gardening that will enable you to avoid costly errors and to make your own home grounds, or those of your customers, a "joy forever."

Illustrated with over fifty descriptive Plans, Diagrams and Illustrations, with lucid descriptive text and all necessary information for the laying out of Home and Public Grounds, showing principles and adaptations of planting suitable to all requirements from Villa to Mansion. Superbly printed, in new clear type, on the finest wood cut paper, cloth. Price, $2.50, by mail, postpaid.

FOR YOUR CUSTOMERS

Success with House Plants

..By..
LIZZIE PAGE HILLHOUSE

A COMPLETE text-book and guide to the care, cultivation and propagation of all plants in the garden and the home.

The volume is written by a woman for women, in plain, concise language, easily understood, and the book has the special merit of giving directions which can be readily followed, the methods prescribed being of the simplest, and the material suggested to be used easily within reach of all.

12mo., 232 pp.; profusely illustrated, with complete and ready reference index to all plants enumerated. Price, Cloth, $1.00; Paper, 50 cents.

To Retail Florists. The old thought, that it was dangerous for a customer to know much about the care of plants, has passed away, being superseded by the newer and more intelligent one, viz: that the more successful a customer is with plants, the greater quantity will he or she buy.

We offer Special Inducements to all who wish to handle this book. It is a good seller. Send for sample pages.

The American Carnation

How To Grow It

A Standard Work Written by Request of the Publishers of the Florists' Exchange.

By C. W. WARD

THE CARNATION in America has reached a status and importance in the florist's industry possessed by no other flower of modern times, and a practical work on the subject of the cultivation of the plant has become an urgent necessity. This want is fully and completely met in the present volume, which furnishes the results of years of actual experience of the author, who is recognized as being among the foremost of carnationists in America. The scope of the book will be gleaned from the subjoined table of contents:

History and Development of the Carnation—The Carnation in America—The Commercial Importance of the Carnation Industry—The American Carnation Society—Use of Carnations as a Decorative Flower—General Greenhouse Culture—Soils—Manure and Fertilizers—Propagation and Shipping of Young Stock—Treatment of Young Stock preparatory to Planting Out—Field Culture—Lifting and Planting Carnations from the Field—Treatment after Benching—Picking, Packing and Shipping Carnation Flowers—Insects and Preventives—Diseases and Injuries—Packing and Shipping Field-grown Plants—Forcing Houses for Carnations—Bench Construction—Sub-irrigation—Heating Carnation Houses—Carnations for Summer blooming—Bedding and Hardy Carnations—Carnations for Pot Culture—Raising Carnations from Seed—Cross breeding and Fertilizing—Varieties—Sports and Variations—The Ideal Carnation—Traits and Peculiarities—Various Classifications of the Carnation—List of Varieties for Different Localities—The Future of the Carnation—Its Commercial aspect and Prices—Who shall engage in Carnation Growing—Does it Pay to do things Well—Calendar of Operations—Carnations in California, Canada, in the West, the East, the South.

It will at once be seen that a work of this nature should be in the hands of every florist and others interested in the subject who desire to keep abreast of the times, and to make the growing of carnations, by the most modern methods, a profitable part of their business.

The Book is profusely illustrated by original engravings from life made specially for this work, with four colored plates. Handsomely printed from large, clear type on fine enameled paper. Quarto, cloth. Price, $3.50.

Offices: 2 to 8 Duane St., N. Y. Address P. O. BOX 1697, NEW YORK CITY

THE Water Garden

BY
William Tricker

A Standard Work Written by Request of the Publishers of the Florists' Exchange

THE cultivation of the Lotus or Water Lily, and other aquatic plants, is easily the most fascinating of all pursuits, and this is the only book ever published on the subject. The writer is the standard authority for America. Every detail is covered, all water plants described, and no other guide is needed.

The text describes all operations from the growing of plants in tubs to the large water garden, excavation of ground, construction of ponds, adapting natural streams, planting, hybridizing, seed saving, propagation, the aquatic house, wintering, correct designing and planting of banks and margins, and all other necessary details. The work contains nine beautiful plates, eighteen full page descriptive views of leading water gardens and ponds, and numerous smaller pictures prepared with special reference to this book. Printed on heavy enameled paper. Elegantly bound. Large octavo; cloth. Price, $2.00, by mail, postpaid.

DEAN'S SYSTEM OF GREENHOUSE HEATING

By
MARK DEAN

DO YOU WANT TO KNOW

HOW
To determine the area of any greenhouse?
To tell the amount of radiation necessary to heat the same?
To place the heating pipes to best advantage?
To figure what the pipes and fitting will cost?
To set up a boiler?

DEAN'S SYSTEM OF GREENHOUSE HEATING is the name of a new book which will fill a long felt want, because it has tables all figured out giving the amount of radiation and number of pipes necessary for greenhouses of all sizes, formulas for obtaining different temperatures, radiation per lineal foot of pipes of various sizes or the number of feet of radiation in any number of feet of pipe, list prices of pipe, pipe fittings, etc., besides much other valuable information. Handsomely bound. By mail, postpaid, $2.00.

A. T. DE LA MARE PRINTING AND PUBLISHING CO. LTD.
Offices: 2 to 8 Duane Street, N. Y. Address P. O. Box 1697, NEW YORK CITY

Plant Culture

By **GEORGE W. OLIVER**
OF THE BUREAU OF PLANT INDUSTRY, UNITED STATES DEPARTMENT OF AGRICULTURE. LATE PROPAGATOR TO THE UNITED STATES BOTANIC GARDEN, WASHINGTON, D. C., AND THE ROYAL BOTANIC GARDEN, EDINBURGH

A Standard Work Written by Request of the Publishers of the Florists' Exchange

A WORKING hand book of every day practice for the Florist and Gardener, and those who intend to grow plants and flowers, in the greenhouse or garden, as a means of obtaining a livelihood. Each and every article is written in concise, simple language, and embodies wholly and solely the experience of the writer.

The plants dealt with comprise those which are commercially handled by Florists, Gardeners and Nurserymen, and include Florists' Flowers, Stove and Greenhouse Plants, Hardy Herbaceous Plants, Annuals, Shrubs, Hardy and Tender Vines, and a chapter on miscellaneous subjects in connection with the above.

This reliable cultural book has been gotten up for use not ornament, therefore the price has been fixed at a figure within the reach of all, while it contains more real practical information for those for whom it is intended than is found in much more pretentious works costing five, ten and twenty times as much money. Cloth; strongly bound to stand rough handling and plenty of it. Price, $1.00, by mail, postpaid. Send for sample pages, free.

---

Cyclopedia of American Horticulture

By **L. H. BAILEY**
of Cornell University
ASSISTED BY WILHELM MILLER AND MANY EXPERT CULTIVATORS AND BOTANISTS

THOUGH distinctly an American work, not only plants indigenous to the North American continent are mentioned, but also all the species known to be in the horticultural trade in North America, of whatever origin. It is really a survey of the cultivated plants of the world.

The chief characteristics of this great work are comprised in our describing its source, scope and general features. It is **Authoritative** since its contributors are the best specialists in America, and there will be at least 5000 signed contributions from the best-known horticulturists, cultivators and botanists in this country and Europe. It is also most **Comprehensive** in that it presents for the first time in carefully arranged and perfectly accessible form the best knowledge of the best specialists upon greenhouse and garden practice, fruit growing, vegetable culture, forestry and the like. It is moreover fresh, entirely **Original**; not a rehash of old material, old cuts, etc. The articles are specially prepared and illustrated for this work alone; while the trained botanist discusses the botanical features of the important commercial plants, practical cultivators submit observations on their culture, marketing, and the like, so that the reader has before him the very best practice in the most favorable localities for the perfection of any fruit, vegetable or economic plant. The arrangement is very systematic, clear and convenient for ready reference.

In Four Quarto Volumes. Illustrated With over 2000 Original Engravings. Price $20.00.
For further particulars, terms of payment and sample pages, write

Massachussetts Horticultural Society.

At the regular May exhibitio the society at Horticultural Hall Saturday quite an interesting shov flowers, plants and vegetables made.

Jas. Stuart, gardener to Mr. Geo Fabyan, made the most attractive play of plants, staging eight calce rias, which conservative garde branded as the finest plants ever hibited at the hall. Two imm plants of superior cultivation awarded the two prizes for speci plants, while a first premium was g for the collection of six. Prizes also awarded for Indian azaleas pelargoniums, Mrs. A. W. Blake ceiving the honors in the former c for a collection of six plants an specimen plant. Mr. E. J. Mitton (Lawson, gardener) won for pelarg ums. Mr. J. E. Rothwell (Emil hannson, gardener) made a very in esting and attractive display of orc in twenty-six varieties, for one which, a seedling, Lælio-cattleya cinnabarina × C. Percivaliana), he ceived a certificate of merit. Jas Little made a very fine exhibit amaryllis and streptocarpus, and A. W. Blake's display of clerodend was very attractive.

In the cut flower room prizes offered for tulips and pansies, brought out some very good exhit William Whitman winning in the mer class and J. B. Shurteff, Jr., Mrs. E. M. Gill receiving first and ond respectively for the latter. E. Coburn also showed a fine lot pansies and hardy primroses, and Chas Pfaff had a collection of cut g niums and pelargoniums, among latter being two seedlings, "Mrs. C Pfaff" and "Col. Chas. Pfaff." E. M. Gill staged a collection of seas able flowers, and Edward S. Cob brought in a good collection of na plants.

An auction sale of palms abando to the Government by the impo was held by the Collector of the May 14, 1903. The plants included K tias Forsteriana and Belmoreana, Latania borbonica.

F. J.

Norwalk, Conn.

The Summer-like weather of the p week has brought out the flowers great profusion, and the supply greater than the demand. Fune work keeps business fairly brisk.

Carnation growers in this district anxiously looking for rain to ena them to go ahead with their field pla ing. The soil is dust-dry for a cons erable depth and outside work is a standstill.

E. R. Sherwood is cutting some v fine flowers of Mrs. Joost and Floria He reports that since shading south sides of his carnation houses flowers have greatly increased in si

Hamilton.

d Minto, Governor-General of da, will visit this city on Thursday Friday. Floral decorations are ise; it is said that Lady Minto is at admirer of flowers. At the tertion of their visit the party will be ucted through the "Garden of Can- as far as Grimsby. That part of ountry is a great show at present its millions of fruit trees in full om. E. G. Brown is supplying the rs for the decorations at the ilton Club.

Kilvington is doing considerable ing out—rather early in the season, he weather now appears settled.

bster Bros. are very busy. Their ing department presents a scene nsiderable activity at this season. wn's are finding a heavy and ly demand for cut stock. They been dropping out of bedding s for several years and will, they discontinue this branch altogether year. The filling of baskets and ow boxes has also been dropped more remunerative lines. Their are still giving good crops.

e tree pruning, under the supern of the Parks Board, was brought sudden stop by the issuing of some ictions by the citizens. It was ght that tree butchering methods d under the management of the d be done away with, but from the point of view of certain citizens it is "out of the frying pan into the fire."

George N. Sones, florist, corner Grant and Niagara streets, died on the 11th inst. He had been located in Hamilton a number of years and had built up a very nice business. He leaves five sons and two daughters. The business will likely be continued. BEAVER.

Montreal.

General News.

No rain has fallen in this section since April 7 and the probabilities are that the weather will continue fine and warm for some days yet. This is indeed very serious for farmers, who all report grain hardly sprouted and the grass burning up in places. All classes of cultivators are suffering to a certain extent and it is to be hoped that the drouth will soon be broken.

The tulip display is not nearly as good as last year, owing to the drouth. Pansies, as well as all herbaceous plants, are growing but very little.

T. J. Gormon will build a new house for chrysanthemums this season. He reports the sale of roses as being brisk; carnations also are eagerly sought after.

L. H. Goulet is now settled in his new store, which is the handsomest in the east end. The interior is painted white enamel, with touches of gold. The store is lighted with Auer lights in clusters. W. C. H.

TORONTO.—Business continues good. The visit of the Governor-General is making things quite lively, and most of the retailers are doing a fine trade. Roses, carnations and tulips are still good and plentiful; also lily of the valley and mignonette. The plant trade is beginning to get quite active and St. Lawrence market on Saturdays is quite a busy place. In all other businesses the prices of produce are higher this Spring, but the plantsmen are already offering some of their stock as low as ever. Boxes of apparently good annuals, twelve in a box, are being sold at retail for 7c. per box; I don't know what the grower gets over the fun of growing the stock.

The last meeting of the Horticultural Society was a very good one and largely attended. Wm. Hunt, from Guelph, gave an interesting lecture on roses and their treatment. THOS. MANTON.

New York.

of the Week.

S. C. Nash, of Clifton, N. J., will te to roses three 100-foot houses h were in carnations last year.

ks & Crawbuck, the Brooklyn esale florists, who have been coning a branch store at 45 West 29th t, New York, will devote all their gies to the Brooklyn store during Summer months, and have closed New York store.

Fleischman, the Broadway florist, been doing jury duty under Cor- Scholer on the "barrel murder" Mr. Fleischman has been sufg from a severe attack of indiges- and couldn't attend to his duties. coroner thought Mr. Fleischman's ices too valuable to be dispensed and decreed that the testimony ld be read to him.

C. Steinhoff arrived home from nuda last Saturday.

the present demand for softwooddding plants, at the auction room m. Elliott & Sons, is indicative of season's business, we may feel as- that the trade in this class of ts is going to be good. At the sale Tuesday cannas in flats and gerais also sold at good figures, and supply offered, which was large, quickly snapped up by anxious rs. Heliotrope, rose geraniums, n verbena and coleus were also in demand, and it required but little t on the auctioneer's part to dis- of the stock.

L. Miller, Jamaica avenue, Brook- has had an unusual heavy ded for Spring bedding plants. Pan- are always grown by the thousands hese premises, and this season two omers alone took 100,000, one taking 0 and the other 40,000. The outdoor len, which, by the way, is a great ure at this place, promises a wealth lowers from now on to Memorial . Iris and peonies are already flowg profusely, and the Japanese snowballs, of which there is a good collection of standard-grown trees, are budded to their utmost capacity and promise to be just about right for the thirtieth of the month.

At Mr. Miller's Jamaica establishment the greenhouses are devoted to bedding stock, geraniums principally. Herbaceous plants are also being cultivated to a considerable extent; some five acres have already been planted.

We are informed that American Gardening, the publication of which has been suspended for several weeks, will be resumed in the near future.

J. Austin Shaw will take up his residence for the Summer shortly at City Island, N. Y.

An adjourned meeting of the stockholders of the Cut Flower Exchange will be held on Saturday, June 6, at 9 a.m., in the offices of the company, corner Twenty-sixth street and Sixth avenue.

A meeting of the creditors of A. V. D. Snyder, Ridgewood, N. J., was held on Friday, May 15. Mr. Snyder has had financial difficulties, and we understand that a certain percentage will be paid on the dollar, after which the business will be resumed, though under a different firm name.

Florists' Club.

The club met on Monday evening, May 11, President Troy in the chair. The various committees appointed presented resolutions on the death of Messrs. Donaghue and Withers. F. H. Traendly, of the outing committee, reported progress on this interesting event, and stated that $300 more or less has been donated by various friends of the club, which amount would be divided up as prizes for the respective games to be indulged in on the day of the outing. A grand, good time is anticipated, and every member desiring to participate should at once apply for a ticket, or tickets, to either Mr. Traendly or Mr. Elliott. A very interesting souvenir program is being gotten up, and will soon be in the printer's hands. There is yet time for those wishing it to take advertising space in this pamphlet.

An appropriation of $25.00 was made to the house committee to supply refreshments at the meetings so long as the money lasted.

A discussion ensued as to the route to be traveled to the Milwaukee convention. Secretary Stewart, of the S. A. F., announced that the Western Passenger Association, covering points beyond Chicago, had granted a rate of fare and one-third on the certificate plan, and he expected to hear from the other traffic associations every day. Several of the members expressed a preference to travel by water, either from Buffalo or Grand Haven, but it having been pointed out that none of the lake companies would act with the railroad companies in the granting of a cheap rate, it was finally moved that the sense of the meeting be that the delegates travel by rail going by way of Chicago. This latter action was taken so as to afford those wishing it the opportunity of visiting some of the large plant-growing establishments in the vicinity of Chicago; and it may be that arrangements can be effected to permit of a stop-over at that city on the return journey, although this is not assured.

On motion of Mr. O'Mara, Theodore Lang was appointed captain to organize a bowling team to represent the club in the Milwaukee contest.

It was announced that the medals won at the late flower show in Madison Square Garden would be distributed this week.

There is a probability that the club will take a Summer vacation during the months of July and August.

San Francisco.

News Notes.

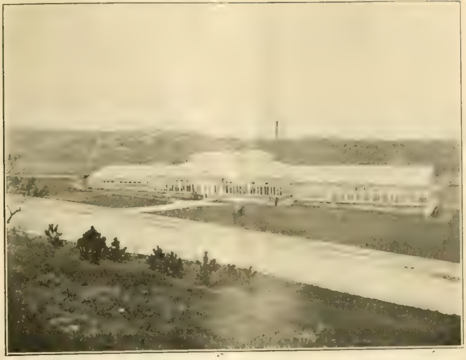
Thomas C. Holmes has become associated with Matraia & Bertrand, seedsmen and florists. Mr. Holmes has been in the trade the past seven years —five with a firm in Devon, England, and the last two years in Seattle with Lilly-Bogardus Co. and Woodland Park Floral Co., respectively.

Chas. Navalet & Bros., of San Jose, have now a branch store in Sacramento.

Within the current week, Elwood Cooper, of Santa Barbara, recently appointed State Horticultural Commissioner, visited the State capitol and took the oath of office, and announced his selection of Alexander Craw as assistant commissioner, with headquarters at San Francisco.

Thomas H. Stevenson, Powell street, the first week in May opened another store in the Palace Hotel. The same store was abandoned a few weeks ago by Sievers & Boland.

The Japanese nursery in Oakland, Cal., conducted by the Domoto Brothers., have bought 40 adjoining acres of land and purpose utilizing sixty thousand square feet of glass in the construction of new rose houses. ALVIN.



DISPLAY GREENHOUSE, EDEN PARK, CINCINNATI, O.

Greenhouse in Eden Park, Cincinnati

The new greenhouse at Eden Park, Cincinnati, O., an illustration of which is presented herewith, is constructed on the latest lines of cement foundations, pipe framework, cypress bars laid with Critchell Improved Rubber Strip for glazing, and the sides and ends are French single strength and plate glass. It makes a very splendid showing from the main driveway through the park. The house is lighted by electricity and will be kept open two or three nights of the week to the public. It is heated by steam, and connects with seven growing-houses 90 feet long and from 15 to 20 feet wide. The small houses are used for raising the plants for the park proper. The large house is divided into three sections—one for ferns and fancy stock; the center for large palms and show plants; the south end for the cooler house for azaleas, chrysanthemums and the general class of large plants that have to be housed in Winter. The house is 200x40 feet; the center house, 26 feet high; the wings 14 and 18 feet, respectively. G.

Saddle River, N. J.

John G. Esler was recently elected President of the Orvil Building and Loan Association for the fifteenth consecutive term, he having been the presiding officer since the inception of the association. Andrew Esler, of the firm of J. G. & A. Esler, was re-elected treasurer.

BUFFALO, N. Y.—Another large greenhouse is being added to the W. J. Palmer plant.

THIS WEEK'S SUPPLEMENT.

Manor House, Phelps Estate.

Our readers will, we are sure, be pleased with the illustration of the Manor house and grounds of the Phelps Estate, at Teaneck, N. J. We have illustrated several beautiful trees and landscape scenes on the estate, and now give the residence itself.

The present Manor house and home of Mrs. W. W. Phelps was purchased by the late Hon. Wm. Walter Phelps after the destruction of the old homestead by fire on April 1, 1888. Though at the time of purchase it was a place of meager appearance, it has by extensive alterations been turned into a very fine residence, standing in the middle of a beautiful lawn of nine acres

The two copper beeches seen in the foreground were planted in the places where they stand in 1876. They have attained a height of 36 feet 6 inches, and a spread of branches of 35 feet. The circumference, 1½ feet from the ground, measures 4 feet 4 inches. Such is the symmetrical, rounded form of the trees that they might aptly be called "ball-shaped."

In close proximity stands a beautiful crab-apple tree, 31 feet 9 inches high, with a spread of branches of 37 feet 6 inches.

There is always a time that the landscape gardener looks forward to with pleasure, which is when the picture in his mind at the time he plants a place is perfected; and we should say this time has now arrived for the one who planted here, Donald Matheson. What a beautiful place it is! Look at the grouping of the trees, the group on the right, especially, looking like a perfected belt of natural woods. The evergreen and the deciduous trees blend to form a perfect picture, and those off in the distance show the same character, and denote perfect health.

The vines about the porches and their appearance are well worth studying. Notice, in the first place, their thrifty look, then the way in which they are trained. There is no stiffness in their appearance. On the contrary, the graceful drooping of the upper shoots gives a pleasing appearance, as it conforms to the general character of the architecture of the dwelling. The little green along the base of the walls below the vines is another good feature—a dwelling always appearing to better advantage when springing from a base of green than when from bare ground.

The mass of trees on the left has the appearance of consisting of natural growths, or to have seen more years than the others. The trees afford a screen for the buildings and give shade in Summer, besides creating a more home-like condition of the whole, which trees always do.

The broad spread of lawn is a pleasing feature, much more so than it would be cut up with flower beds. Nothing is as good as a field of sloping green, such as this picture presents. Wherever the like is met with it excites admiration.

Taking it all in all, both the owner and the gardener have much to be proud of in this beautiful place.

JOSEPH MEEHAN.

Union Gardeners in Chicago.

The specter of the walking delegate and the labor agitator has invaded the aristocratic settlement on the shores of Lake Geneva. The Chicago millionaires who thought they had escaped the stress and turmoil of city life have been pursued to their sylvan retreats. They are in the midst of a labor controversy. It is all on account of the lawn mowers, gardeners and florists employed in the private parks. Last Winter, while the owners were away, 400 of these men organized. Demands have been made for the recognition of their union, and the matter is being agitated day by day. Many cottagers refuse to treat with the union, and all the familiar details of "ultimatums" and "sympathetic strikes" are being discussed around the lake. If agreements are not reached, some wealthy Chicagoans may have to mow their own lawns and weed their own onion patches, unless they conclude to stay away for the Summer.—Chicago Tribune.

About Trees.

Under the title "About Trees" the New York Times, in its issue of May 3, has a curiosity in the way of an editorial.

The writer of the article contends that there is general ignorance on the part of the public of what constitutes a good tree, enabling nurserymen to unload thousands of trees annually, which are but fit for hop poles. Popular knowledge on the subject of good trees and all relating to them is far behind what it is in Europe, especially France, the Times says. Further, it is asserted the people are willing to accept crooked, unshapely trees, and when purchasers complain, they are satisfied with the assurance that none better can be had. We are told that the proportion of good trees offered for sale from the nurseries of the United States is rarely larger than one in a hundred, and sometimes one in a thousand.

We quite agree with the Times writer that the selection of trees is a business which should not be intrusted to any one who has not qualified by a proper study of the subject. And we would add, that this is as true when applied to those who write for the press as to those who select trees. That the writer in question is not qualified to speak on the subject on which he treats is beyond question.

It is far from a fact that there is a general ignorance on the part of the public of what constitutes a good tree. So widespread is this knowledge that nurserymen could not pass off unfit or misshapen trees did they so desire. Instead of attempting this, all large nurseries burn up hundreds on hundreds of trees annually as against their interest to keep such for sale. Their brush heap is never bare of something to be burned. Furthermore, we could name two of the largest nurseries dealing in ornamental trees in this country in which men are continually employed doing nothing but pruning and shapening stock. This is done because of the demand for good trees—a demand which will not be satisfied with "hop poles." It is also strongly impressed on the salesman that a good business can only be built up by keeping steadily in mind the interest of the customer.

That popular knowledge on the subject of good trees and all relating to them in this country is far behind that of Europe is sheer nonsense. But very few of the people of Europe have a chance to own a tree of any kind; besides this, private and public grounds in this country are nearly altogether in charge of foreign-born gardeners, who have had the training the Times contends is necessary, and who give us the benefit of their knowledge.

Taking the parks and private gardens in the vicinity of many of our cities, examples of good taste, good trees and keen interest in all relating to horticulture are in evidence on every hand.

The general advance in horticultural taste in this country has been remarkably rapid of late years. Nurserymen know more about this than any one else, because of their experience with buyers. They tell us that the time was when the value of a tree was measured by its bulk, but that time has long since passed. It is now rarity, beauty, carefully cultivated stock and variety that count. The best talent the world affords in the way of gardeners and landscape gardeners is to be found in the midst of us, and it would indeed be strange, with the desire of our people for the best and the wealth to pay for it, were it true the conditions were as deplorable as the Times writer states they are.

Obituary

G. A. Hiehle.

G. A. Hiehle, of the firm of G. A. Hiehle & Son, Parkersburg, W. Va., died at his home on May 5, aged 55 years. Before coming to America, deceased had been employed in the Royal Botanical Gardens at Dresden and Vienna.

Jacob S. Williamson.

After a long illness, J. S. Williamson, at one time a leading florist and grower of roses in Memphis, Tenn., died Sunday, May 10. Mr. Williamson was a native of Memphis, and was connected with the leading families of the city. His father was at one time president of a local bank, and Mr. Williamson inherited ample means and a large plantation in the Mississippi Delta. His natural love of roses and other plants induced him to erect an extensive range of glass. He was successful in growing American Beauty roses for the home and St. Louis markets. Failing health (and being under no necessity financially to carry on the florist business) induced him to abandon it. His genial, kindly disposition, with his ardent love of all plant life and outdoor sports, made him popular with the entire trade.

C. H. H.

American Carnation Society.

VARIETY REGISTERED.

By John W. Foote, Malden, Mass.

RELIANCE, color a shade darker than that of Mrs. Thomas W. Lawson; strong calyx, seldom bursts; long stems, strong and wiry. Splendid keeper and shipper. A fine-shaped flower, the guard petals standing out well; in size about three inches. A good, thrifty grower, and an almost perpetual bloomer. ALBERT M. HERR,

Secretary.

Meeting of Board of Directors.

President George A. Rackham called a meeting of the board of directors for May 6. Wm. Scott, of Buffalo, and W. J. Vesey, of Fort Wayne, Ind., were the only directors present. The absent directors, however, had previously written the president giving their views on matters to be acted upon. All the correspondence was read, and the suggestions offered duly considered. A preliminary premium list was prepared, which will show some advantageous changes from the list of 1903. At least two papers will be read on timely and interesting subjects. A matter of much importance was the adoption of a system of staging, judging and making awards, similar to the plan used at the 1901 chrysanthemum show of the Detroit Florists' Club. A change was made in designating the different shades of pink, creating another division. The classes will be known as Lawson shade of pink, Scott shade of pink and Daybreak shade of pink. Provision will be made to admit the public to the exhibition subject to the arrangement of the local club.

The meeting adjourned to assemble again at Milwaukee during the S. A. F. convention, where, it is hoped, the full board of directors will be present, as several matters of much importance are to be considered and decided.

Chrysanthemum Society of America.

By invitation of the American Institute of the City of New York, the Chrysanthemum Society of America will hold its annual exhibition November 10, 11 and 12, 1903, in the "Armory of the Old Guard," corner of Broadway and Forty-ninth street. The schedule of premiums will be issued in the near future.

In addition to a large list and liberal prizes in the regular classes, there will be many special prizes offering great inducements to exhibitors.

A number of local horticultural societies will offer premiums to be competed for by their own members.

The Massachusetts Horticultural So- ty offers the following prizes to be npeted for by members of that so- ty:

For 25 blooms in 25 varieties, $25.00 d $15.00.

For 12 blooms in 12 varieties, $15.00 d $10.00.

Also $25.00 for the best vase of any variety—open to all.

The E. G. Hill Company offers $15.00 d $10.00 for the best 10 blooms of any edling, not in commerce, or foreign riety not disseminated in the United ates prior to January 1, 1903.

There will be many other special sses which will be announced later.

FRED H. LEMON, Secretary.

Floral Decorations in Parks.

Recently the New England Associa- n of Park Superintendents devoted e of its bulletins to a discussion of e subject of floral decorations in rks and village and city squares. All the gentlemen composing the mem- rship of this progressive association e men who have had long and varied perience in park making—men who and at the head of their profession America—and the verdict was unani- ous as to the efficacy and utility of wer gardens being established in our blic breathing spaces.

Perhaps Prospect Park, Brooklyn, Y., presents one of the best exam- es in the country where this style of rdening is carried out on an exten- e scale, to the great pleasure and light of thousands of appreciative itors.

The following remarks on the subject hand by Park Superintendent Wirth, Hartford, Conn., are worthy of heed: 'I do not advocate the establishing elaborate flower gardens in every rk in the country. On the contrary, m ready to acknowledge the very in- propriate location of some floral dis- ays as they exist in some of our parks -day, but I do wish to make a strong ea for floral displays in every city or lage with a park system, be it large small. Set aside for such purposes, e, two, or more parks or squares ich for various reasons are best apted for such displays, then combine your efforts to those few spots, and nfine your art to harmonious combi- tion of colors, artistic, graceful ouping and sensible, pleasing designs. not try to imitate the sculptor, nor tempt to scare the public with the phant. Leave that sort of fantastic tgrowth of floriculture to the mercy the floral decorator of picnic grounds d Summer resorts. . . .

'They (the people) will not only be ppy with what they will see in the rks, but they will go home, begin to y up their yards, and plant a few wers themselves; and in a very few ars the town will show the beneficial luence of our teachings, and our la- r and efforts will be lasting and of eat value to the community at large."

These statements are incontroverti- e, but the educational influence of ch plantings would be deepened, were common and botanical names of subjects employed, as far as prac- able, furnished on labels for the edi- ation of the public. This is done, in case of some of our larger parks, regards their trees, but neglected, ugh none the less necessary, so far flowering plants and shrubs are con- ned, in too many instances.

Reflections on Current Topics.

Mr. Editor: I observe in a contempo- ry a statement—and its appearance re causes me to doubt its accuracy o the effect that at the New York orist's Club's outing "John Birnie ers a volume of Burns' poems for e best bowler of the 'Press'—Job ex- ded." As I have stated before, I am great admirer of bowling—that is, to others sweat themselves at the me; but, alas, were I inclined to com- te in the coming contest, my obesity uld prevent my doing so; and there no time now to reduce my weight by sting, dieting, training, and other essary prior preparation. Did not tance preclude my presence at the ting, however, I should, in the alleys, ve sweltered in sweet contentment, ping my glass of milk—the potential tation of poets, press men and other artistic artisans—watching that game for a book which has been excluded from my library for good and sufficient reasons. John Birnie's embargo (if true) is therefore null and void, in my case; causes no ripple of resentment, or otherwise proves a disturbing element in my naturally calm career. I hope "J. Austin Shaw" wins that trophy, though—the book would suit him, I think.

It is a common belief among the ultra-erudite in floricultural and horticultural circles that our class literature is degenerating; and when, one by one, the more advanced periodicals pass out of existence, depravity in taste, or intellectual inferiority among American horticultural workers and readers is advanced as the reason why such publications died. And this sentiment finds its echo in the columns of contemporaries across the water, where a higher literary standard supposedly prevails and finds favor. I had occasion, recently, to glance over back numbers of some of our own trade papers, and I confess these offer good grounds for the view that both our writers and readers have become debilitated, evidenced by the feast at present provided, and its willing acceptance and consumption. Specialtyism, if I may use the term, has restricted the subjects treated upon by the trade press nowadays, and we rarely get beyond "roses, chrysanthemums and carnations," and these ad nauseam, with a host of what a friend of mine calls "old woman gossip" thrown in. But it seems to satisfy, so why rebel? and it pays the purveyors.

Yet the material supplied evidently has some worth. This I infer from a recent testimonial, in which a thankful mortal thus chronicles his indebtedness to the publisher of a trade periodical: "Your paper has been one of the chief means of my advancement in horticulture." Of course, the value or otherwise of that candid confession of help received depends upon the standard of progress reached by the testifier. But as there is joy in Paradise over one sinner that repenteth, so should we horticulturists of America rejoice that our maligned trade press has been the means of advancing one solitary member of the craft—no matter how short the distance—to a degree that wrings from him heartfelt peans of grateful acknowledgment. Henceforth, let us hold in greater contempt than ever the traducers of our trade papers.

What Our Advertisers Say 565

WHAT OUR ADVERTISERS SAY

Under this heading The Florists' Exchange will publish every week voluntary statements, each limited to fifty words, from its advertisers, calling attention to the main items offered weekly in their advertisements. The object is to assist our patrons.

The largest as well as the smallest advertiser is entitled to contribute.

Communications of this character must reach us *not later* than Wednesday morning.

The experiment is tentative, and we shall be guided by developments regarding its continuance.

Prices are not to be quoted.

On no account will matter of this kind be written up in this office.

Each advertiser must assume responsibility for the statements he makes.

Benjamin Connell, West Grove, Pa., calls special attention to his list of potted cannas, also dormant cannas; and carnations from soil and fit to plant; started caladiums, English and Japan ivy, geraniums, and Tritoma uvaria.

QUESTION BOX

Supposed Scale on Plum Tree.

(113) A. H.—The excrescences on the plum twig are not scale of any kind, but seem to have arisen from an exudation of the sap that has become hardened. If the branches so affected are pruned away, the tree would break away again, and probably be all right.

Horticultural Society of New York

The fourth annual meeting of the Horticultural Society of New York was held in the lecture hall of the Museum Building, Bronx Park, New York, on Wednesday afternoon, May 13. Previous to the regular meeting of the society the council convened, and decided to donate $150 to the Chrysanthemum Society of America in connection with its Fall exhibition, which is to be held in New York next November.

President James Wood occupied the chair. The report of Secretary Barron showed the society to be in a flourishing condition; two life members had been added during the year, and there was a balance of upwards of $800 in the treasury.

Aside from electing three new members to the council, the list of officers remains unchanged. The three new councilmen are: Edwin S. Marston, J. S. Holbrook, J. F. Johnson. These gentlemen will serve in the places of Addison Brown, J. De Wolf and Jas. W. Withers.

John K. M. L. Farquhar, of Boston, gave a most interesting talk on the "Flowers, Fields and Woods of Japan," illustrated with stereopticon views. Mr. Farquhar, in the course of his remarks, said that there were types of Japanese longiflorum lilies that had not yet been imported to this country—types much better than any we had yet seen here. One of his illustrations showed lilies that were fourteen inches long in the bud, and with foliage as fine as is that of Dracæna indivisa. The speaker also remarked that landscape work in this country that is done in accord with the canons of the Italian school, can never be wholly successful, owing to the tender subjects necessary to be employed in that style of landscape art. Let us, he said, follow the Japanese school of landscape art, and we shall be entirely successful. The climate of Japan is similar to our own, and the modes of arrangement in that Eastern country have reached the pinnacle of perfection. The speaker's plea for a taking up of the Japanese style of landscape work by our gardeners is certainly one that is worthy of consideration.

In conjunction with the meeting the annual exhibition of the society was held. The number of entries was hardly up to the usual standard. The prize of $50 for the best horticultural novelty in flower, plant, fruit or vegetable, brought out but two entries. These were a double sport of the Begonia Vernon, named B. Gertrudiana, shown by F. Weinberg, Woodside, L. I., and a plant of Phœnix Roebelenii, exhibited by Siebrecht & Son, New York, the latter subject winning the coveted prize. Siebrecht & Son also were the winners in each of the following classes: Group of crotons, group of palms and foliage plants, group of foliage and flowering plants, collections of ferns and second for collection of orchids.

The first for the latter class was won by Lager & Hurrell, Summit, N. J., who exhibited some forty varieties, including many choice kinds.

The Bedford Agassiz Association won the honors for collection of wild flowers.

L. A. Martin, gardener to Mr. W. H. S. Wood, Greenwich, Conn., was first for collection of flowering shrubs. This exhibit was a very comprehensive one, containing twenty-five different varieties of syringas and seventy-five sorts of other shrubs.

F. Weinberg was first for collection of succulents; Mrs. Pradcock, also of Woodside, L. I., being second.

A. special gratuity was awarded L. A. Martin for the exhibit of syringas, and a similar award was given G. Smith for peonies.

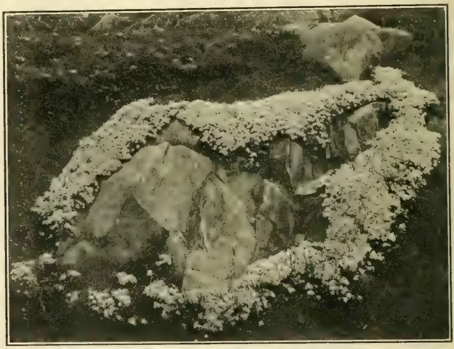
A first-class certificate and vote of thanks was awarded Mr. Roebling, Trenton, N. J., for Lælio-cattleya G. S. Ball, a new orange-colored variety.

ACHIMENES VERSCHAFFELTII.

Achimenes Verschaffeltii.

The achemines are not so extensively cultivated as their merits deserve. As will be seen from the accompanying illustration of A. Verschaffeltii, when properly treated they are excellent plants for hanging basket purposes. One very good feature they possess is that flowers are produced for several months without exertion.

The rhizomes should be started early in April. These may be started in flats, and when growth appears, as many as desired may be put into baskets. Any good fibrous loam, with a liberal mixture of leaf soil, will suit them. After flowering commences they should be fed occasionally with liquid manure.



PHLOX SUBULATA AT GREYSTONE, YONKERS, N. Y.

Phlox Subulata.

For early Spring flowering, Phlox subulata and its varieties are desirable subjects. Planted on dry, sunny banks, provided they get a fair amount of water in Summer, they make a brilliant show. The accompanying illustration is of a clump of Phlox subulata growing around a rock on a bank of the main drive at Greystone, Yonkers, N. Y. The plants were planted the Spring before the photograph was taken, and show how naturally they have begun to grow over the rock.

W. H. WAITE.

Storing Carnation Flowers.

In his valuable book, "The American Carnation," just published, the author, C. W. Ward, of Queens, N. Y., says, relative to the storing of cut carnation flowers: "The chief value of any flower consists in its being placed in the hands of the consumer in a fresh, lasting condition. This can only be accomplished by having the blooms properly handled from the time they are cut from the plant until delivered into the hands of the consuming purchaser. In order to accomplish this the flowers must be picked when in the proper condition, the stems immediately plunged in water, and the receptacle placed in a cooling room, which should be scrupulously clean, and in which the temperature is uniformly carried at from 45 to 55 degrees. The vases containing the flowers should be of sufficient size to avoid crowding or jamming the blooms together, and be deep enough to hold at least two-thirds to three-fourths of the entire length of the stem. These vases should be kept perfectly clean, and should be daily filled with fresh water. The temperature of the water in the vases may be from 10 to 15 degrees higher than the temperature of the room at the time the flowers are put into the vase. While the temperature of the cooling room should be from 48 to 50 degrees, we have found it beneficial when both the water and cool room stood at about 55 to 60 degrees when the flowers were put in and when the morning pick was finished the room gradually cooled down to 48 to 50 degrees. The water, room, and flowers cooling down together, avoids the sudden chilling of the blooms, a condition which sometimes causes them to wither, or, as the florist terms it, 'go to sleep.'"

A Cheap Idea.

The question of room at this season of the year is a serious problem to every florist, especially where it is necessary to handle quantities of bedding stock. There are, too, always some plants which are large enough to be moved outdoors if only room could be found. Your correspondent thinks that to alleviate the suffering of florist and plant, a cheap frame can be made, one similar to a hot bed frame; and in place of sash, a covering can be made from two by one inch pine sawed to make the frame the same size as the sash, and cover with factory cloth stretched tightly over it and tacked on all four sides. A brace will be necessary to strengthen the frame, also a small hook and eye (one at top and one at bottom) to prevent the wind carrying off the covering. Such protection is proof against light frosts, and if given slope enough will carry off heavy rains almost as good as sash. This is a hand place to put plants requiring to be hel back to save bloom; and the device ca be put together in almost any corne of the lot for a short time. Also th covering, once made, is very useful fo many things, such as covering seeds t prevent continual watering, and can ac as a protection from the hot sun t asters just transplanted, or newly repotted plants. Try it.

A. H. S.

The Pierson Fern.

Writing on the subject of the Pierso fern (Nephrolepis exaltata Piersoni), i the Gardeners' Chronicle, Chas. T. Druery, an English authority on ferns says: "We have here, undoubtedly, on of those marvelous breaks, which ar hardly likely to stop at this stage, i cultural selection be continued by sowing of the spores, instead of the growe being content with the easier propagation by stolons. The remarkably dens and foliose character of the variety i fairly sure to be correlated with som degree of barrenness as regards spores but it may be well to note that in th parallel cases of polystichum, althoug a superficial glance may fail to detec sporangia, a good lens may detect them not as sori, but singly. Already in th same genus we have one fine plumos variety, N. rufescens tripinnatifida which, however, varies in differen lines to this one, being cut like ou Welsh polypody, while N. e. Pierso is, apart from its dense and imbricat character, a sport with a thorough secondary division, which, judging fro parallel cases in British ferns, ma quite well go one and even two ste further, each one adding to the delica and beauty of the plant."

F. R. Pierson writes us on the subject of sterility of N. Piersoni as fo lows:

"The Pierson fern has the same cha acteristics in regard to barrenness, freedom of spores, as the Boston fer N. Piersoni will bear spores on t very old fronds if the plants becon hard and dry, but when growing free it shows the same tendency to sterili that the Boston fern does, and we ha found, as far as we have been able observe, that the two ferns are ide tical in this respect."

The competition for the contract wit Ogden City, Utah, to place a number flowers in the public parks of the cit has resulted in a division of the wor among the florists of the city. Th plants and bulbs are to be supplied b three different greenhouse men—Her dershot, Varney, and Porter—and t work of putting them in is to be dor by Merkle. Bulbs and plants to th amount of $200.00 are to be purchased

The Newport (R. I.) Horticultur Society will hold its fifth annual exh bition of roses, foliage plants, fruit etc., in Masonic Hall, June 23 and 2

PALM HOUSES OF C. C. POLLWORTH CO.

BRIEFS FOR BUSY FLORISTS.

DRACAENA INDIVISA.—The one-year-old plants can be got to good-sized decorative stock by next Fall, and need take up no room in the greenhouse during the Summer, if one has a piece of good garden land where they can be planted outdoors. They may be planted out as soon as all danger from frost is over, but before planting, have some well-rotted manure dug into the soil, and the latter in a perfectly friable condition, forking it over several times if necessary. Dracænas, when grown outdoors through the Summer, providing they have reasonable care and attention bestowed upon them, make far better and stronger plants than can be produced in the greenhouse, and they can be lifted and potted in September without the least injury.

COCOS WEDDELIANA.—There never seems to be too many plants of this little palm, when the season for filling fern dishes and jardinieres is on; and it is always advisable to grow a batch of them on through the Summer rather than wait until September or October before getting a supply for Winter.

A common mistake made when growing the cocos is that of overpotting, putting plants in 4-inch pots when they should only go into 2½ or 3-inch pots. Grow them in a house that is well shaded, though little effort need be made to keep them at all cool. Providing they get enough moisture at all times, a ninety-degree temperature through the day will not hurt them.

MARGUERITES.—If cuttings of these have not yet been made, no time should be lost in doing so. Should the propagating bed be too crowded just now, the cuttings from the marguerites can be put either into flats or pots, and they will root just as quickly. After they are rooted, they must be potted along and kept right through the season, stopping them at times if necessary in order to have strong, bushy plants when the flowering period arrives. Although they make good plants when set outdoors through the Summer and lifted and potted at the approach of Autumn, the check they receive at lifting seems to impair their blooming qualities a great deal, and it is advisable to grow them in the pots right through, feeding them liberally when the roots begin to get crowded after they have reached the flowering sized pots.

Couldn't Deceive Him.

"I want to get some bird seed," said the customer in the seed store.

"No, ye don't, smarty," replied the new clerk, recently acquired from the country, "ye can't joke me. Birds grow from eggs, not seeds."—Philadelphia Press.

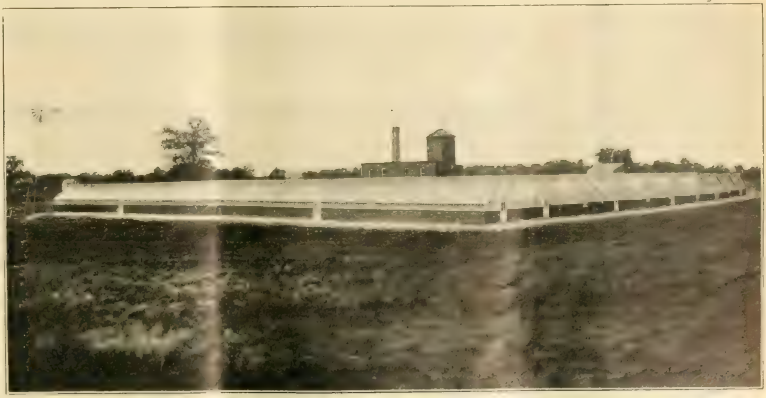
C. C. Pollworth Co., Milwaukee.

We present herewith portraits of the officers of the C. C. Pollworth Co., of Milwaukee, together with illustrations showing the firm's palm house, recently added rose range and new store.

C. C. Pollworth, the president of the company, is well known as the genial and energetic vice-president of the Society of American Florists, and the president of the local florists' club. Joseph E. Pollworth, his brother, is secretary and treasurer of the firm, and Wm. A. Kennedy, vice-president and superintendent of the greenhouse establishment.

In 1901 the company purchased the Deuster greenhouses at Milwaukee, and as the interests of the growing trade demanded, have gradually added year by year until now they have probably the largest greenhouse range in the district. The new store in the city into which the firm is moving affords much larger capacity for the handling of the extensive business conducted in florists' supplies of all kinds. This firm also does a wholesale cut flower commission business, several of the largest growers in the locality shipping their stock there.

All the members are greatly interested in the success of the coming convention of the S. A. F., which, Mr. Pollworth says, promises to be a record-breaker.



C. C. POLLWORTH CO.'S NEW RANGE OF ROSE HOUSES.

The AMERICAN CARNATION

HOW TO GROW IT

By C. W. WARD

READY

All Orders Filled on Day of Receipt

This magnificent volume contains 300 pages of the most valuable and instructive information on the subject of Carnation Culture ever presented. Every carnationist needs a copy; every grower should have a copy. Handsomely printed in clear large type on elegant wood-cut paper. The illustrations are from life and are of an unusually high order of excellence. Order at once, or send 2-cent stamp for sample pages giving synopsis of contents, index, list of illustrations, etc.

Price $3.50 CARRIAGE PAID

2 Duane Street—**PUBLISHERS**—NEW YORK

Review of the Market

NEW YORK.—The cut flower trade of this city is in a very demoralized condition. There have been times in previous years when business was poor during the month of May, but we do not recollect ever seeing the flower market so completely at a standstill this month as it is at the present time. So far as market prices go, it is a difficult matter to get a line on these. There is such a large surplus of every commodity left over each day, which is released to speculators at extremely low figures, or else thrown away, that the average returns must naturally at this time be at variance with any quoted figures. Straight slips of Bride and Bridesmaid roses have sold at $5.00 per 1000; and fancy carnations have been offered almost at the same figures. Unfortunately there have not been buyers enough to clear out the stock at these figures, and many good flowers have eventually been consigned to the rubbish receptacle.

We have had no rain here since Easter Sunday, and the want of it is beginning to be felt by carnation growers and others. Still, the outdoor flowers do not seem to have been seriously affected by the five weeks' drought. Iris have begun to arrive, as also have viburnums and peonies. Lilac is plentiful, and has been selling at any price whatever; some at 5c. a bunch, others at three times that figure, all depending upon the quantity of stock purchased. In sweet peas, also, there is a long range in values; some go at 2c., some at 8c. a bunch, and many flowers are cast away for the lack of buyers. It must also be understood with reference to the sweet peas that the quality is of as wide a range as the values received for the flowers.

Ordinary grades of carnations are out of the running entirely. With the long-stemmed fancy flowers going at the prices aforementioned, there is no outlet for the commoner ones, and the ashman has the final handling of them, in most instances.

Lilies have an outside value of 4c.; lily of the valley, from frames, is bringing about 50c. a 100, when sold, and the outdoor crop, for the most part, withers away while in the hands of the dealers, there being no demand for it.

Tulips and narcissus are not much in evidence, and it is just as well so.

BOSTON.—Trade during the past week has assumed almost the Midsummer standard. There has been no market for either roses or carnations, and even sweet peas, which have been selling well right along, took a big slump this week. Roses and carnations are now going at the buyers' prices, and no fair offer is refused. American Beauty of extra grade make $2.00 per dozen, with the smaller stock bringing $8.00 to $10.00 per 100, and culls $1.00 to $1.50. Best grades of Bride and Bridesmaid are freely offered at $5.00 and $6.00 per 100, with the medium and smaller ones at from $4.00 down to 50c. per 100. All other roses are correspondingly cheap.

Carnations, too, are cleaned out at any price, and much very fine stock is sold at $1.00 per 100, with inferior flowers at 25c. to 50c. A limited supply of fancy stock reaches $2.00 and $3.00 per 100, but when bought in quantities these prices are shaded considerably.

First quality sweet peas are now freely offered at 50c. per 100, though a few fancies will average a little better, and many of the inferior ones make but 35c.

Marguerites, yellow and white, sell fairly well; as do pansies. Outdoor tulips are now numerous, but move Slowly at $1.50 and $2.00 per 100. Stocks, antirrhinum and such are coming in fast, but sell slowly.

F. J. N.

ROCHESTER, N. Y.—Business in this town is moving in a satisfactory manner. Carnations are now becoming more plentiful as the fine weather approaches, and good quality is the order. Mrs. Frances Joost and The Marquis are showing up fine, while Peru, Flora Hill, and Queen Louise are in constant demand. One fault, seemingly, of The Marquis is that red spider sticks to it like glue, making the foliage and calyx yellow and far from handsome. The stores are busy with funeral work, and handling early bedding plants, the demand for which is constantly growing.

The wholesale men certainly have their hands full, and all report the prospects for Spring trade as exceptional. There will be a noticeable shortage in many varieties of plants, especially geraniums, one firm alone lacking 6,000 of last year's supply. Owing to the hard freeze of May 2, many carnation plants, recently planted, received a severe check, a large number being frozen, as well as cut by the wind. We have hopes that they will break from the lower eyes, but a severe loss at this time will make itself felt later.

A. H. SECKER.

CHICAGO.—Spring has come on us with a rush. From freezing weather we are now enjoying regular Summer days. This has caused trade to suffer, and at present we are right in the midst of our first great glut of cut flowers of this season. Roses and carnations are in by the thousands and are hard to move at any price; especially is this true of the tea roses. Any number of these are offered at the buyers' own figures.

Good shipping stock has held up remarkably well, and is selling at a fair price. First-class carnations are still bringing good values, and some superior stock is now coming in. Extra good Prosperity are selling as high as $5.00 per 100. American Beauty roses are going well, considering the glut of other stock.

Not a great many outdoor flowers are coming in, although the warm spell may change this condition. There has been no lilac to speak of in the market as yet, the recent cold weather having a tendency to hold it back, and no great quantity having been received from Southern points.

Kennicott Bros., of Carbondale, have begun to harvest their annual crop of peonies and some good pink and white flowers are on the market, and selling fairly well. Klehm's Nurseries are sending in some fine yellow tulips that are bringing a good price for outdoor-grown stock. Lily of the valley, from outside, does not sell at all, and the indoor-grown stock is hard to move at any price.

Spring plant trade with the seed stores has opened up with a rush the past week. Vaughan's Seed Store has been very busy. Although about two weeks later than last year, from appearances the trade will be as large, if it does not exceed that of former years.

R. J.

ST. LOUIS.—The opening of this week augurs well for warmer weather. Business continues rather quiet and the large supply of cut flowers at the wholesale houses is still noted. The retailers are only buying a limited quantity of stock for their daily supply. Last week a number of large funerals used up a lot of white flowers, but colored stock was left unnoticed. The rose market is very much overstocked. Plenty of long American Beauty are to be had at cheap prices, and the very choicest can be bought at $3.00 per dozen, from that down to short ones as low as $2.00 per 100. Bride and Bridesmaid are in good supply, but moving rather slowly at prices ranging from $1.00 to $5.00 per 100. Some good Kaiserin Augusta Victoria are coming in, with some demand at $4.00 per 100. Liberty have very short stems, but fairly good flower, selling at $2.00 and $3.00 per 100. Perle des Jardins do not sell well at this time of the year; they come in too soft when the weather is warm. Golden Gate suffer in demand on account of lack of foliage. The blooms are fine and the stems good, but the poor foliage is against the variety as a cut flower.

Carnations in all varieties are very plentiful and $2.00 is a big price for them by the hundred; a few specials bring 50c. more; $10.00 is a fair price in thousand lots. Some, I hear, were even sold cheaper than that. In white, Flora Hill is the most sought now, owing to its keeping quality; in pink, Mrs. Lawson; and red, G. H. Crane. Daybreak is in fine condition and is always a good seller, as it can be used for most any kind of work. Frank Fillmore's Flora Hill are the best in this market at present. The best home-grown stock of most all kinds comes from The St. Louis Carnation Co. Peonies are now coming in, but are as yet not over plentiful; they are selling at $5.00 per 100, with a good demand.

Harrisii lilies and callas, lily of the valley and a few tulips are coming in. Lilies were badly in overstock the past week, but the supply has let up somewhat, with a little better demand. Outdoor lily of the valley does not sell well. Sweet peas are in favor and meet with a lively demand, cleaning up pretty well daily at 50c. and 75c. per 100. Frank Ellis shipped a big lot of sweet peas the past week, as many as 10,000 to one party.

All green goods are selling fairly well. Smilax is still scarce and only a limited number of strings can be had. Dagger ferns are in, and take the place of fancy ferns, which are a little scarce. ST. P.

CLEVELAND.—The market the past week has been rather dull, and the increased cut has caused a glut in some lines. Roses especially have suffered and at times good ones could be had at $10.00 per 1000, although the market prices are $3.00 to $5.00 per 100 for teas. Carnations are holding out well and most all grades of this stock are in demand, the price being $2.50 to $3.00 per 100. Some good longiflorum lilies are seen and readily bring from $12.50 to $15.00 per 100. Outside lily of the valley has made its appearance, but not in quantity. Lilacs are plentiful and in fair demand. Sweet peas are very scarce, and bringing good prices. Common ferns are difficult to obtain and the price has gone up to $2.00 per 1000. Good Boston ferns are in great demand, and as most stocks are sold out, prices are going up. This fern is about the only item in the plant line that is really scarce.

G. W. S.

CINCINNATI.—Warm weather and plenty of sunshine is what we are getting at this time. Stock is now rolling in, and first ear-marks of a glut are now with us. Prices have declined rapidly and it is now a question of disposing of the stock at some figure, without regard to value. Memorial Day is likely to find the market very much reversed, and with stock scarce; but, of course, there are things over which we have no control. Business is very much on the quiet side with all the store men.

E. G. G.

PHILADELPHIA.—This week there is an abundance of all kinds of cut flowers; everything is in excess of the demand. Yet conditions are not nearly so bad as we have seen at this time of year, for much of the stock is moving fairly well; of course, at low prices. In fact in many things the price is the buyer's offer, it being difficult to obtain any set figure after the very choice stock is gone.

Roses, especially American Beauty, are not quite so abundant as they were last week.

Sweet peas can now be had in all colors. Much of the stock is poor, being short in stem and with no foliage.

Carnations are a complete glut and moving very slowly. From present indications the streets will be lively with flower sellers on Saturday, as even now much stock is being sold at $5.00 per 1000. Some dealers hold out for more, but the majority contend it is better to move the stock than let it accumulate.

Peonies are coming in in quantities and selling fairly well; so far, the early dark red is the principal variety.

All kinds of flowers are certainly of much better quality than usually seen at this time of year. This is no doubt accounted for by the cool nights. A few roses show that the fires are out. Many growers claim this is a mistake. Keep the chill off the houses, as there is some business yet in sight for another six weeks at least.

DAVID RUST.

PITTSBURG.—The weather has been fair and warm during the past week, but rain is badly needed for young stock that is placed out. The bedding plant growers are out in force filling up all available space around the markets with plants of good quality, which are selling fairly well at about last year's prices. Geraniums and cannas are most in demand. Boston ferns sell remarkably well; good-sized plants were scarce for some months, only a few growers having much stock.

In the cut flower line things have been rather slow; too much stock has accumulated and prices were changeable. Not much change is expected until toward Memorial Day. Stock is of a fair quality. In roses, Queen of Edgely and American Beauty seem abundant.

W. F. Kasting, of Buffalo, N. Y., spent a few days in the city; Geo. Huscroft, of Steubenville, Ohio, was also in town.

E. C. R.

ST. PAUL.—The Spring here is one of the most backward on record. Cold, damp weather has retarded all growth, and at this writing (May 12) the trees are not yet in full leaf. However discouraging this may appear, there is hope in the thought that little or no damage has been wrought to fruit and outside vegetation, such as is reported from other less favored sections.

Notwithstanding these adverse conditions, trade has been fairly good. Cut flowers have been in demand for funeral purposes, while the season for planting seeds, bulbs, hardy stock, perennials, etc., has been long drawn out and very good. Stock is becoming more plentiful each day, a few hours of sunshine now and then seeming to bring out a great abundance of bloom. A great many flowers, however, are short-stemmed and second class. Strictly first-class, high-grade stock is not plentiful. Carnations all seem to be "off crop" and have been for several weeks.

The trade in bedding plants has not yet begun. The growers all have good stocks, and when trade does open a good demand is anticipated. Swanson is still cutting lots of tulips and other bulbous stock, and his store is at all times a blaze of color.

L. L. May & Co. have had a fine trade in seeds and plants in connection with their cut flower business, employing extra clerks to wait on their customers.

The Ladies' Auxiliary, which conducted the flower show so successfully last season, has decided to hold another exhibition this year, November 10 to 13. A. S. Swanson and E. F. Lemke have been appointed a committee to arrange the premium list, which will aggregate $500.00 or more, and everyone is requested to help the good work along. Mrs. H. P. Moss, 313 Laurel avenue, is the secretary, to whom applications for space, entry blanks, etc., should be made.

VERITAS.

INDIANAPOLIS, IND.—Prices [illegible] kept up steadily, but still cannot get rid of the enormous supply of roses, carnations, etc., now at hand. Bride and Bridesmaid, second and short [illegible] can be had in unlimited numbers at the buyers' price, 1c. to 5c. is the wholesale figure for No. 1 Bridesmaid, Bride and Sunrise, [illegible] to $1.00 is obtained for them at retail. Liberty sell at [illegible] to [illegible] with but a very limited demand. American Beauty are still going slowly. They vary in price from $2.00 to [illegible] per 100; at retail they sell from $2.00 to [illegible] per dozen. Even at the above low prices many of them are consigned to the waste heap. Good carnations sell wholesale at $1.00 to $2.00 per 100, second grade stock may be had for 75c. or $1.00, [illegible] is the average retail price. Sweet peas are very plentiful at 75c. to $1.00 per 100 wholesale. They are put up in bunches of twenty five, which sell for a quarter. Pink peas are more plentiful and cheaper than white ones. Violets are still on the market; quite a few have been used in funeral work lately.

Bedding stock of all kinds is selling exceedingly well; 5-inch red geraniums at $1.50 per dozen, retail, in large numbers, 4-inch moon and cobaea vines at $2.00 per dozen are also in strong demand. Four-inch salvias are quoted at $1.50 per dozen; 5-inch at $2.00 per dozen; cannas and caladiums in 6-inch pots sell at $2.50 per dozen. So many of the growers are so absorbed in growing carnations, etc., for the wholesale market that plants are nearly forgotten about till planting time arrives, with the usual shortage in all kinds of bedding material.

I. B.

Philadelphia.

News of the Week.

Business in bedding plants is now starting up better, but large growers report that orders are mostly small. Blocks of plants are not yet moving right; many growers cannot get their plants in bloom properly. Several geraniums are very backward.

C. Eisele is now doing a good business shipping small plants. He has a large stock, among it many things very useful for growing on, such as clematis of all the popular varieties, bouvardias in all colors, ivies, abutilons, carnations, etc. He also grows a large quantity of bedding plants and climbing vines such as moonvines, cobæas, etc. Among the large stock was noticed a very good dwarf double nasturtiam, with flowers about ¾-inch in diameter, of a lemon yellow color. The plants are of sturdy growth and bloom freely all Summer. Another novelty from Germany is named in German, "four-leaved clover," but this is an oxalis, producing from a bulb stalks with four leaves and also bearing small pink flowers. It is a novelty, and as such should find ready sale.

The committee to select a bowling team to go to Milwaukee has had two meetings. So far the plan outlined is to have 21 games, 18 of these to be played on neutral alleys, the last three on the home alleys, each contestant winning a place to have one point per game; ties for seventh place to have half a point. The first game will start June 3, provided the club approves of the plan at its meeting on June 2.

Edwin Lonsdale and Wm. K. Harris are both cutting and sending in good peonies.

Leo Niessen is receiving some splendid tulips from Jurgens, of Newport, R. I. One, a clear yellow, is very good and sells well.

Thomas Foulds brings to the Flower Market a quantity of double white petunias. Some of the flowers measure three inches in diameter. They sell quickly for funeral work. The variety is a seedling of his own raising.

DAVID RUST.

Birmingham, Ala.

At a recent meeting of the stockholders of the Lindsay Floral Company William M. Lindsay was elected president and general manager, and T. Byron, superintendent of the gas department of the Birmingham Railway, Light and Power Company, was elected secretary-treasurer. Two and a half acres under glass will be devoted to growing cut flowers and decorative plants.

TOBACCO POWDER
THE BLACK STUFF FINE—For Sprinkling Only.
WHEN you cannot fumigate with our Fumigating Powder you can apply our Black Stuff Fine direct to the plants; it is strong and equally effective in doors or out for exterminat[illegible] all plant pests. Your money back if it is unsatisfactory. Trial 5-pound package for [illegible] you will pay the express charges on it. Write Dept. B. THE H. A. STOOTHOFF CO., 116, 117, 118 West Street, New York.

COLEUS Verschaffeltii, Golden Bedder and other good sorts, fine plants, no cuttings have been removed, from 2½ in. pots, $2.00 per 100 $17.00 per 1000. 100 **Begonia Vernon**, 2½ in. pots, in bloom, $2.00.

Detroit.

ıb Meeting.

The last meeting of the club was d on Wednesday, May 6, and was nost enjoyable one, for we had with Messrs. Scott and Vesey, who were re for the meeting of the board of ectors of the American Carnation Soty.

ne of the good things decided most thusiastically was to extend an in-ation to all the Eastern delegates o can avail themselves of the oppor-ity to join us from here on their y to the Milwaukee convention. The st of the trains from the East are in the morning, and the delegates ıld spend the day with us and leave re on the Grand Trunk at 5 p.m. for and Haven, then take the boat at 11 n., arriving in Milwaukee at 6 a.m. Tuesday. The Grand Trunk is the ly railroad running boats across Lake chigan (the Crosby line, consisting five steamers), thus doing away with long, dusty car ride by way of Chigo, and also giving our local men the asure of a day's visit with the travrs.

After the business was finished ssrs. Scott and Vesey entertained the ıb, as only they can; and now when meet one of the boys he will smile d if asked "What are you smiling ?" his reply is, "Oh, one of Scott's ries;" or "Judge Vesey's dignity." ay we have many more such visits is wish of RAG.

Montclair, N. J.

. D. Rose has been confined to his m by a serious cold, but has directed business from his sick bed. The mand for white carnations has been excess of his cut. The new house, 18 feet, will be ready for benching a few weeks. He had a prosperous ster trade, and is competing now for e landscape work for which Montir has been so prominent.

. Carswell, formerly foreman for A. Rose, now superintendent for Mrs. H. Houstar, Philadelphia, is the oud papa of a nine-pound baby boy. ther and child are doing well.

A social event, in the double wedding the Misses Armitage at St. Luke's urch, attracted attention by the steful decorations of A. S. Wallace. e church, of cruciform shape, has the oir screen quite up to the trancept. bank of short palms concealed the ver woodwork, the sides of the enance receiving treatment only of clus-s of Lilium Harrisii with long white bon streamers. The altar was a mass Lilium Harrisii, with a background tall palms; and as viewed through e choir screen over the foreground of orter palms, was very effective.

J. B. D.

Tarrytown, N. Y

The regular meeting of the Tarry-wn Horticultural Society was held on ril 30, President David McFarlane in e chair. The following were proposed r active membership: Alex. McLenn, Scarborough; James Taxter, Glenle; John Dervan, Glenwood; and A. Minnerly, Tarrytown.

Mr. Scott's prize was awarded to ward Nichols, of Glenwood, for two ts of calceolarias. James Smith, of hite Plains, received honorable menn for a vase of Heuchera alba; and seph Bradley a similar award for a se of Tritonia Crookeri.

The rose and strawberry show will be ld in the Lyceum, July 11, and will be e to all. Mrs. L. A. Martin, of Greench, donates a very handsome combition writing tablet and album as a ize for this exhibition. H. J. R.

"THRIPSCIDE"
(REGISTERED)
GREENHOUSE FUMIGATING POWDER
is the newest and best article on the market to day for the complete destruction of all insects that infest Greenhouses or Conservatories, being a special boon to Rose and Beauty growers and prepared particularly for the destruction of **Green Fly** and **Thrips.** There is nothing injurious in it to plant life, even the most delicate fern. It is especially recommended for Beauties, Roses, Carnations, Chrysanthemums, Lilies, Smilax, Asparagus Palms, Ferns, etc., and we claim that insects will be entirely eradicated when the houses are thoroughly fumigated with this powder. It is put up as follows:
1 lb. Tin Can ...$0.25 | 25 lb. Sealed Box $4.50
5 " " ... 1.00 | 100 " " " 10.50

DECORATION DAY

FROM

75,000 Carnations, 30,000 Spiræas, 25,000 Stocks,
50,000 Roses, INCLUDING 5,000 AMERICAN BEAUTY.

WE can ship you better quality flowers for less money than you can obtain if you come to Boston to purchase them, besides saving you the time and expense.

We filled all orders sent us at Easter, to the entire satisfaction of our patrons.

ORDERS going a long distance will be carefully packed in wooden boxes. There is no question about the quality of flowers we send out; they are raised by the most successful growers in the country and always prove profitable to those who purchase them.

Chicago.

News.

Carnation growers are busy plant- ut their carnations in the field; a many have the work well under or finished. The number planted exceed that of any former year by at many thousands.

the large rose growers are busy nting their rose houses. Wietor will start this week to plant in new range, which is nearly com- d. The same firm will soon begin rection of five houses, each 30x265 for carnations exclusively. They mplate housing the coming Fall 0 carnation plants.

H. Randall has the alterations in ew store nearly completed. He is ing a cosy office, and will have one he neatest arranged stores in the

e firm of McKellar & Winterson, esale florists, was dissolved May 03, Mr. McKellar having sold out ntire interest in the concern to E. 'interson, who assumes all the lia- es of the old firm, and will con- the business formerly conducted t as its successor. All accounts g to the firm of McKellar & Win- n should be made payable to Ed- F. Winterson, who bespeaks for elf the same liberal patronage that extended to the late firm.

sitors in town included Mr. Hud- of the Huddart Floral Co., Salt City, Utah; A. H. Philpot, Win- g, Manitoba; Harry S. Gentle, of Twin City Floral Co., Benton Har- Mich. ROBERT JOHNSTONE.

St. Louis.

Notes.

Our wholesalers complained some- t when they read in the St. Louis s in the last issue of your Chicago emporary, The American Florist, he big business done in this city cation week, of their selling out n, and of the florists never closing It was agreed among the whole- rs to close on Thursday, and most he downtown retailers also closed. se who did keep open had nothing lo. They claim the only correct s of the trade of Dedication Week recorded in The Florists' Ex- nge and The Florists' Review and n to be set right with their con- ors in regard to business and clos- on Thursday of Dedication Week.

as Dauerheim, son of one of our paper dealers, has bought out Tom son's place at Kimmswick. Mr. erheim will build four new houses Summer, for carnations. Mr. Wil- the former proprietor, has been ged as manager of the place, and grow for the St. Louis market.

W. Maas, who is with the Plant Co., in the retail department, re- s that the company's business is heavy so far this season.

me very extensive planting is going e done in the parks this season— e than ever before, especially in st and other large parks. The superintendent, whoever he may will have his hands full from the t. The new commissioner will take office on next Monday and then we know who the new superintendent be.

essen Floral Co. furnished some of swell decorations at the Planters' el the past week. The firm reports rge share of funeral work. ST. P.

Indianapolis, Ind.

Notes.

The florists in the vicinity of vn Hill Cemetery are exceedingly these days. Messrs. Pahud and edlein report the largest cemetery ness in years. It will keep them until the 30th looking after stands, s, etc.

hn Bertermann has been at Ander- Ind., helping J. A. E. Haugh judge rations which were put up for the A. R. week.

ank Soult, one of the popular mar- men, is the father of a baby boy. her and son are doing well. I. B.

Louisville, Ky.

iss Josie Schuh, who for many s was connected with the retail st business of Louisville, and for past ten years had been with F. ker & Co., died on May 10. She widely known among the craft popular with the public. The sin- sympathy of the florists is ex- led to the bereaved mother, brothers sisters. A. R. B.

Cincinnati.

News of the Week.

Richard Witterstætter was married Thursday evening, May 7, to Miss Marie Louise Dinkelinker. The happy couple left on the evening train for Chicago for a short honeymoon trip. The best wishes of the craft are extended to Dick and his fair bride.

H. M. Altick, of Dayton, O., was a caller during the week. J. R. Goldman, of Middletown, O., was also a caller. He will leave for California in the near future to try and regain his health.

At a stated meeting of the Cincinnati Florists' Society, held Saturday evening, nominations were made for a new board of directors to be elected at the annual meeting in June. Personally I should like to see an entirely new board elected, and from the younger timber in the club. I believe they would work harder than the old fellows that have held the offices year in and year out.

The morning papers state that Wm. Turner, lately discharged from the city parks, has been reinstated.

Ed Fries, of Newport, Ky., son of John Fries, was severely injured Sunday morning by his head coming in contact with a coal chute while hurrying through the boiler shed. His scalp was badly cut, requiring ten stitches. He was unconscious when found and the doctors had him on the table for over two hours dressing his wounds. At present writing he is able to be around, though still suffering pain.

E. G. GILLETT.

Cleveland.

News Jottings.

The past week has changed the weather conditions from the most disagreeable wet and cold to the finest kind of Spring days, and while it seems pleasant, it has a telling effect on stock. The quality has greatly depreciated, while the quantity surpasses the demand by a long ways. Most all our growers have finished planting carnations, but we need rain. In some places growers have had to water plants to keep them from dying.

The plant trade has not started in as yet; it is a little too early, as we can expect killing frosts until the 20th of this month.

A trip among the different growers shows that Spring plants are not as much in evidence as in former years. Those who are fortunate enough to have a good supply should remember what they paid for coal the past Winter, and then place the price in harmony with the cost of production.

Pansies seem a drug on this market, and the price, in some cases, has dropped as low as 15c. per dozen, basket included.

A. L. Vaughan, with E. H. Hunt, of Chicago, was a caller the past week.

G. W. S.

Buffalo.

Jottings.

Pleasant weather seems almost to make quiet business in the stores, as matters are but simply holding their own. Roses particularly have become plentiful, being in cases offered a bit freely at bargain prices. Some mildew is also seen.

Byrne & Slattery had the decoration for the banquet given under the auspices of the Buffalo Merchants' Exchange on Friday night last, in "greater canal" interests, at Ellicott Square club rooms.

W. F. Kasting visited Pittsburg last week.

C. S. Ford, of Philadelphia, called on Tuesday. VIDI.

Orange, N. J.

Society News.

The regular meeting and floral display of the New Jersey Horticultural Society was held at its rooms in Orange on May 6. Particular attention was attracted by the Cattleya Mossiæ of J. M. W. Kitchen, which were of great size and beauty. A. D. Rose, who was to have addressed the Society, was prevented by illness, and Dr. Kitchen spoke upon "Freaks of Nature in Plants."

Two new members were elected, and appropriate resolutions of sympathy ordered sent to the families of deceased members, James Withers and Henry Bird.

Considerable activity has been shown among residents of Llewellyn Park in landscape work: upon "the ramble," a section used by all the residents in common and the only portion open, with the drives, to the public; by Richard Colgate, upon Glen avenue at its intersection with Parkway, in the grouping of shrubs, carried out by Mr. Vance. At the spring, by the entrance to the park, O. D. Munn has donated a fountain, which has received an appropriate setting of dwarf evergreens and a marble seat and vase, at the hands of John Hayes.

It is hoped that the effort, the first new work in many years upon this portion of the park, will be followed by others at the hands of our wealthy residents who have hitherto confined themselves to their own grounds.

The rigors of Winter have been but lightly felt in this section and vegetation has not suffered perceptibly. Peter Duff has lost an entire bed of tulip-bordering, at "Brighthurst," through the ravages of mice, however.

J. B. D.

SARATOGA SPRINGS, N. Y.—John Ralph's greenhouse was slightly damaged by fire on Thursday night, May 7.

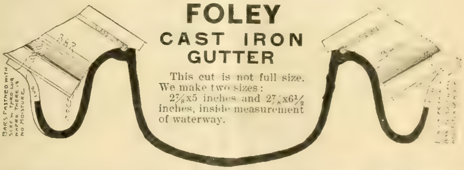
Write for our Free New Catalogue.

FOLEY
CAST IRON
GUTTER

This cut is not full size. We make two sizes: 2⅞x5 inches and 2⅞x6½ inches, inside measurement of waterway.



No rotting at the ends of bars. The end wood is not punctured. Bars always have perfect bearing, and the drip falls free into drip conductor.

Your bars will last five years longer than on old style gutters. The lugs through which the screw fastens the bar are cast on the gutter.

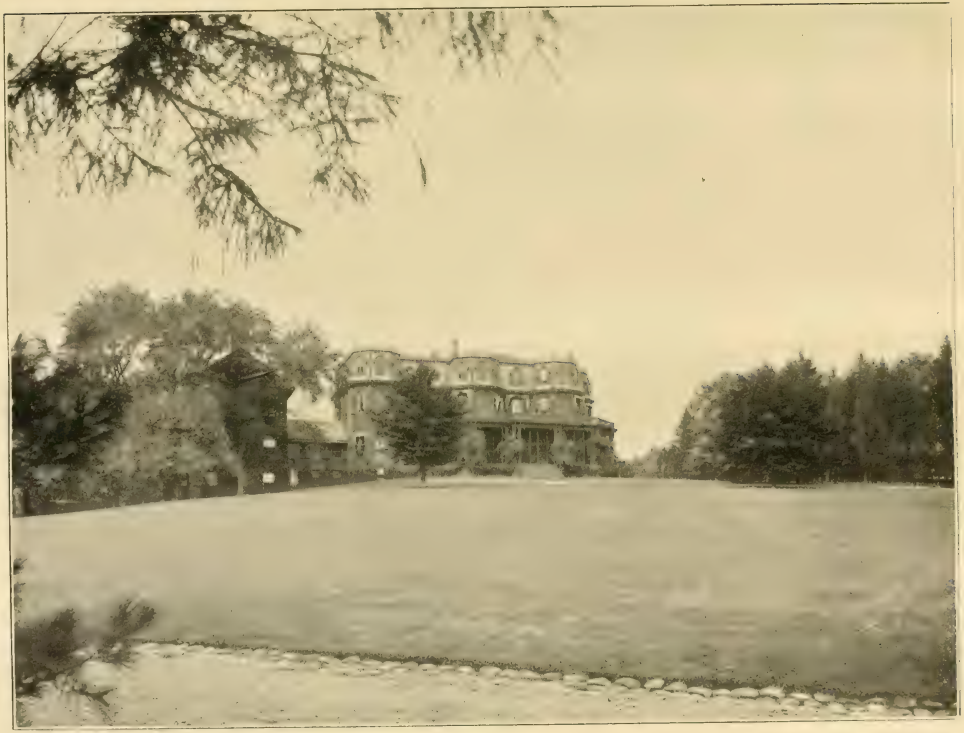
Our Gallery of Fine Specimens



Copyrighted, 1903, by A. T. De La Mare Ptg. and Pub. Co. Ltd., New York.

Plate 52

THE MANOR HOUSE ON THE W. WALTER PHELPS ESTATE, TEANECK, N. J.

Standing in the middle of a beautiful lawn of nine acres. The evergreen and deciduous trees blend to form a perfect picture. The two copper beeches seen in the foreground, noble specimens, were planted in 1876, and have attained a height of 36½ feet, with a spread of branches of 35 feet.
